Higgs exotic decays at e^+e^- Higgs factories

Tuesday 30 July 2019 15:08 (22 minutes)

New physics may well be linked to the SM sector via the Higgs portal. Hence the Higgs boson property measurements, including precision as well as exotic decays may provide new insight into the BSM physics. In this talk, I will discuss the Higgs width measurement through new interference effect and Higgs exotic decay sensitivities at future e^+e^- collider Higgs factories.
