## **Progress on Muon Ionization Cooling Demonstration with MICE**

*Wednesday, 31 July 2019 17:00 (20 minutes)*

The Muon Ionization Cooling Experiment (MICE) at RAL has collected extensive data to study the ionization cooling of muons. Several million individual particle tracks have been recorded passing through a series of focusing magnets in a number of different configurations and a liquid hydrogen or lithium hydride absorber. Measurement of the tracks upstream and downstream of the absorber has shown the expected effects of the 4D emittance reduction. Further studies are providing now more and deeper insight.

**Presenter:** PALMER, Mark (BNL)

**Session Classification:** Accelerators
