

# MULTIJET CROSS SECTIONS AT THE LHC

Christine McLean,  
on behalf of the CMS and ATLAS collaborations

DPF 2019

July 30, 2019

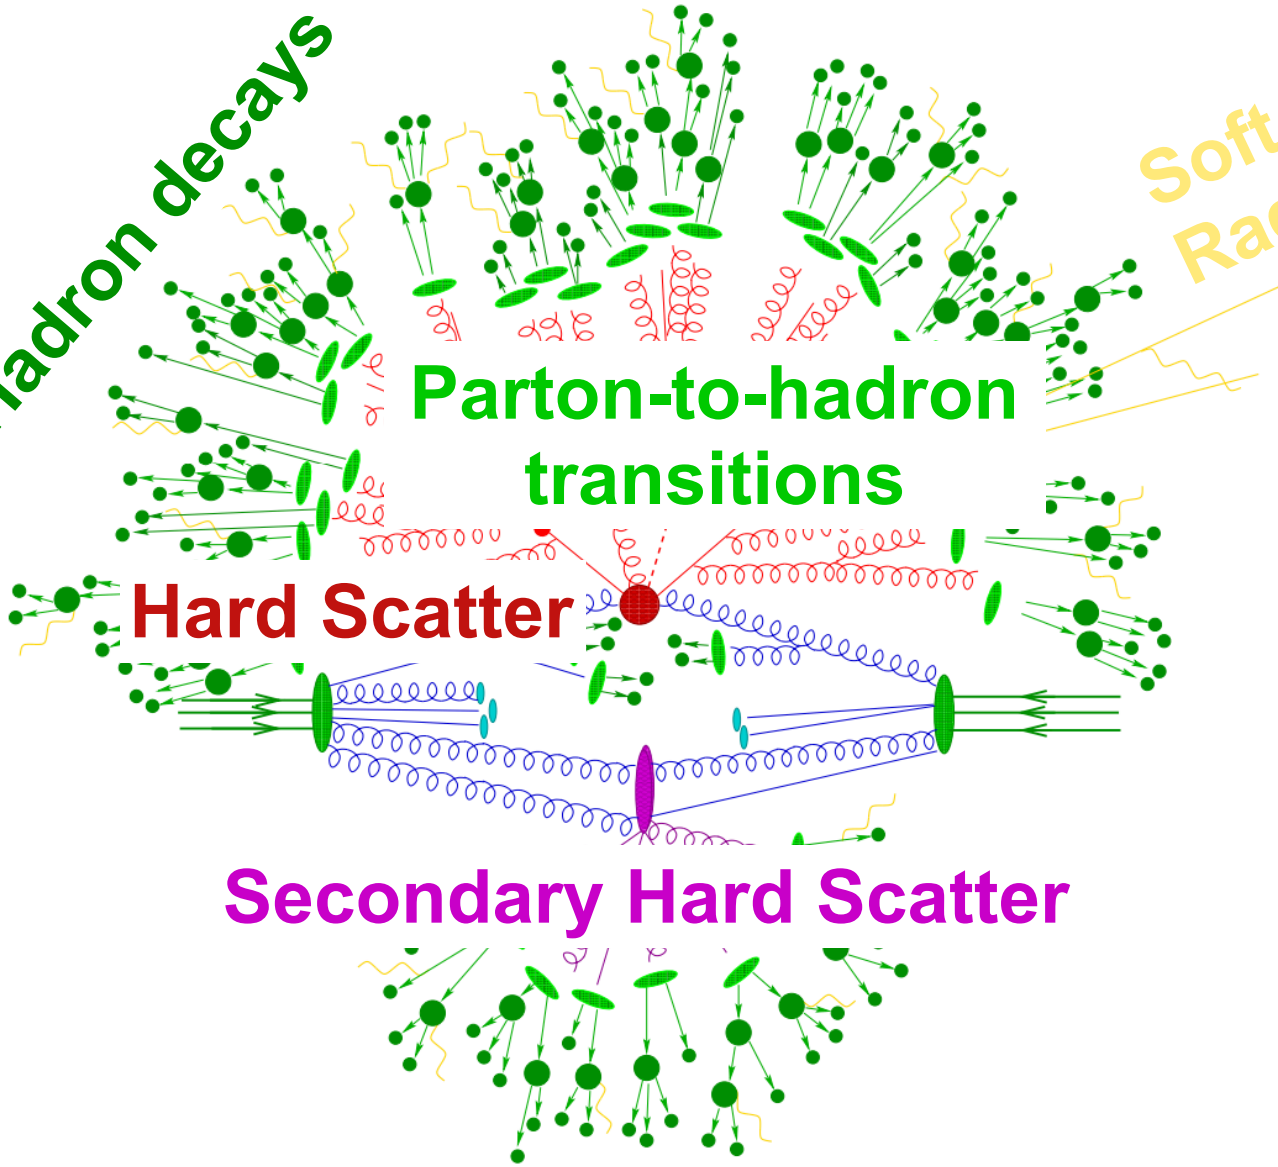

Hadron decays

Soft Photon Radiation

Parton-to-hadron transitions

Hard Scatter

Secondary Hard Scatter

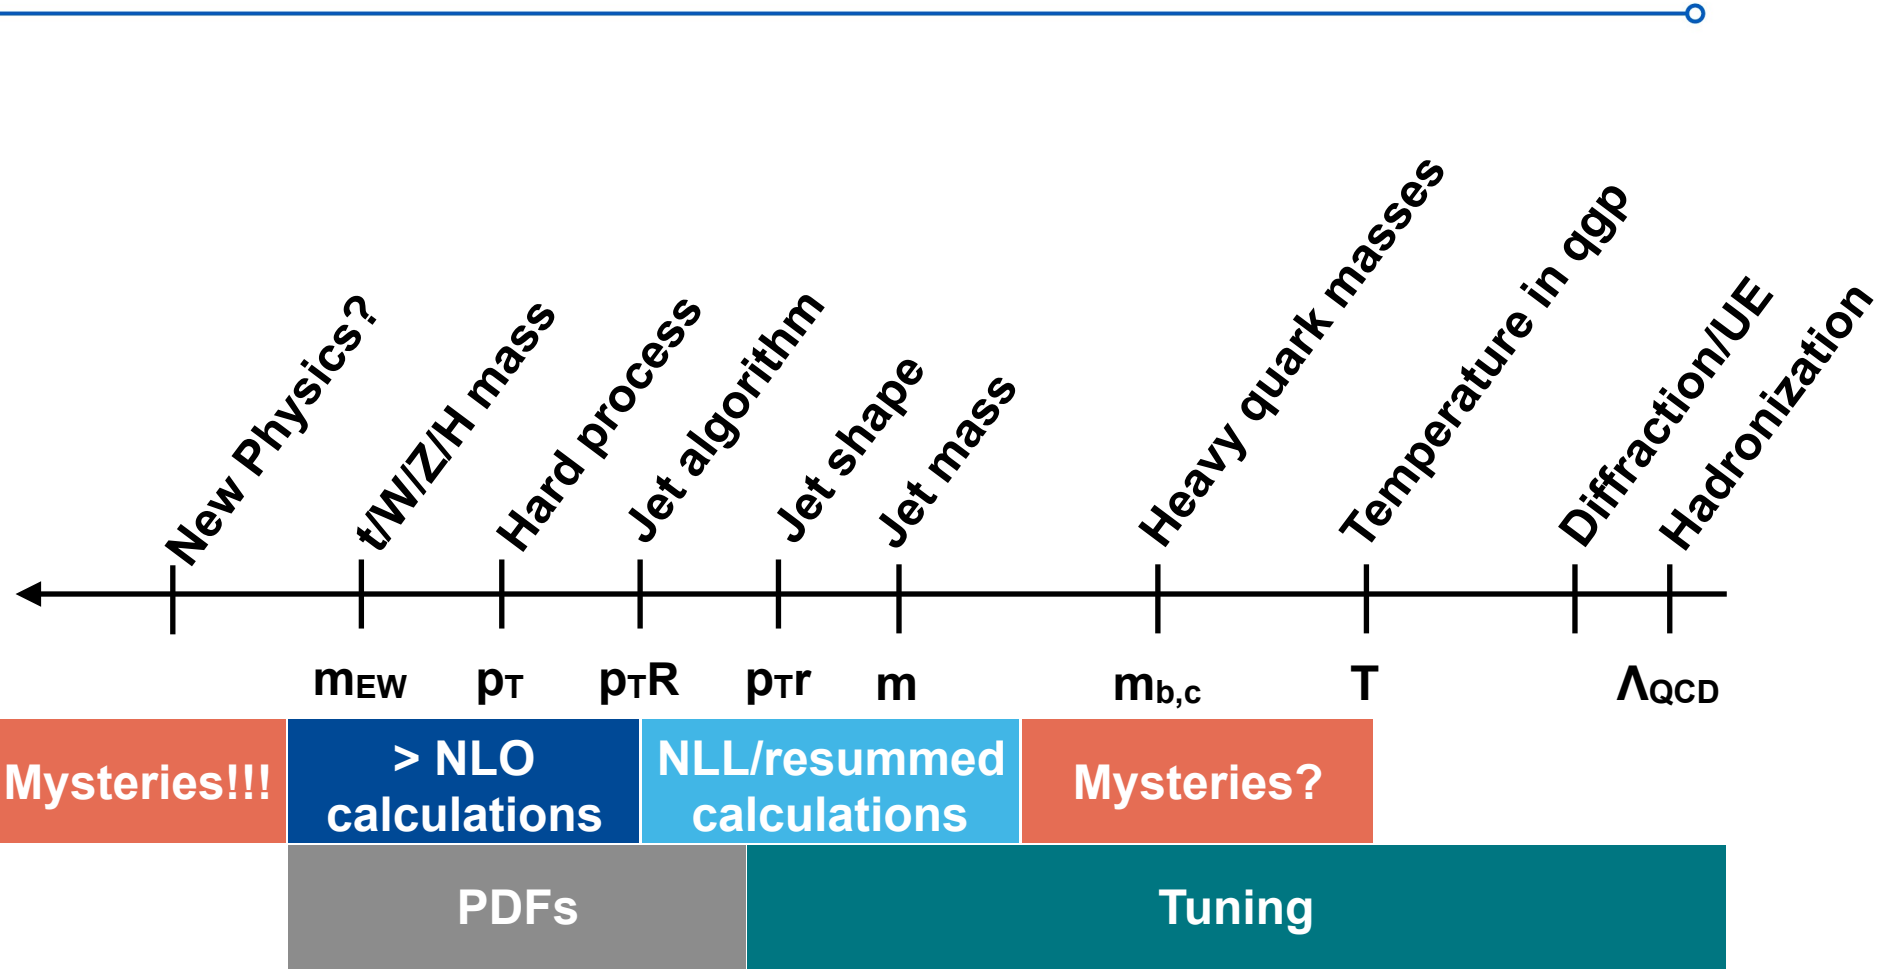

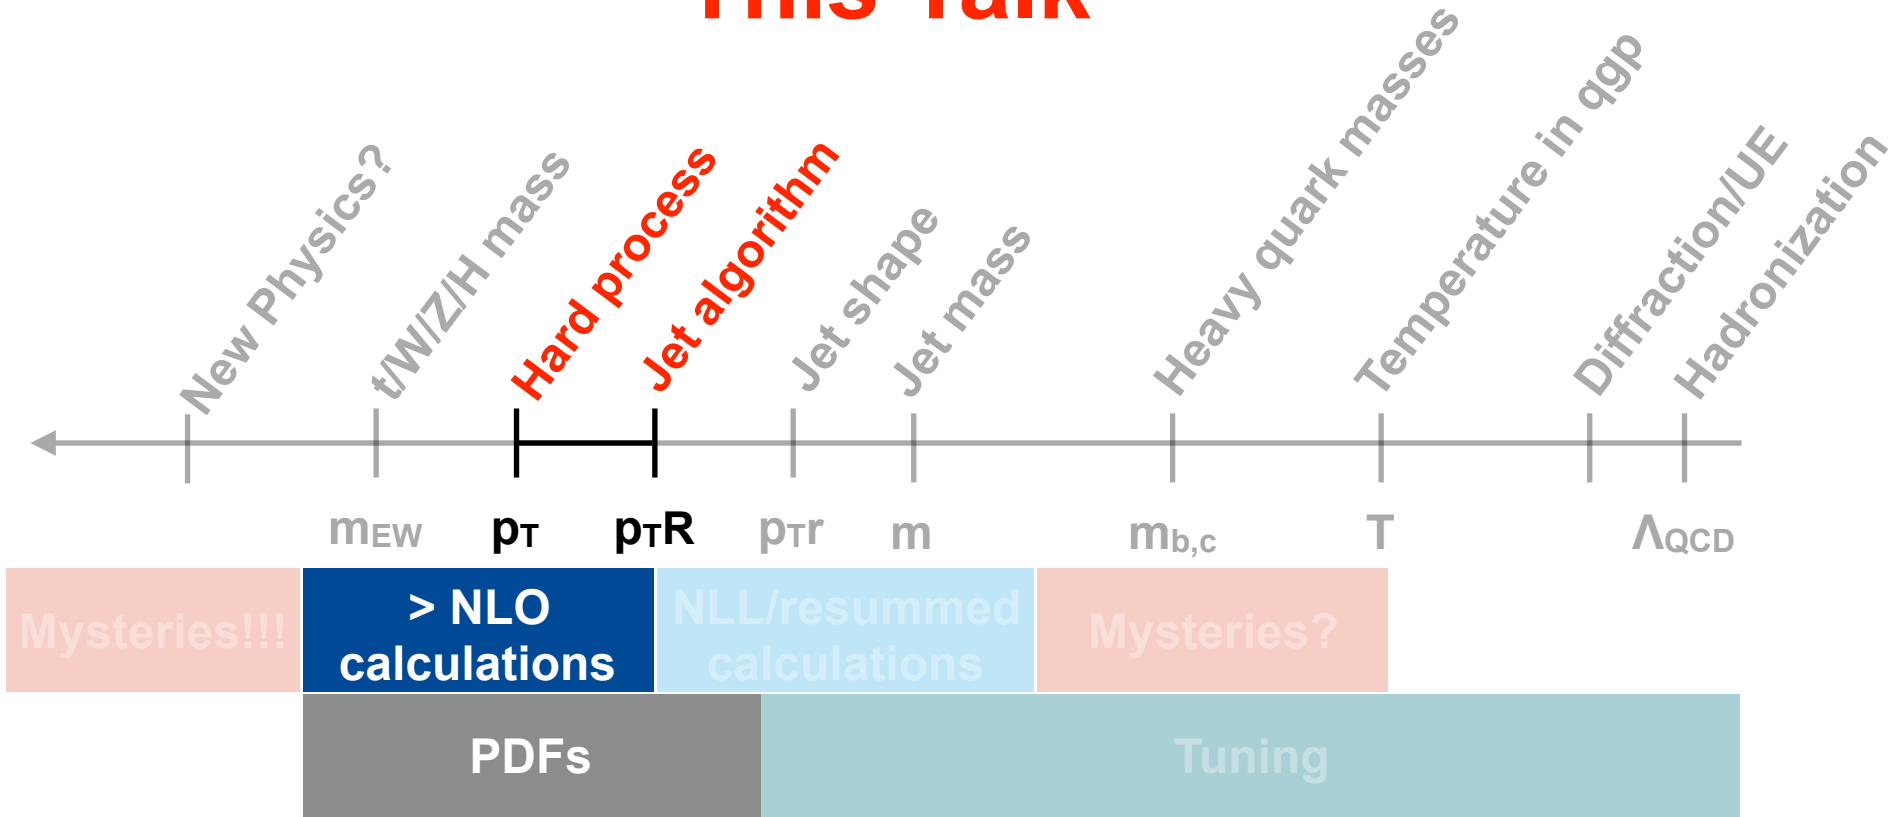

**Probe Hard Scatter**

**Probe Jet Structure**

## This Talk

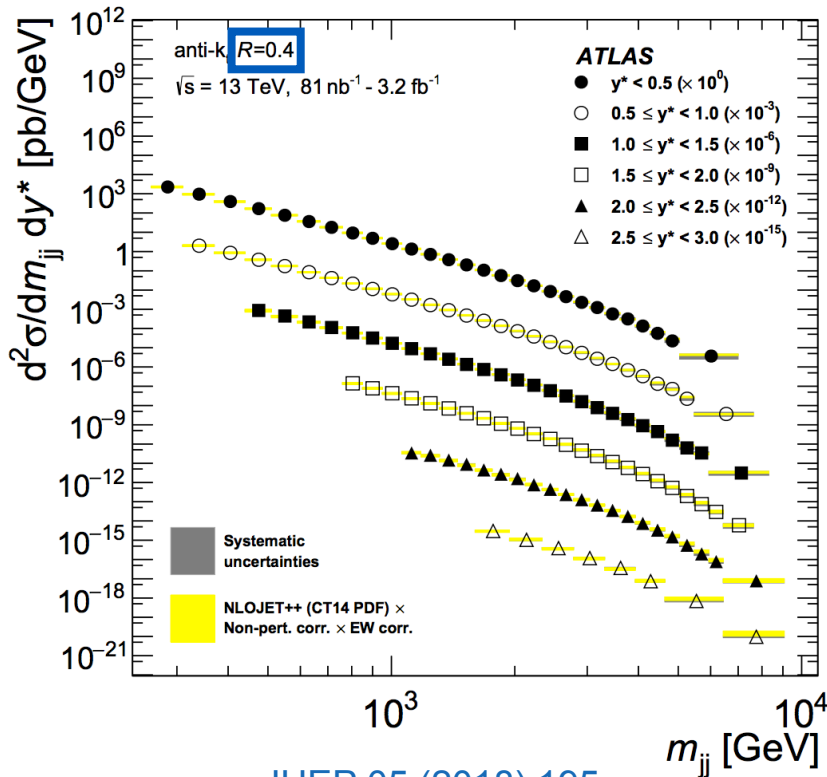

Jet substructure: see M. LeBlanc's talk

## Test predictions of pQCD at high energy

ATLAS: 13 TeV double differential xs

CMS: 8 TeV triple differential xs

$$y^* = |y_1 - y_2|/2$$

$$p_{T, \text{avg}} = (p_{T,1} + p_{T,2})/2$$

$$y_b = |y_1 + y_2|/2$$

## Test predictions of pQCD at high energy

ATLAS: 13 TeV double differential xs

CMS: 8 TeV triple differential xs

$$y^* = |y_1 - y_2|/2$$

$$p_{T, \text{avg}} = (p_{T,1} + p_{T,2})/2$$

$$y_b = |y_1 + y_2|/2$$

# Dijet Cross Section

## Constrain PDFs, measure $\alpha_s$

CMS dijet data  
reduces gluon PDF  
uncertainty at high  $x$

$$\alpha_s(M_Z) = 0.1199 \pm 0.0015 (\text{exp}) \begin{matrix} +0.0031 \\ -0.0020 \end{matrix} (\text{theo})$$

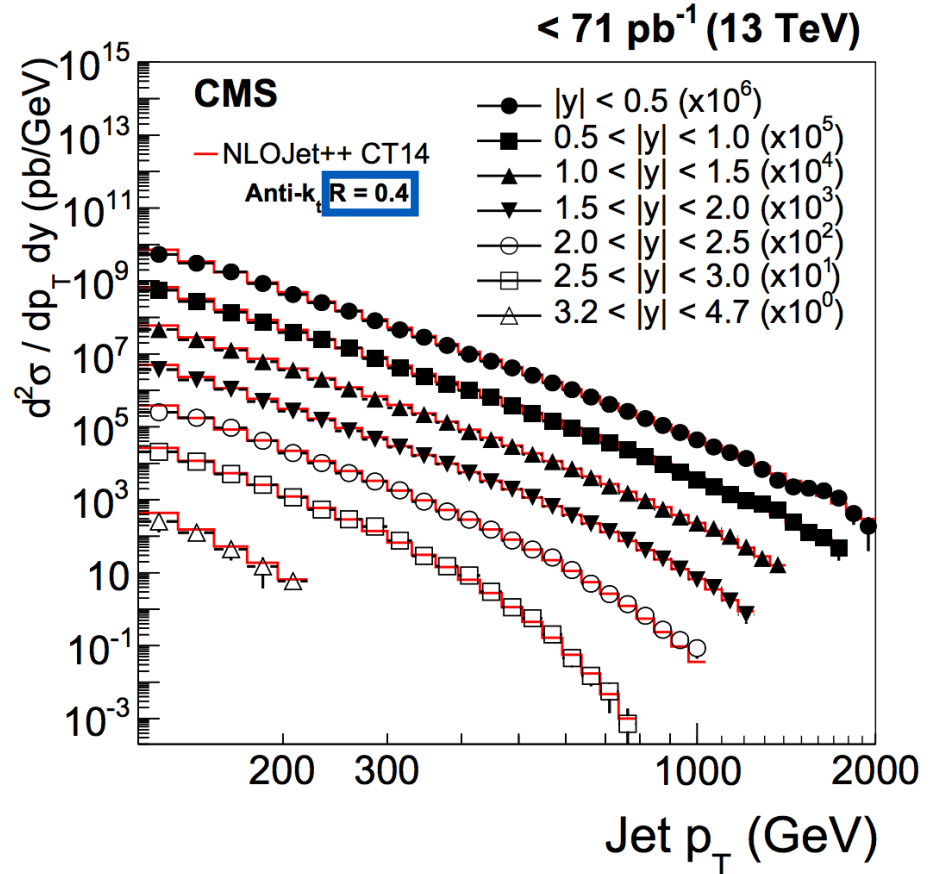

ATLAS, CMS: 13 TeV double differential xs

[JHEP 05 \(2018\) 195](#)

[Eur. Phys. J. C 76 \(2016\) 451](#)

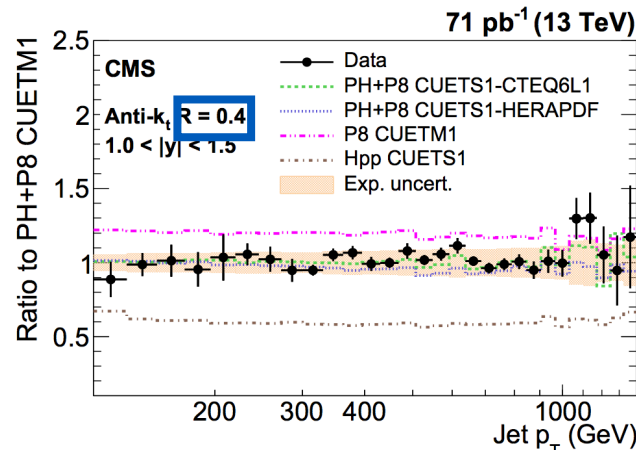

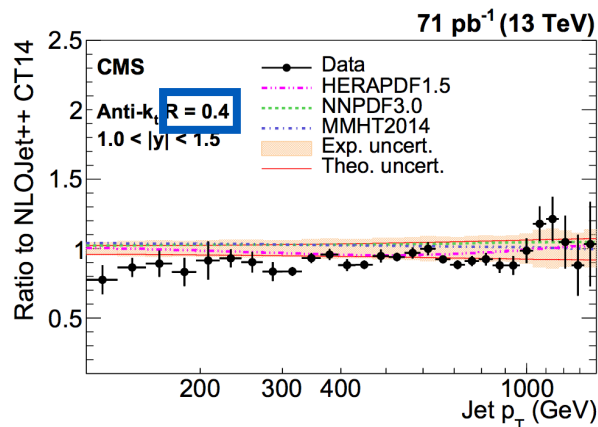

Data/prediction appear to agree relatively well

# Inclusive Jet Cross Section

## • Closer look at CMS results

- Fixed-order NLO predictions + NP, EW corrections (NLOJet++)
  - Overestimates  $R=0.4$  due to missing PS, soft-gluon resummation contributions
- NLO predictions matched to parton showers (PH+P8) more effective overall

## Measure jets with different cone sizes to probe different aspects of parton evolution

Parton shower:  $(\delta p_T)_{PS} \sim \ln R^{-1}$

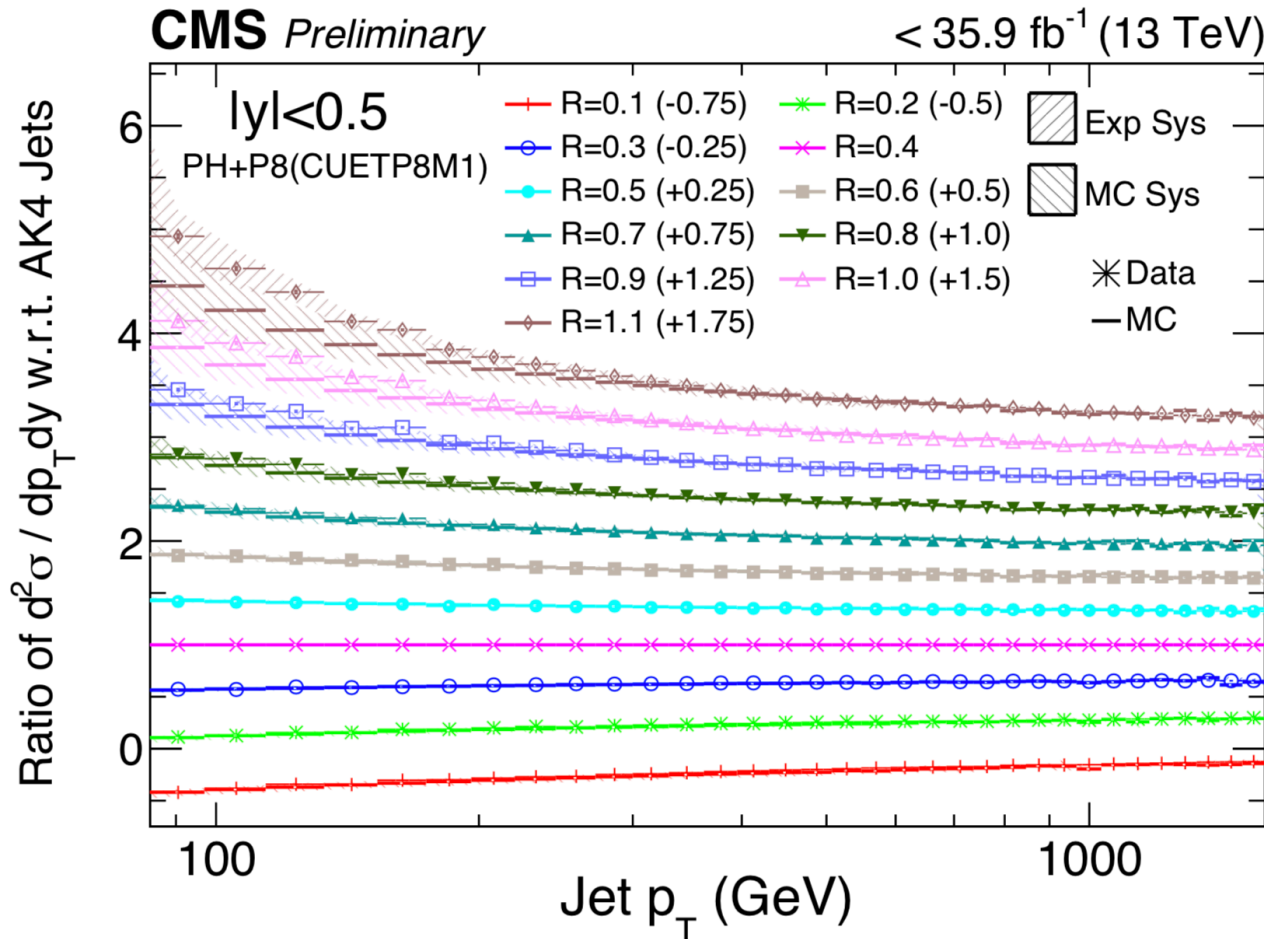

Hadronization:  $(\delta p_T)_{HAD} \sim R^{-1}$

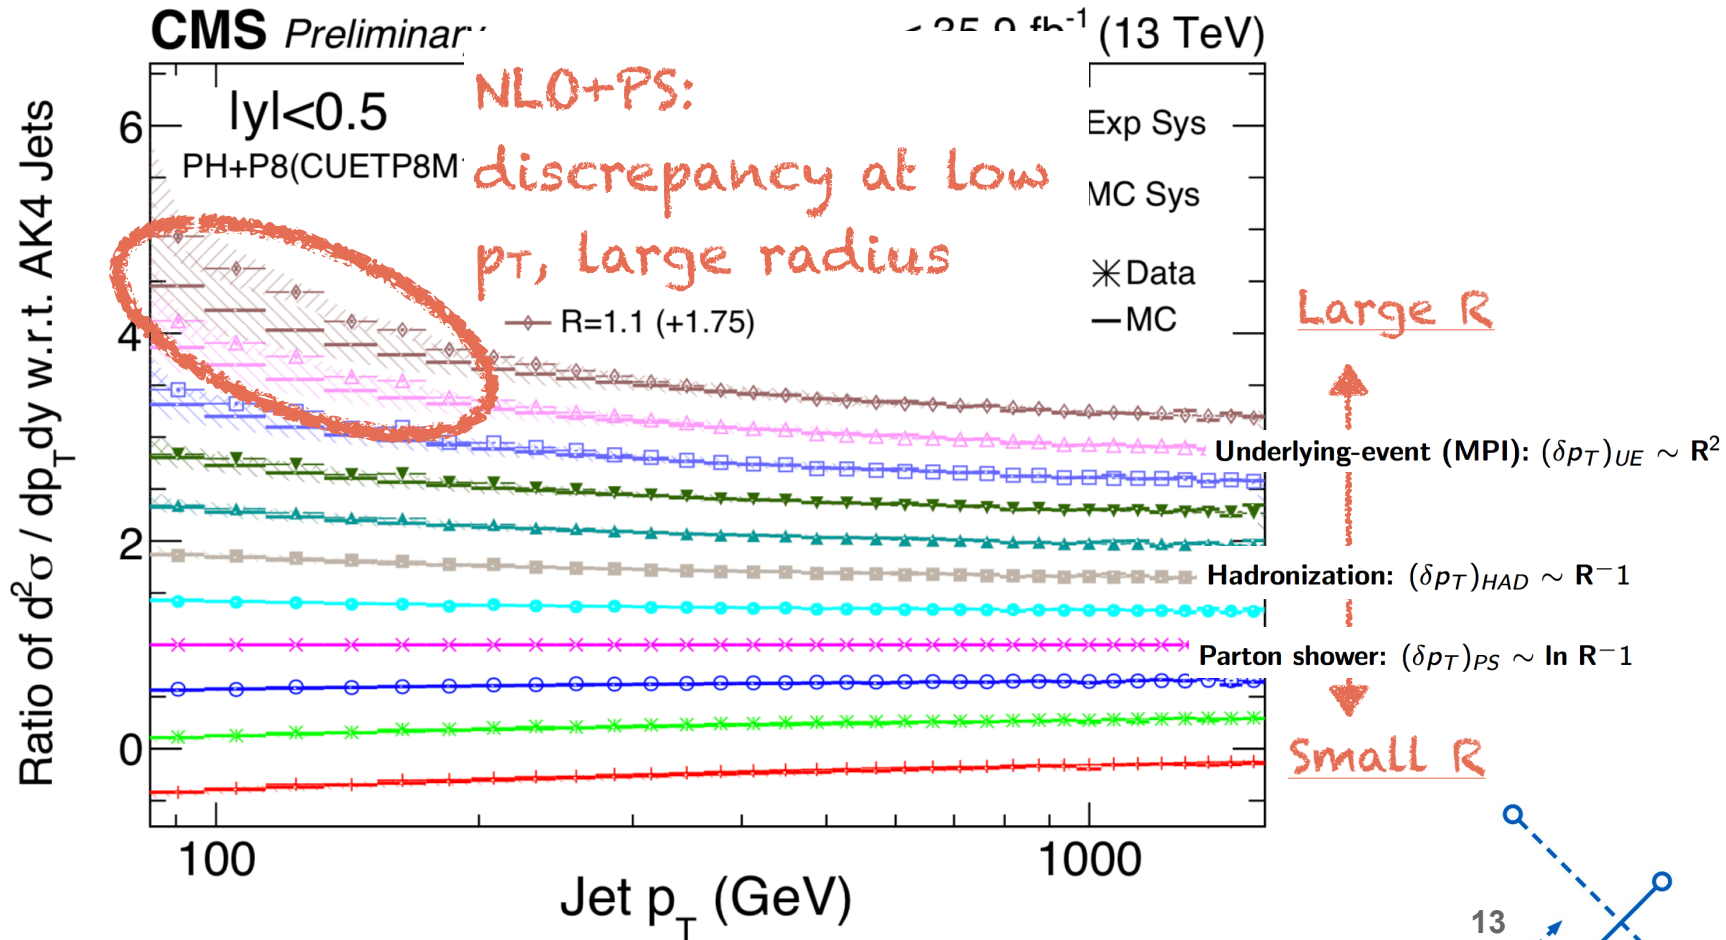

Underlying-event (MPI):  $(\delta p_T)_{UE} \sim R^2$

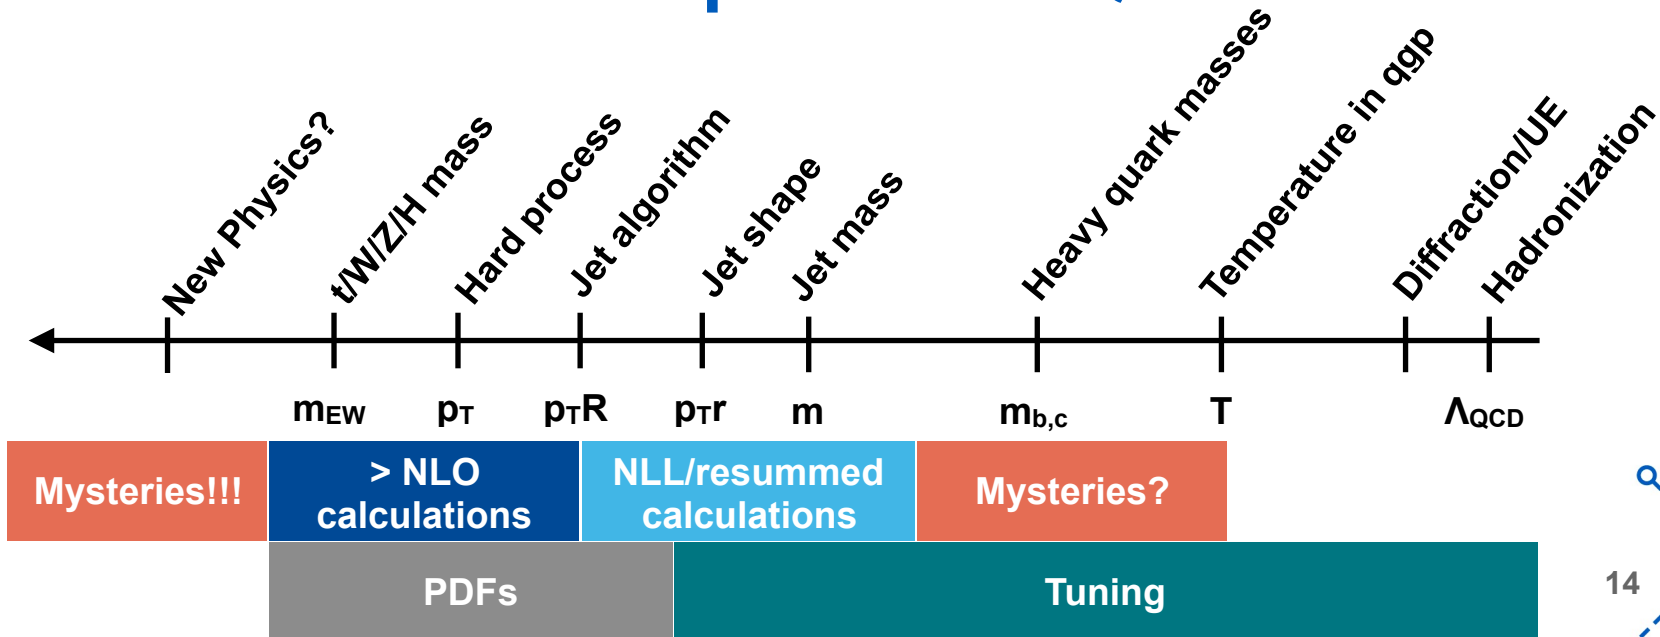

## Test dependence of jet production xs on anti- $k_T$ distance parameter

## Test dependence of jet production xs on anti- $k_T$ distance parameter

- **Jet cross section measurements give us a handle on QCD**
  - pQCD,  $\alpha_s$ , PDFs, ...
- **Different jet cone sizes probe different regions of QCD**
- **See Matt's talk for jet substructure measurements - probe NP QCD**

---

# Additional Material

- PYTHIA8:  $2 \rightarrow 2$  parton production @ LO + PS and UE
- HERWIG++ 2.7:  $2 \rightarrow 2$  parton production @ LO + PS and UE
- HERWIG 7:  $2 \rightarrow 2$  parton production @ NLO + PS and UE
- MADGRAPH\_AMC@NLO+PYTHIA8:  $2 \rightarrow 2+n$  (with  $n < 3$ ) parton production @ LO + PS and UE
- POWHEG+PYTHIA8:  $2 \rightarrow 2$  parton production @ NLO + PS and UE
- POWHEG+HERWIG++:  $2 \rightarrow 2$  parton production @ NLO + PS and UE
- NLOJET++:  $2 \rightarrow 2$  dijet production @ NLO

Leading order process

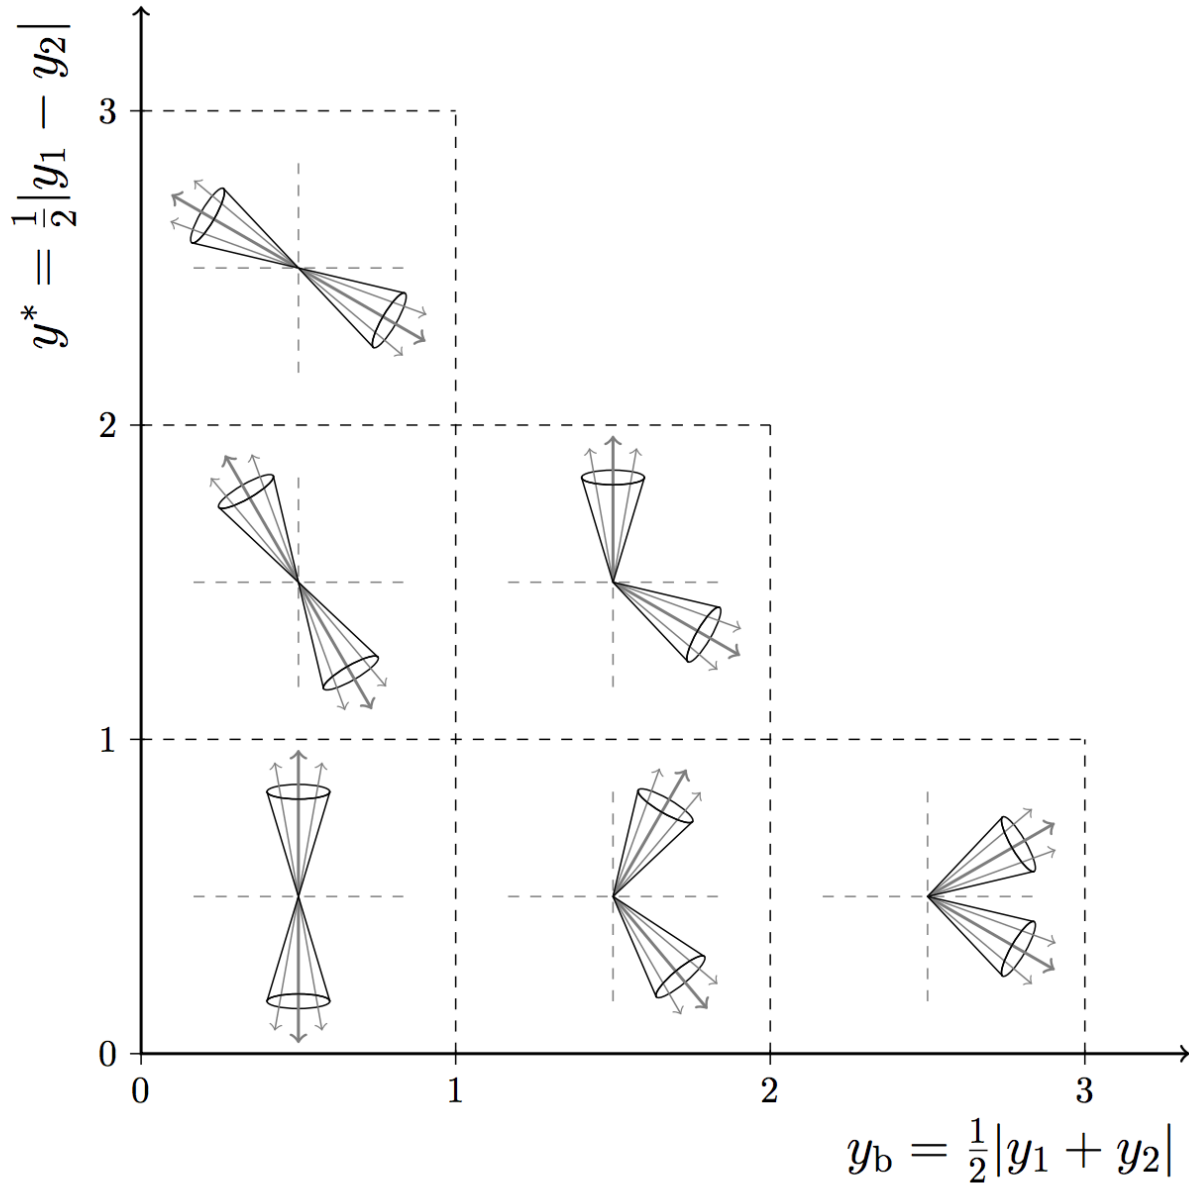

Real correction

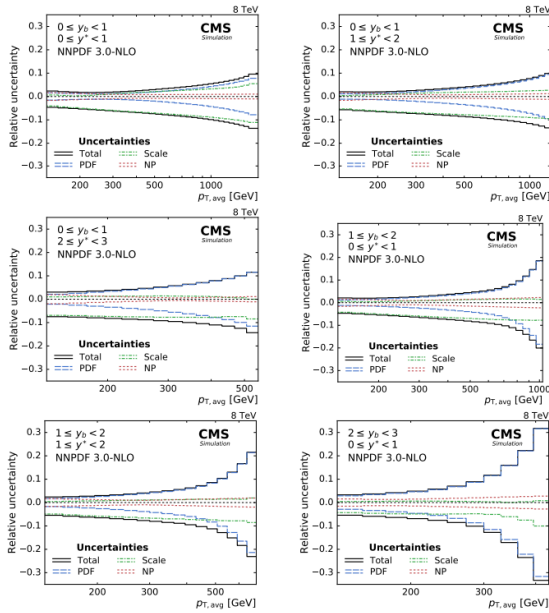

Virtual correction

# 3D dijets: Theoretical uncertainties

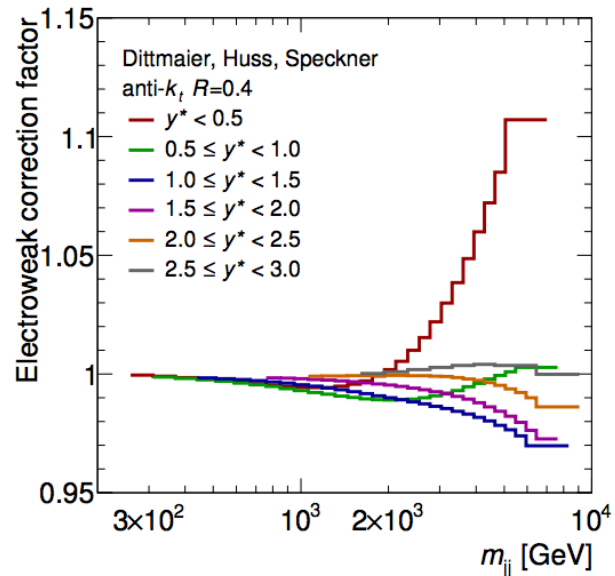

- no uncertainties in the EW corrections are assigned

# ATLAS Dijets: Theory Corrections

# ATLAS Inclusive: Theory Corrections

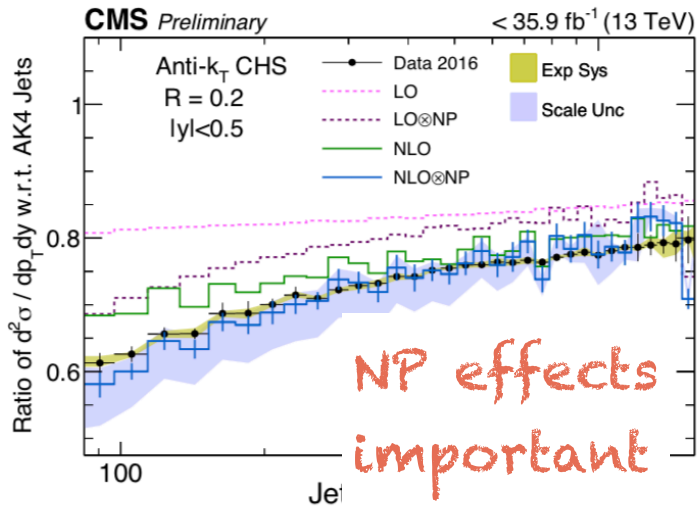

# Jet Cross Sections

## Fixed order

## Fixed order vs MC with PS resummation

*Soft radiation effects ← → Effects of hadronization, out-of-cone radiation*
