The Higgs: high- p_T vs. low-energy phenomena

Tuesday 24 September 2019 11:20 (30 minutes)

I plan to discuss the interplay between Higgs phenomena in high- p_T measurements and low-energy searches. Topics that may be covered are determinations of light-quark Yukawa couplings, bounds on CP-violating or flavour-violating Higgs couplings from searches for electric dipole moments, and more if time permits.

Presenter: HAISCH, Ulrich Andreas (Max Planck Institute Munich)

Session Classification: Flavor
