### Local and non-local form factors in exclusive $b \rightarrow s\ell\ell$

*Tuesday 24 September 2019 18:15 (25 minutes)*

Theory predictions for exclusive  $b \rightarrow s\ell\ell$  amplitudes require the evaluation of local and non-local form factors. I will discuss the calculation of local form factors beyond the narrow-width limit, as well as the perturbative and non-perturbative aspects of the non-local form factors, which include the charm-loop effect.
