OA Discovery through Unpaywall

Thursday, 20 June 2019 14:40 (20 minutes)

Jason will talk about Unpaywall, the open database for Open Access discovery. Using open source software, the small team behind Unpaywall has gathered links to over 20 million OA articles and makes them available through a free browser extension used by more than 200,000 active users. The Unpaywall dataset also powers the open access discovery in Europe PMC, Web of Science, the British Library, and thousands of libraries worldwide. We'll talk about the progress, challenges, and next steps for discovery of Open resources using the Unpaywall approach.

Theme

Presenter: PRIEM, Jason (Impact Story)

Session Classification: Session 5
