Preprints in Medicine - safeguarding the need for speed

Thursday, 20 June 2019 17:45 (15 minutes)

By posting preprints authors can help promote openness and transparency and reduce research waste from duplicated efforts and non-reporting. However, there are concerns about providing public access to preliminary clinical research for fear of causing harm. We believe that medRxiv, a new preprint server for the health sciences, will provide a valuable service to the clinical research community by helping to ensure a balance of safeguards and speed.

Theme

Presenter: RAWLINSON, Claire

Session Classification: Invitation to give 15-minute papers
