ADC Weekly meeting
29.01.2019

Production status

- Very stable week
 - Running currently ~ 100k deriv, 100k simul, 60k reco, very little evgen (grid only)
 - Adding in BOINC and dedicated HPC we get up to another 30k simul
 - Only problem: Stuck AODmerge jobs -> David is in discussion with Rod
- Many older requests are now getting done, most steps now \leq 90 day old tasks
- Simulation backlog down to 890M (= 210M, removing the paused AF2 top mass)
- More request are in the pipeline (30 already approved)
- Have big Z->ll extensions for HPC, which are submitted in 10M, now in hand
