April 2019

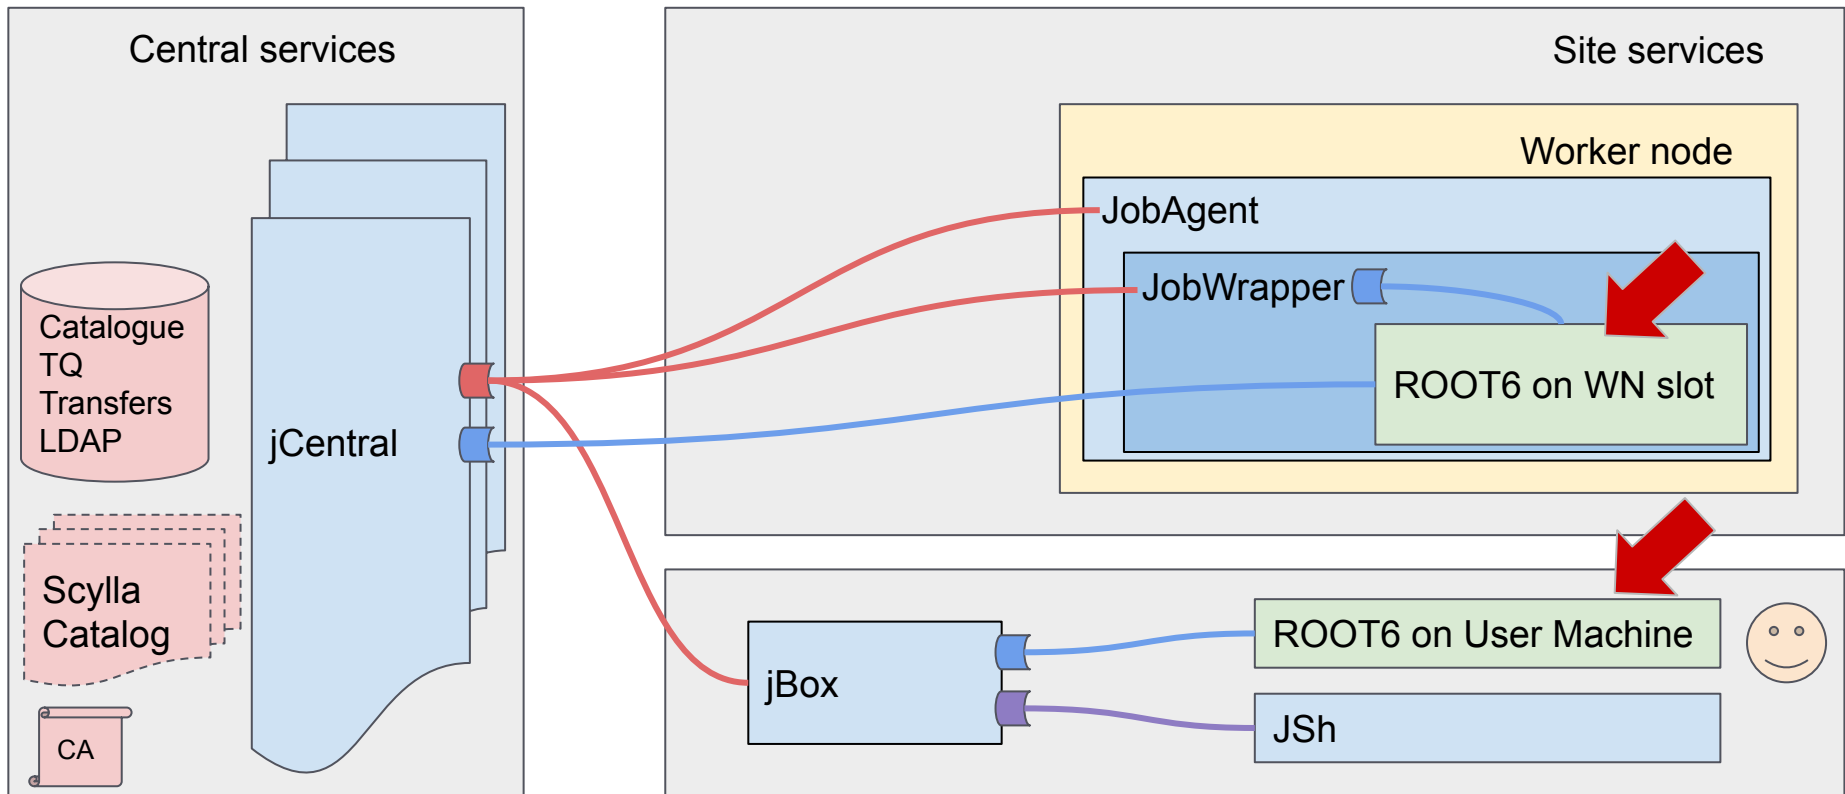

# (J)AliEn components

 Discussed in this presentation

 SSL(Compressed(Java serialized object stream)) (TCP/8098)

 WebsocketS, JSON serialization of requests/replies (TCP/8097)

# ROOT Grid plugins

- **What is JAlien-ROOT?**

- A ROOT Grid plugin, the TJAlien
- Implements TGrid, TFile, TGridCollection...
- It will eventually replace the existing ROOT Grid plugin, the TAlien

- **How to use it?**

- Start aliroot shell
- `root[0] TGrid::Connect("alien://");`
- `root[1] gGrid->Ls();`

- **Try it out yourself!**

- `$ aliBuild build AliPhysics --defaults jalien`

# Grid jobs with JAliEn based AliPhysics

## Phases of migration from AliEn to JAliEn:

- **Using the JAliEn API and TJAlien**
- Use the new JobAgent
- Replace VoBox software
- *(Move to Scylla backend)*
- ...

# The plan for JAliEn-ROOT integration

1. The AliRoot and AliPhysics preparations
2. Extracting AliEn-ROOT-Legacy
3. Runtime dependencies in AliRoot
4. JAliEn based AliPhysics build

# The plan for JAliEn-ROOT Integration

1. The AliRoot and AliPhysics preparations
2. Extracting AliEn-ROOT-Legacy
3. Runtime dependencies in AliRoot and AliPhysics
4. JAliEn based AliPhysics build

# News and updates

# Step 1: AliRoot/AliPhysics preparations

- **Removing compile time dependencies**
  - Mostly TAlienCollection, TAlienJDL and TAlien
  - Runtime dependencies still there, work in progress
- **Build scripts adapted for interchangeable ROOT Grid plugins**
  - We have a clean ROOT build
  - And we can swap between TAlien and TJAlien
- **Very big pull requests**
  - Modified ~100 files
  - Mostly simple changes, but still had to be done manually and carefully
  - Went according to plan and (almost) unnoticed
  - Opened 15/01/2019 and merged 11/02/2019
  - Included in AliRoot/AliPhysics v5-09-46

# Step 2: Extracting AliEn-ROOT-Legacy

- The good old TAlien plug-in, just in a separate package
- Code moved to <https://gitlab.cern.ch/jalien/alien-root-legacy>
- Now using the same plug-in for ROOT5 and ROOT6
  - The versions had diverged
  - Histories merged, now using the same version everywhere
  - **The important patches now available in ROOT6, too**
- Good news: It's completely under our control
- Faster updates for *JAliEn-ROOT* and *AliEn-ROOT-Legacy* \o/

# Step 2: Extracting AliEn-ROOT-Legacy

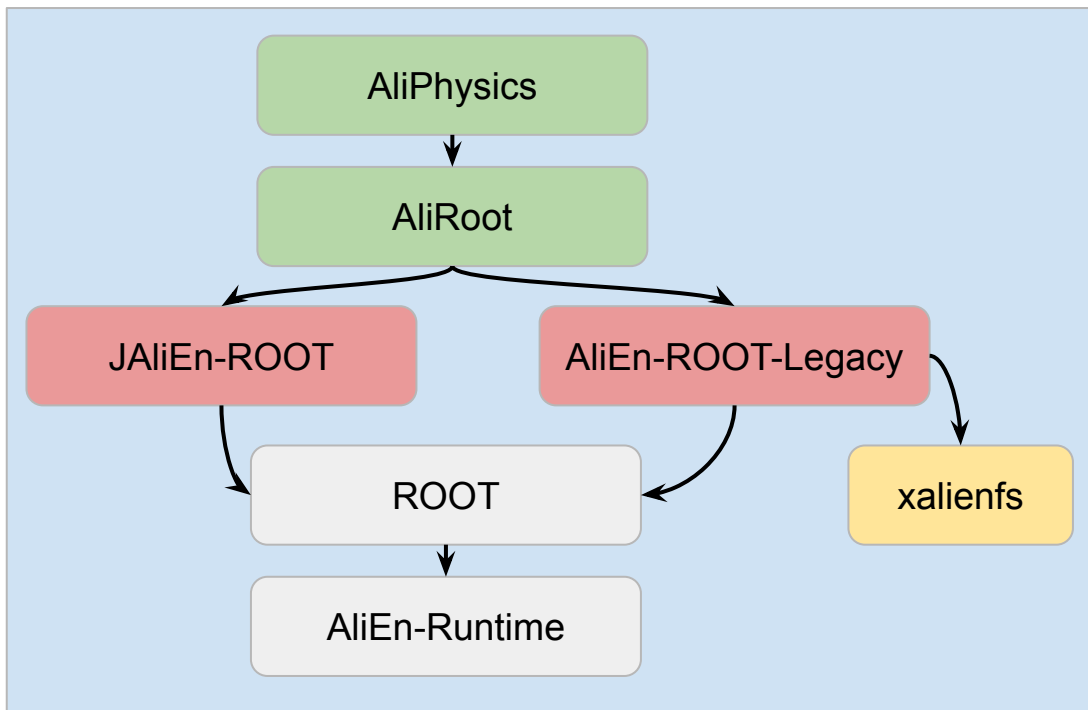

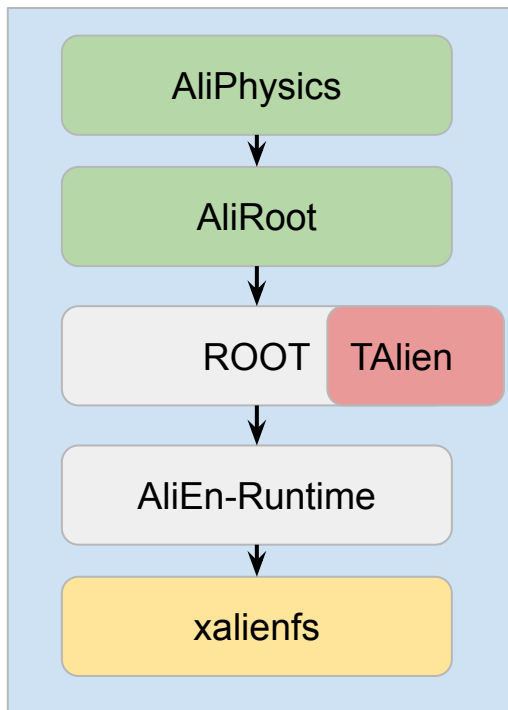

## IMPORTANT CHANGES IN ALIDIST (merged on 27/03/2019)

- Added the a **new recipe AliEn-ROOT-Legacy**
- The xalienfs is now dependency of AliEn-ROOT-Legacy
- AliRoot gets a new dependency: the AliEn-ROOT-Legacy or JAliEn-ROOT
- AliEn-Runtime is targeted to be the common ground for both Grid plug-ins
- **ROOT is built without alien** and this means that
  - `root --has-alien` says “no”, which is intended and ok

**IMPORTANT: alien-token-init not loaded with ROOT!**

The alien utils now loaded as dependency of AliRoot (and AliPhysics).

# Step 2: Extracting AliEn-ROOT-Legacy

# Step 2: Extracting AliEn-ROOT-Legacy

## Recent hotfixes (last ~7 days)

- MERGED: Fixed failing build/linking on the Mac
- MERGED: Fixed AliRoot dependencies for --defaults user-root6
- READY: Fixed xalienfs environment, it was causing problems on CVMFS
- WIP: Fixed the shared libraries on the Mac
  - A quick fix provided on the mailing list
  - A proper solution is being implemented
  - MacOS support will be improved in the future

# Step 2: Extracting AliEn-ROOT-Legacy

- Next AliRoot release will use AliEn-ROOT-Legacy
  - This is the same AliEn Grid plug-in as before, just a different setup
  - Most important commits already merged into alidist master
  
- JAliEn based AliRoot builds will be announced later

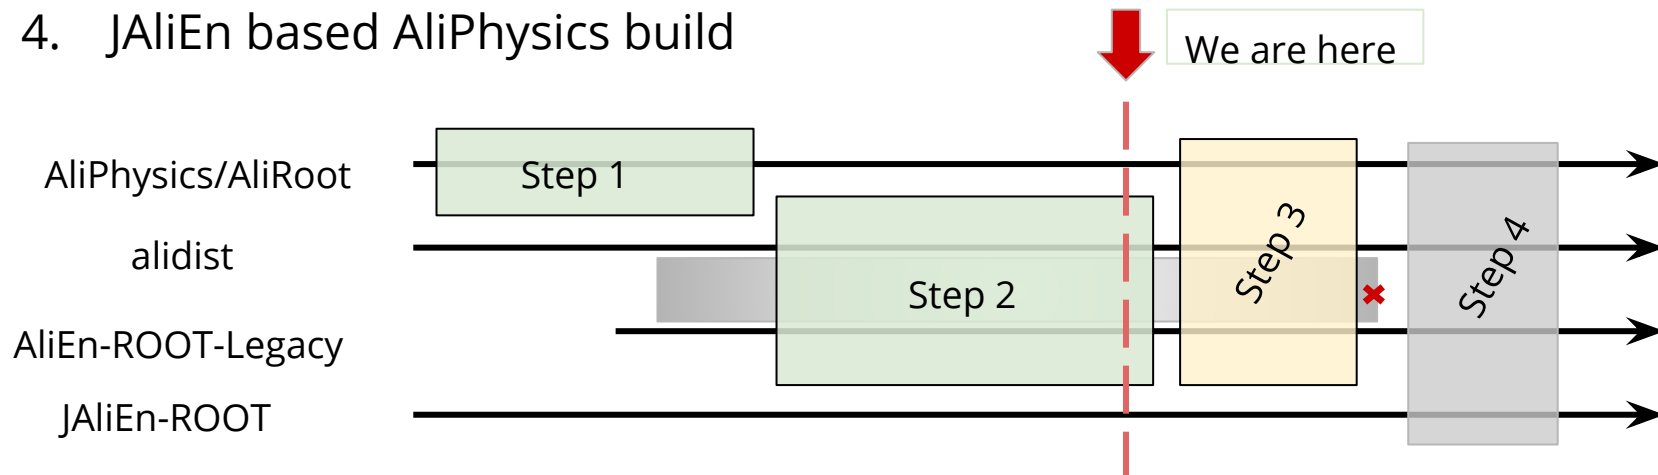

**Next steps**

# The plan for JAliEn-ROOT Integration

1. The AliRoot and AliPhysics preparations
2. Extracting AliEn-ROOT-Legacy
3. Runtime dependencies in AliRoot and AliPhysics
4. JAliEn based AliPhysics build

# Step 3: AliRoot/AliPhysics runtime deps

- **Remove runtime dependencies on AliEn-ROOT-Legacy**
  - Use `gGrid->Command("find")` instead of `gSystem->Exec("alien_find")`
  - Remove the remaining dependencies on `TAlienFile` and `TAlienCollection`
- **Other tasks**
  - Improve compatibility between AliEn and JAliEn commands
  - Prepare replacement for xalienfs (`alien_find`, `alien_cp...`)
- **Why?**
  - To prepare the grounds for smooth transition to JAliEn-ROOT
  - Make AliPhysics work with both plug-ins
  - It's just a matter of tightening up code in AliRoot and AliPhysics
  - Helps us redefine our interfaces and make future transitions easier

# Step 4: JAliEn based AliPhysics build

## WORKING ON ALIPHYSICS BECAUSE

- Gives us a great opportunity to test JAliEn in a real-world scenario
- We can catch problems early and be ready for Run 3
- Gives us a better starting point for integration with O2
- Benefits from updated stack and new infrastructure
  - XRootD 4
  - JBox level caching
  - New Scylla based file catalogue?

# Summary

# JAliEn-ROOT integration with AliPhysics

1. The AliRoot and AliPhysics preparations

2. Extracting AliEn-ROOT-Legacy

3. Runtime dependencies in AliRoot

4. JAliEn based AliPhysics build

# AliEn-ROOT-Legacy general status

- New package created, operation went as expected
- We will see the new setup in the next AliRoot release
- Some issues affecting MacOS and CVMFS have just been fixed
- The same plug-in version for ROOT5 and ROOT6
- Continues to live in maintenance mode

# JAliEn-ROOT general status

- No obvious showstoppers at the moment
- We keep discovering minor issues
- Current activities are focused on AliPhysics side, not on TJAlien side
- New code for run 3 can already start testing TJAlien
- We will soon restart efforts for benchmark Grid jobs with both plug-ins
- Time to improve our testing infrastructure
  - MacOS builds
  - Parallel tests with TAlien and TJAlien

# Thank you!
