The 28th International Workshop on Vertex Detectors

Contribution ID: 53 Type: Talk

New Developments for the ILC Vertex Detectors

Thursday 17 October 2019 15:00 (22 minutes)

The International Linear Collider (ILC) is the next generation electron-positron high energy frontier machine. To perform the precision Higgs measurements and search for new physics, precise measurements of the vertex positions which are not achieved current experiments, are required. We will report on the new developments on the ILC vertex detectors covering sensor technologies and mechanical and cooling structures.

Author: WINTER, Marc (Centre National de la Recherche Scientifique (FR))

Co-author: ISHIKAWA, Akimasa (KEK)

Presenter: WINTER, Marc (Centre National de la Recherche Scientifique (FR))

Session Classification: Future facilities/experiments
