

AN EUA PERSPECTIVE

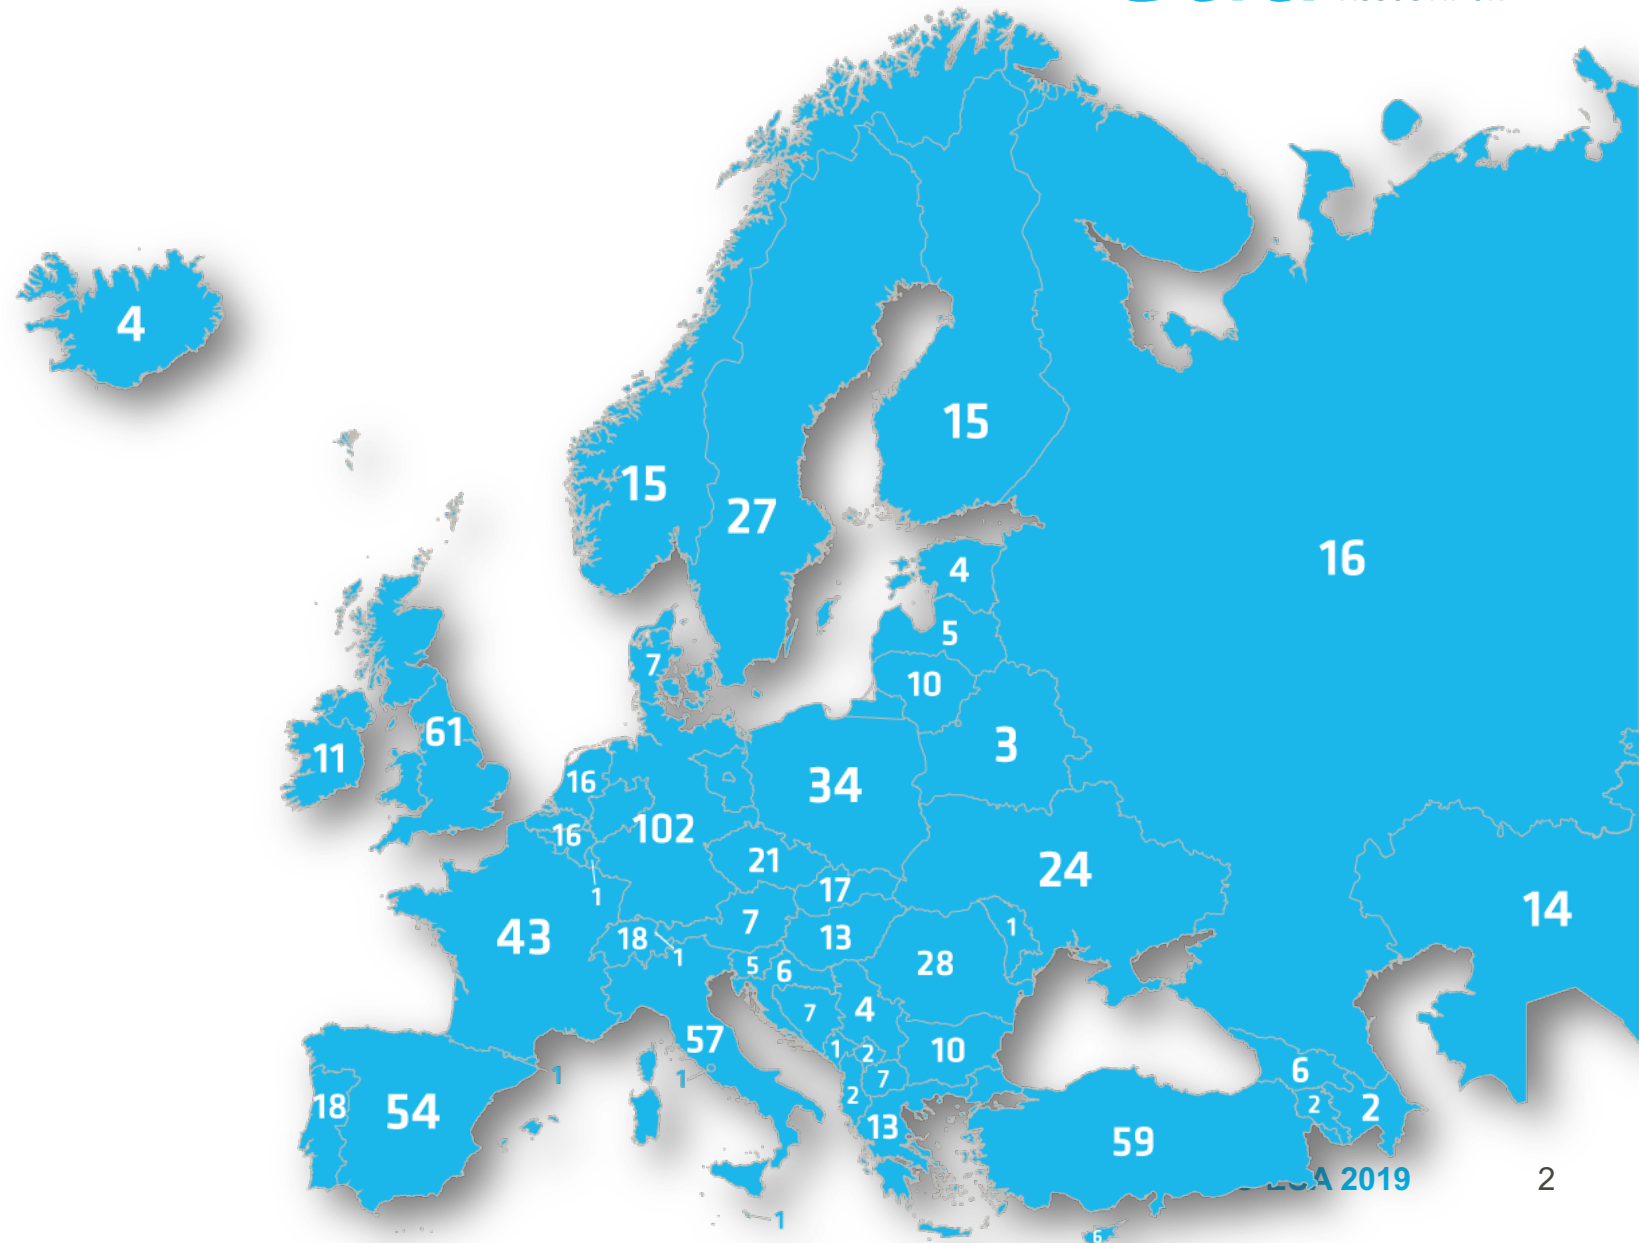

Developing the EOSC portal for the benefits of the user communities

Lennart Stoy

Project Manager, Research and Innovation
@lennrtsty

20 June 2019

EUA has about
850 members
based in 48
countries

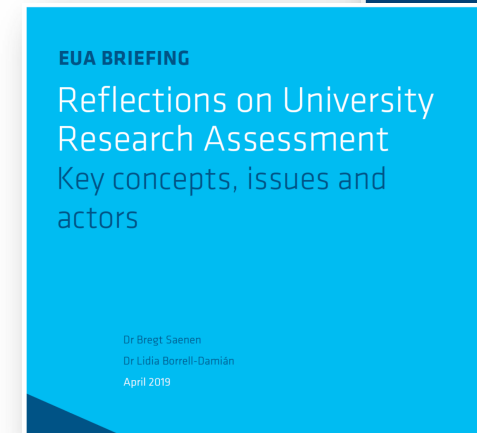

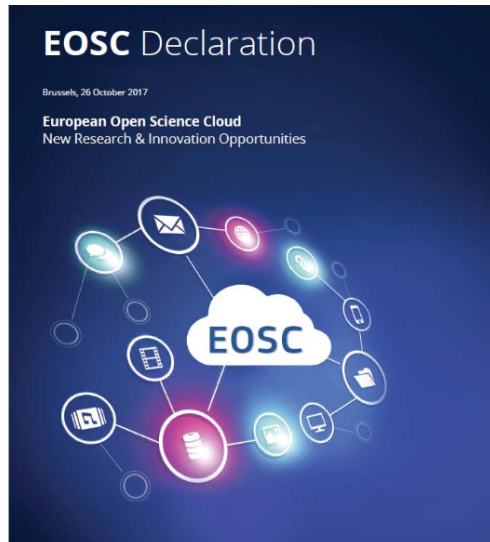

Main objectives

- **Facilitates dialogue on higher education & research**
- **Represents the interests of higher education sector**
- **Ensures the voice of universities is heard in EU policy making and in the ERA & EHEA**
- **Support its members with a range of services (strategy development, thematic peer groups & focus groups, events and publications)**

EUA and Open Science

- **Open Access to Publications and Big Deals**
- **Research Assessment**
- **Access to (FAIR) Data and Research Data Management**
- **EOSC**
- **OSPP**
- **Horizon Europe**
- **Copyright & PSI Directive**
- ...

Signatory of the EOSC Declaration

- **Open Science skills**
- **Data culture**
- **FAIR principles**
- **Open Access and open standards**
- **Governance**

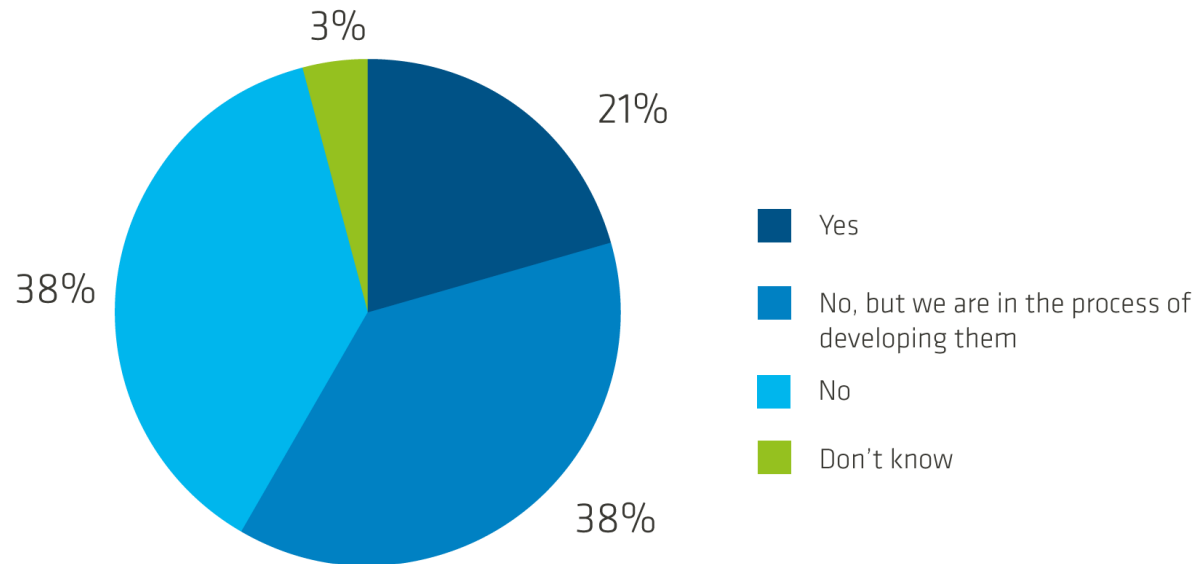

Core partner of FAIRsFAIR

- **Focussing on FAIR competences and policies**

The status quo of research data management

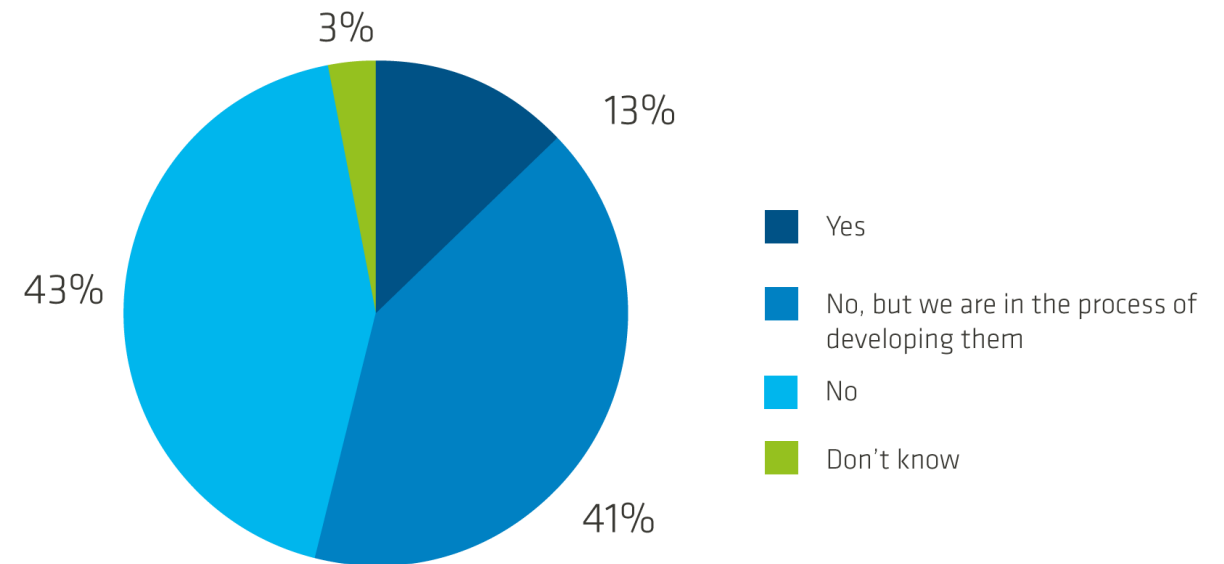

20 June 2019

Existence of RDM policy

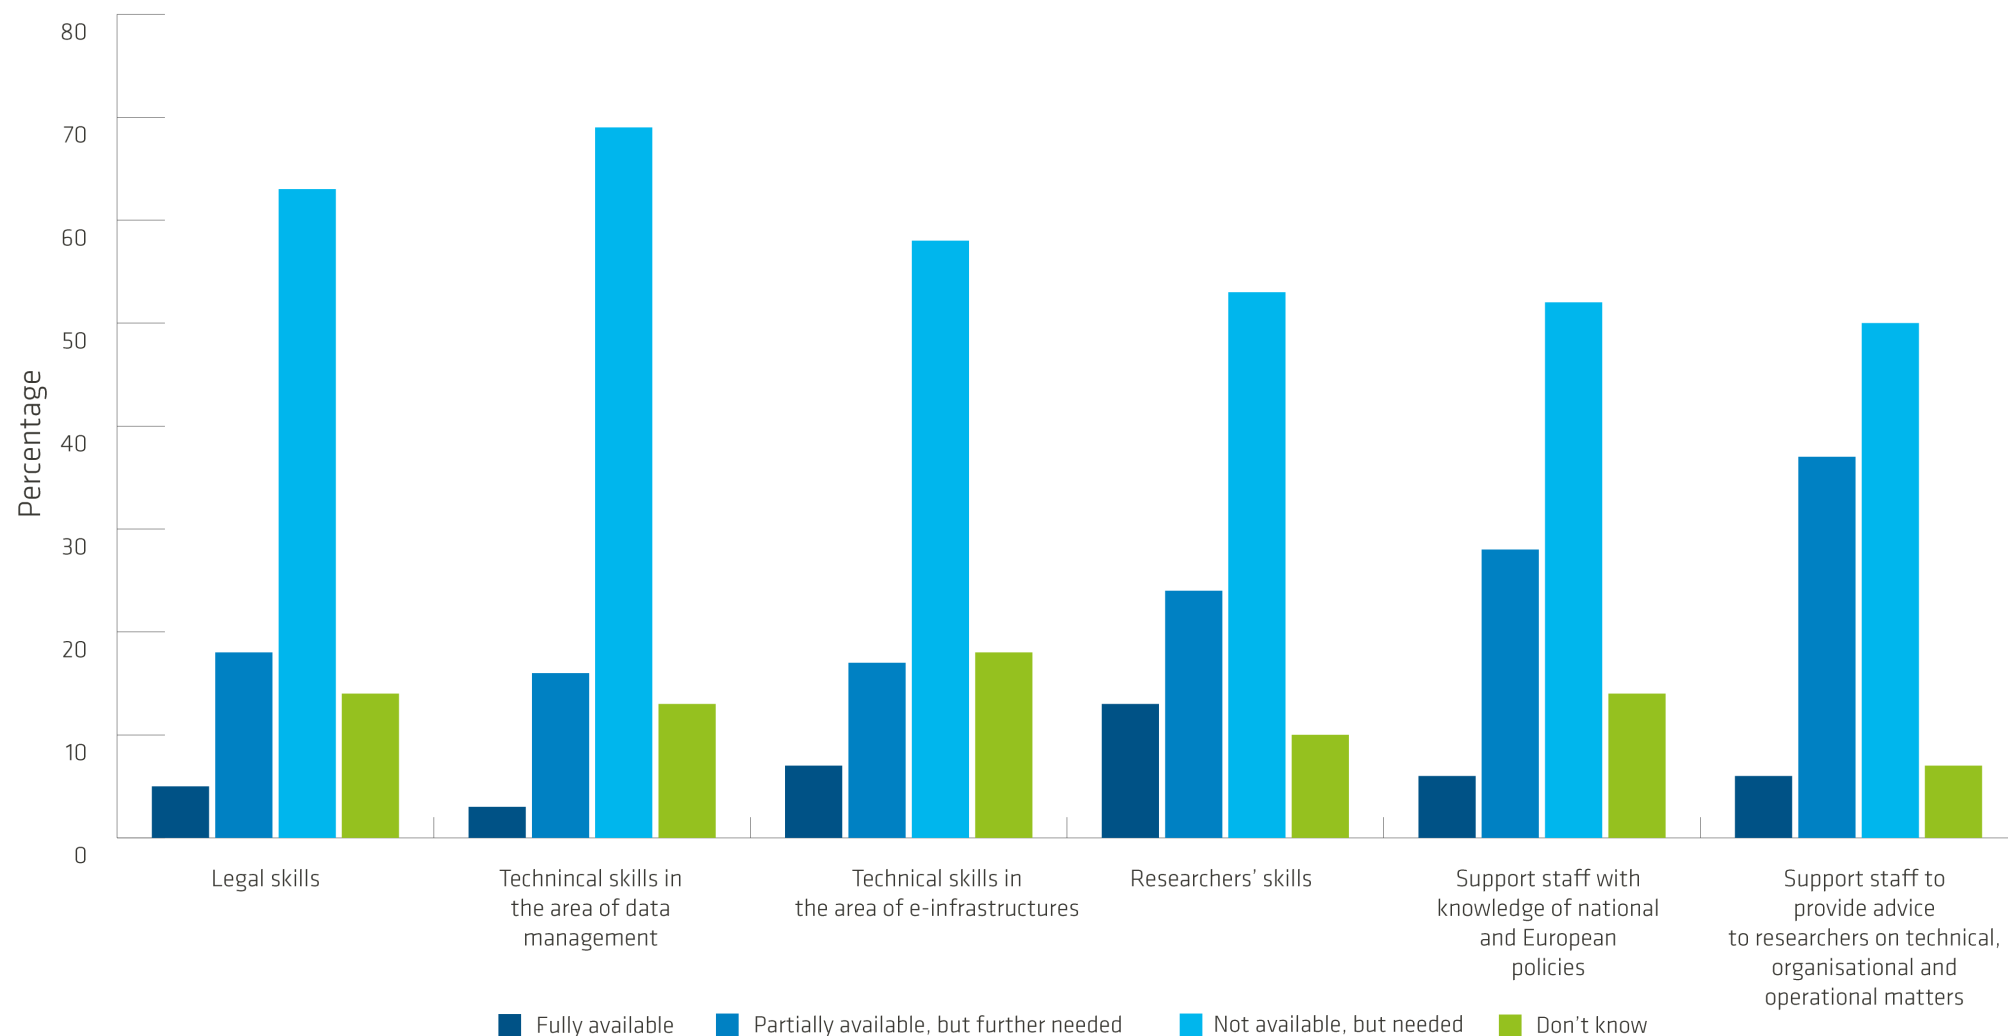

Number of respondents: 319/321

Existence of policy on OA to research data

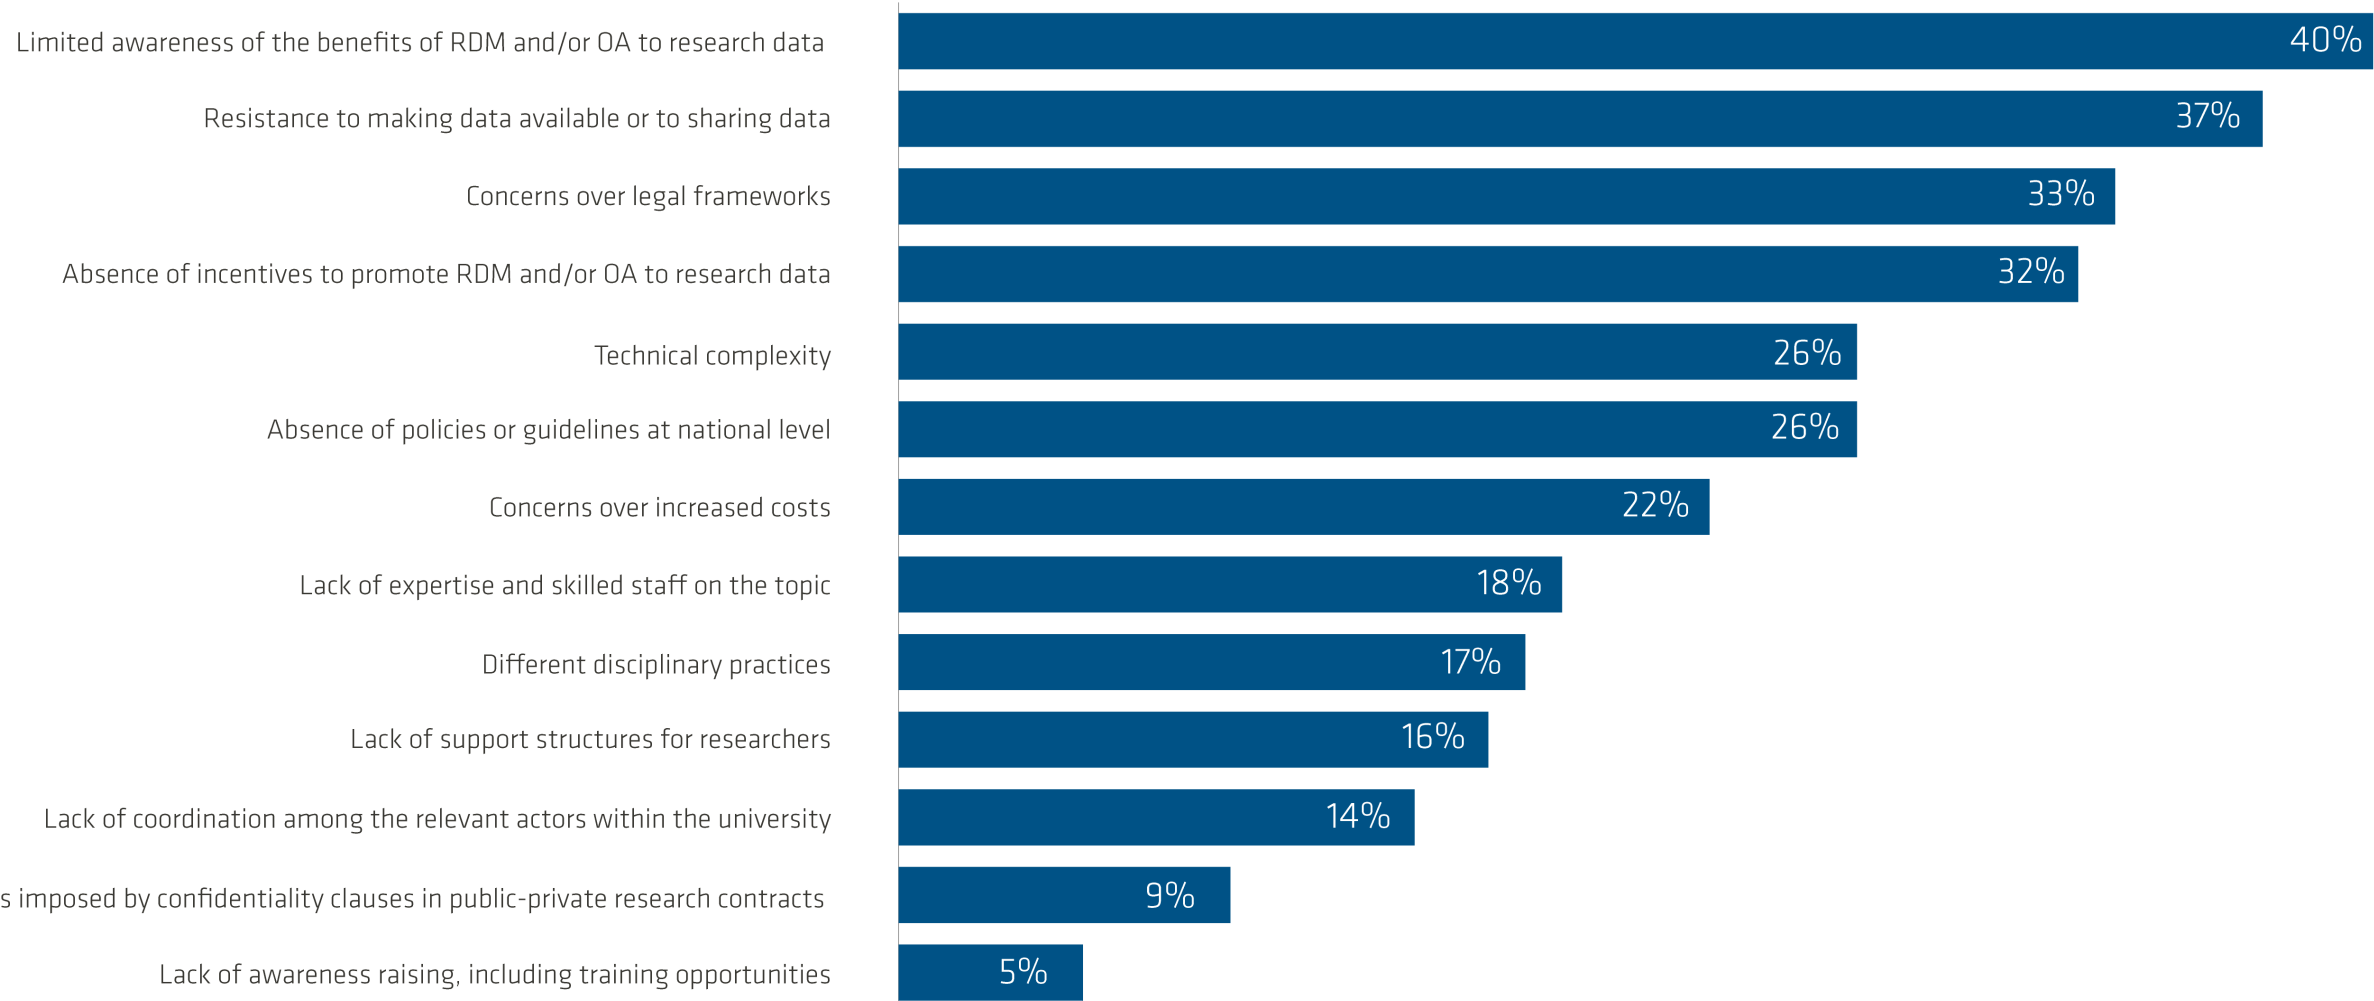

Number of respondents: 318/321

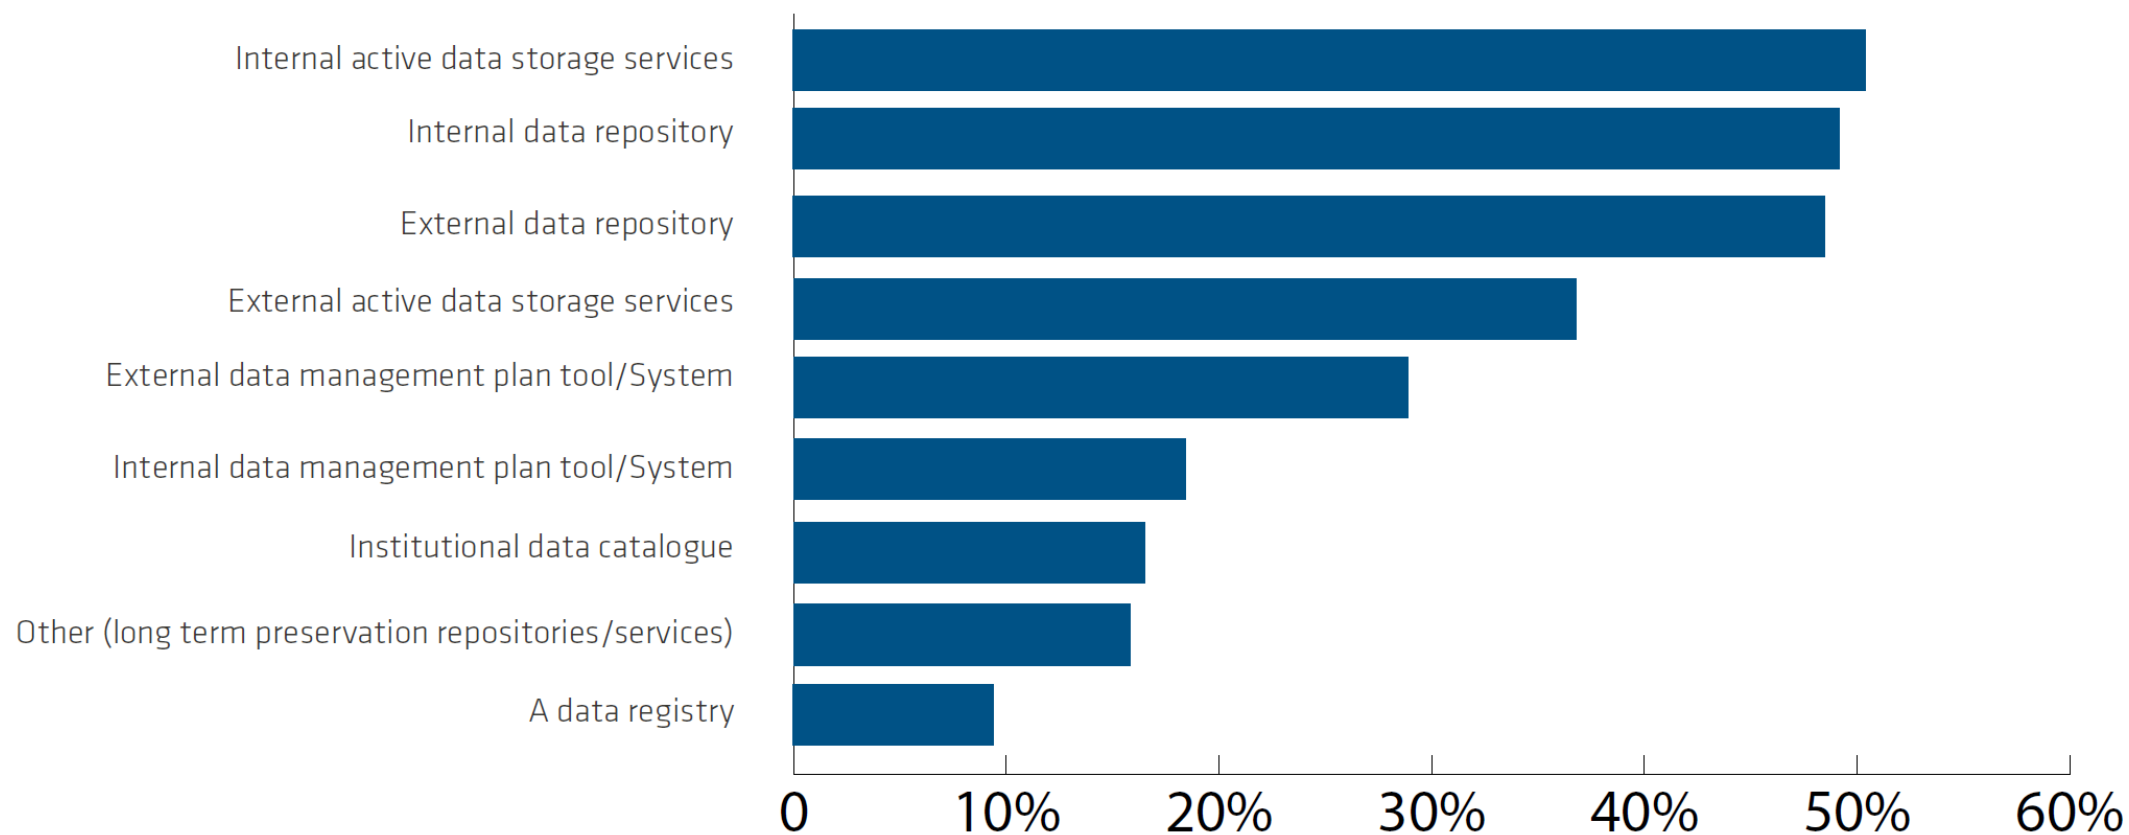

Level of skills supply to further develop RDM/OA to research data

Number of respondents: 316/321

Barriers to implementing RDM/OA to research data at institutional level

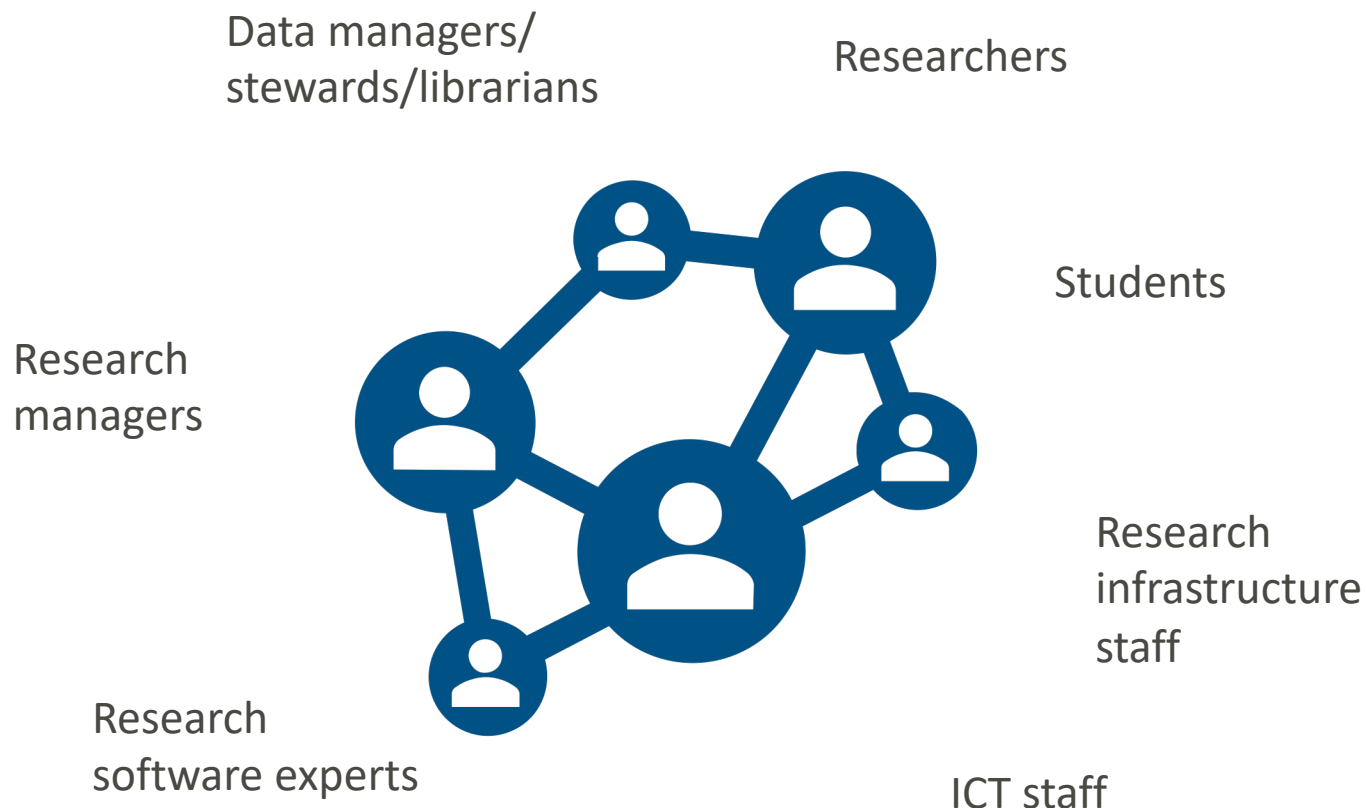

Number of respondents: 317/321

Technical infrastructure for RDM

Implications for EOSC

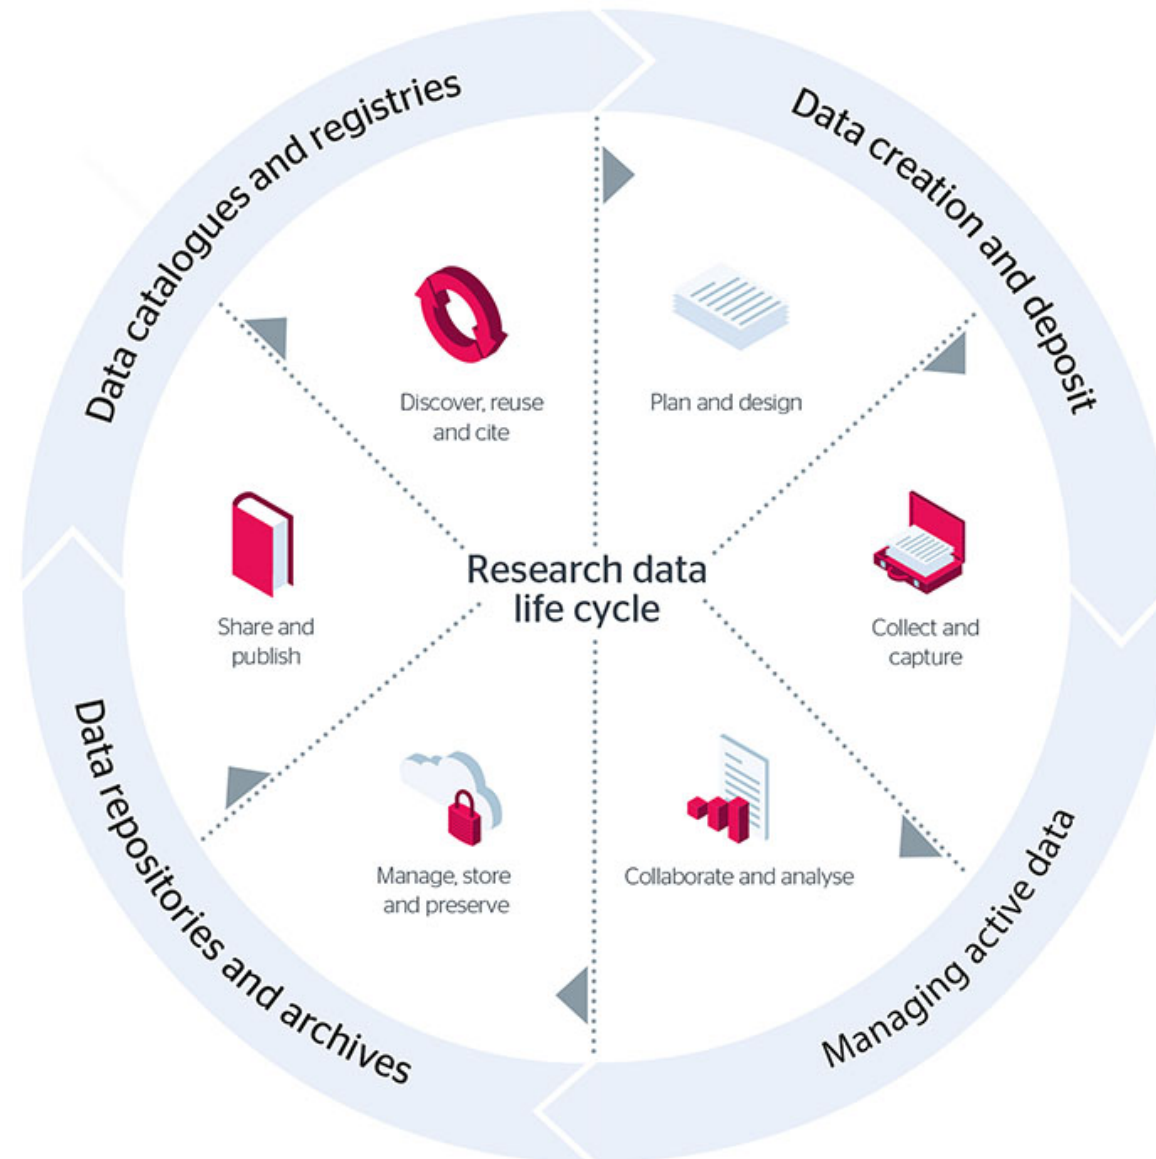

20 June 2019

Universities host
a range of
possible user
groups

... and probably more ...

Consider the research data life cycle

Source: Jisc, license: [CC BY-NC-ND](https://creativecommons.org/licenses/by-nc-nd/4.0/),
<https://www.jisc.ac.uk/blog/could-the-research-data-lifecycle-be-the-engine-to-drive-open-science-06-aug-2018>

EOSC should...

... offer a single point of entry – an efficient, simple and easy ‘one-stop shop’ for researchers and other types of user groups to retrieve and store data (SMEs, citizen scientists etc.)

... be simple enough that an individual researcher can access data, can use services to analyse existing data and deposit new data

... keep in mind that data support role are not always available for individual users or small organisations (e.g. SMEs)

... support measures and funding to up-/reskill researchers and professional staff for more complex interactions

Possible priorities

Move from “EOSC will do” to “EOSC does”

Data discovery through EOSCportal (metadata of services, search tools etc)

The portal doesn’t need a focus on policy and governance

Support for smaller repositories (e.g. Institutional) to be linked to EOSC

Find a user-centred design approach for EOSC across the projects

Thank you for your attention
