

Building a 21st century monitoring infrastructure

Thursday, 17 October 2019 09:00 (25 minutes)

The monitoring infrastructure used at the computing centre at DESY, Zeuthen aged over the years and showed more and more deficits in many areas.

In order to cope with current challenges, we decided to build up a new monitoring infrastructure designed from scratch using different open source products like Prometheus, Elasticsearch, Grafana, etc.

The talk will give an overview of our future monitoring landscape as well as a status report on where we are now, which challenges we hit and an outlook to further developments.

Speaker release

Yes

Desired slot length

15

Primary authors: HAUPT, Andreas (Deutsches Elektronen-Synchrotron (DESY)); BOLLE, Jan-Philipp (DESY)

Presenter: HAUPT, Andreas (Deutsches Elektronen-Synchrotron (DESY))
