

***Abstract sent to the EPS conference outreach parallel session ( 04/04/2019)***

### **ORIGIN-Mexico: an Art-Science exhibit for the LHCP 2019 conference**

ORIGIN is a network founded in January 2018 by several high energy & astrophysics collaborations and research centers. It builds on the art@CMS methodology to create and support events, exhibits and workshops where public engagement and education are enhanced by both art and science.

The exhibit setup in Puebla, Mexico, in parallel with the LHCP conference, will be used to illustrate how the integration of the 4 LHC collaborations and the ideas brought by local Art and Science university departments, schools and teachers lead to specific flavors, colors and developments. Pros and cons will be discussed, in comparison with prior and future ORIGIN projects.
