

NON-DESTRUCTIVE DETECTION OF MOLECULES WITHOUT MASS LIMITATION

ADRIEN POINDRON

JANUARY 2020

AN EXPERIMENTAL AND NUMERICAL PROJECT

The main purpose of this experiment is to develop an original detector for mass spectrometry.

GiantMol prototype

- Molecular source
- Ca^+ trap
- Laser cooling

Numerical simulations

- $\text{GMol} \rightarrow \text{Ca}^+$ interaction
- Molecular ion guiding through 80cm

AN EXPERIMENTAL AND NUMERICAL PROJECT

The main purpose of this experiment is to develop an original detector for mass spectrometry.

GiantMol prototype

- **Molecular source**
- **Ca⁺ trap**
- **Laser cooling**

Numerical simulations

- **GMoI \rightarrow Ca⁺ interaction**
- **Molecular ion guiding through 80cm**

AN EXPERIMENTAL AND NUMERICAL PROJECT

The main purpose of this experiment is to develop an original detector for mass spectrometry.

GiantMol prototype

- Molecular source
- Ca^+ trap
- Laser cooling

Numerical simulations

- **$\text{GMol} \rightarrow \text{Ca}^+$ interaction**
- Molecular ion guiding through 80cm

PRINCIPLE OF THE EXPERIMENT

The Giant Molecule crossing the ion cloud produces a perturbation which modifies the fluorescence.

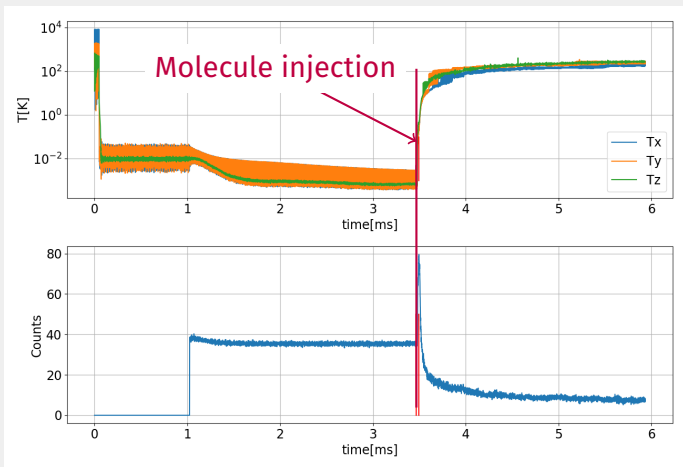

PRINCIPLE OF THE EXPERIMENT

Ion temperature and fluorescence during a simulated interaction.

PRINCIPLE OF THE EXPERIMENT

Ion temperature and fluorescence during a simulated interaction.

EXPERIMENTAL SETUP

MOLECULAR SOURCE - ELECTROSPRAY

Electrospray source positive mode (CC
Andreas Dahlin)

MOLECULAR SOURCE - ELECTROSPRAY

Electrospray source positive mode (CC
Andreas Dahlin)

Rayleigh stability
condition

$$Q^2 = 16\pi a_0^3 \sigma$$

MOLECULAR SOURCE - ELECTROSPRAY

Electrospray source positive mode (CC
Andreas Dahlin)

Rayleigh stability
condition

$$Q^2 = 16\pi a_0^3 \sigma$$

charge

MOLECULAR SOURCE - ELECTROSPRAY

Electrospray source positive mode (CC
Andreas Dahlin)

Rayleigh stability
condition

$$Q^2 = 16\pi a_0^3 \sigma$$

charge
surface tension

MOLECULAR SOURCE - ELECTROSPRAY

Electrospray source positive mode (CC
Andreas Dahlin)

Rayleigh stability
condition

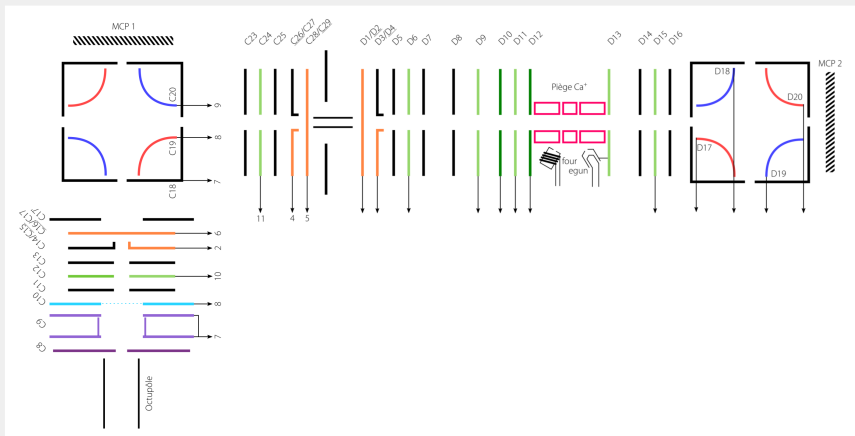

$$Q^2 = 16\pi a_0^3 \sigma$$

charge
surface tension

$$V = \frac{Q}{a_0}$$
$$= \sqrt{16\pi a_0 \sigma} \text{ (cgs)}$$

For a 1mm water
droplet $V \approx 6000V$

MOLECULAR SOURCE - ELECTROSPRAY

Electrode layout from octupole to MCP's.

MOLECULAR ION DETECTION HALFWAY

MOLECULAR ION DETECTION HALFWAY

DiBenzoCrown
Ether 360 a.m.u.

Pyridine 79
a.m.u.

MOLECULAR ION DETECTION HALFWAY

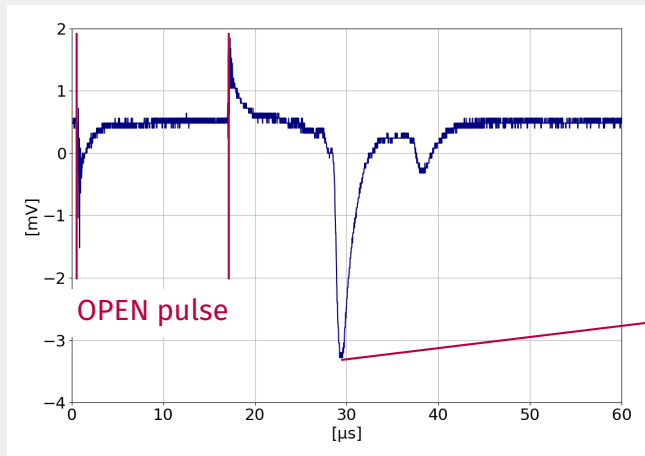

DiBenzoCrown
Ether 360 a.m.u.

Pyridine 79
a.m.u.

MOLECULAR ION DETECTION HALFWAY

DiBenzoCrown
Ether 360 a.m.u.

Pyridine 79
a.m.u.

MOLECULAR ION DETECTION HALFWAY

DiBenzoCrown
Ether 360 a.m.u.

Pyridine 79
a.m.u.

MOLECULAR ION DETECTION AFTER THE TRAP

Molecular ion count with MCP after the trap. 20 samples mean.

ION TRAPPING

Size and power supply for the quadrupolar trap.

ION TRAPPING

Potential between two rods

$$\Phi_r(x, y, t) = (V_{DC} + V_{RF} \cos(\Omega_{RF}t))$$

Motion equation (single ion)

$$0 = \ddot{u} + (a_u - 2q_u \cos 2\tau)u$$

$$\text{with } u = x, y \text{ and } \tau = \frac{\Omega_{RF}t}{2}$$

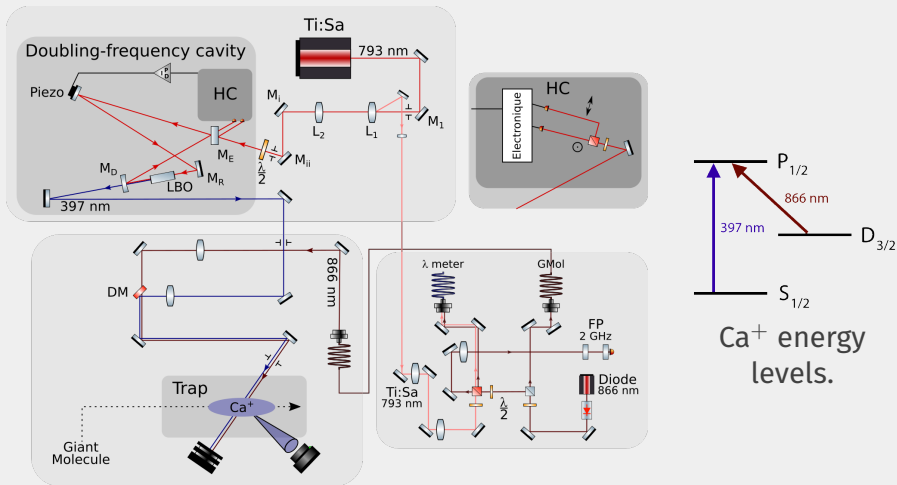

$$a_x = -a_y = \frac{4eU_{DC}}{mr_0^2\Omega_{RF}^2}$$

$$\text{and } q_x = -q_y = \frac{2eU_{RF}}{mr_0^2\Omega_{RF}^2}$$

Stability diagram for the quadrupolar linear trap.

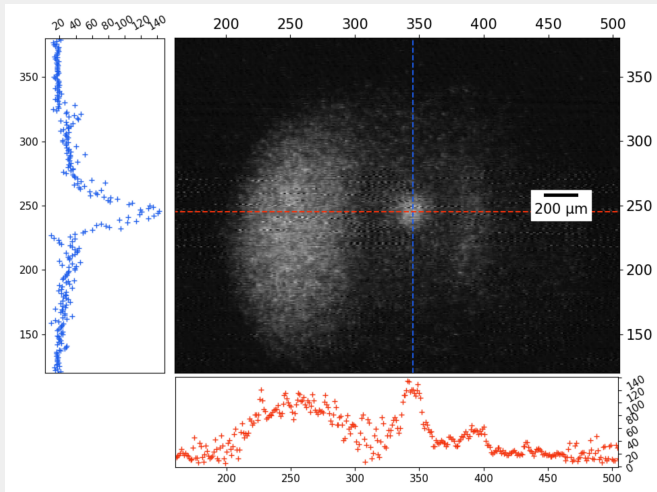

LASER COOLING

Laser cooling setup.

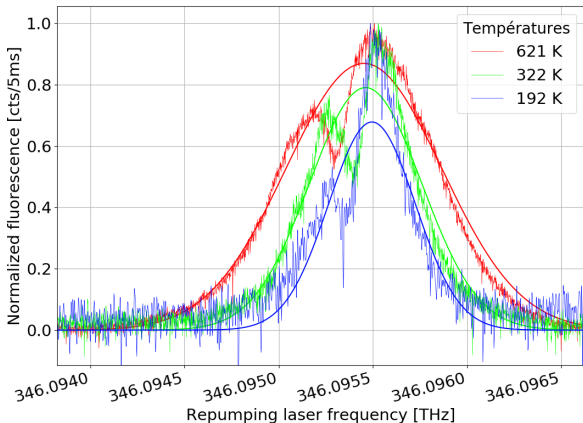

Ca⁺ CLOUD PROFILE

Ion cloud with profile and scalebar.

Ca⁺ CLOUD TEMPERATURE

Three different fluorescence profiles for three red laser scans.
Narrower the curve, colder the cloud.

INTERACTION SIMULATION

DETECTION SIGNAL

Detection signal as a *significant* fluorescence evolution.

DETECTION SIGNAL

Detection signal as a *significant* fluorescence evolution.

DETECTION SIGNAL

Thermal bath

Detection signal as a *significant* fluorescence evolution.

DETECTION SIGNAL

Detection signal as a *significant* fluorescence evolution.

DETECTION SIGNAL

Detection signal as a *significant* fluorescence evolution.

DETECTION SIGNAL

Detection signal as a *significant* fluorescence evolution.

DETECTION SIGNAL

Detection signal as a *significant* fluorescence evolution.

DETECTION SIGNAL

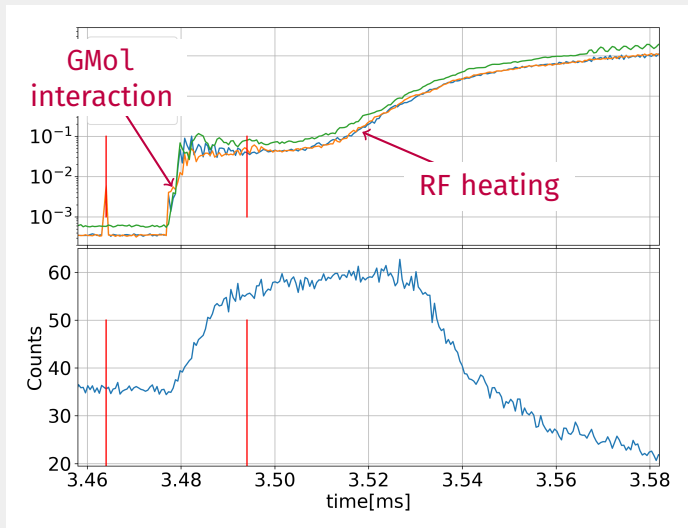

Fluorescence variation not significant enough to provide a molecule detection.

DETECTION SIGNAL

Detection signal (focus on the post-injection dynamic).

DETECTION SIGNAL

Detection signal (focus on the post-injection dynamic).

INTERACTION SIMULATION

SYSTEMATIC STUDY

SYSTEMATIC STUDY

> Atoms

$n_{ionsC_a^+}$ ✗ 1024 ions

m_{GMol} ✗ 1 *Mamu*

E_{GMol} ✗ 50 eV ($\approx 100m/s$)

q_{Mol} ✗ 1 C

> Voltages

$V_{RF}|q_r$ ✓

$V_{ST}|a_r$ ✗ 0 V

$U_{DC}|a_z$ ✓

> Simulation parameters ✗

> Laser

detuning ✗ $-\Gamma$ @ 397nm

saturation ✗ $S = 1$

SYSTEMATIC STUDY

Fluorescence progression for different axial voltages. Molecular mass 1 Mamu.

SYSTEMATIC STUDY

Fluorescence progression for different axial voltages. Molecular mass 1 Mamu.

SYSTEMATIC STUDY

Detection efficiency as the relative fluorescence variation for different values of two parameters.

SYSTEMATIC STUDY

Detection efficiency as the relative fluorescence variation for different values of two parameters.

INTERACTION SIMULATION

FOCUS ON THE $q_r = 0.6$ DATA

STATISTICAL ANALYSIS FOR FLUORESCENCE PROGRESSION

MOLECULAR ION ENERGY LOSS

Energy loss histogram for molecular ion after interaction with Ca^+ ion cloud.

MOLECULAR ION BEHAVIOUR

Molecular ion trajectory inside the Ca⁺ ion cloud.

CONCLUSION

- Better comprehension of the experimental parameters influence, thanks to simulations *and* experiments;

CONCLUSION

- Better comprehension of the experimental parameters influence, thanks to simulations *and* experiments;
- Necessity to work on other elements such as laser cooling, GMoI incidence, energy charge and mass;

CONCLUSION

- Better comprehension of the experimental parameters influence, thanks to simulations *and* experiments;
- Necessity to work on other elements such as laser cooling, GMoL incidence, energy charge and mass;
- Get closer to nominal operating conditions : increase molecular ion mass, produce a detection via Ca^+ ion cloud.

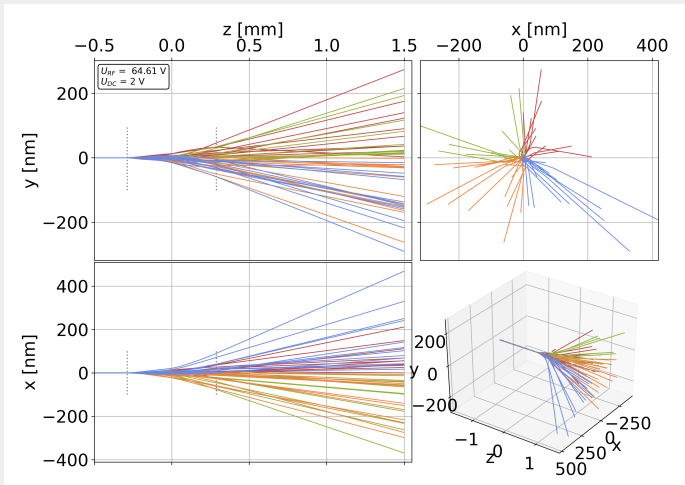

MOLECULAR ION BEHAVIOUR

$$U_{RF} = 64.61 \text{ V}$$

$$U_{DC} = 3.5 \text{ V}$$

MOLECULAR ION BEHAVIOUR

Detailed trajectories for all reproduction of one condition.
