

# Using ionizing radiation in medical field « radioactivity »

DETECTOR

**Pr R. SEBIHI**  
**Medical Physicist**  
**Mohamed V university,**  
**faculty of Sciences, Rabat**

# Radiation

DÉCHETS NUCLÉAIRES

**Le Mox caché  
de la Hague**

# Radiations

Electromagnetic  
radiation

**James Maxwell**

Nuclear  
radiation

**Marie Curie**

# Electromagnetic radiation

# Electromagnetic radiation

# Nuclear Radiations

Carbon

Stable atom

# Nuclear radiations

Carbon 14

**Unstable atom:  
radiative**

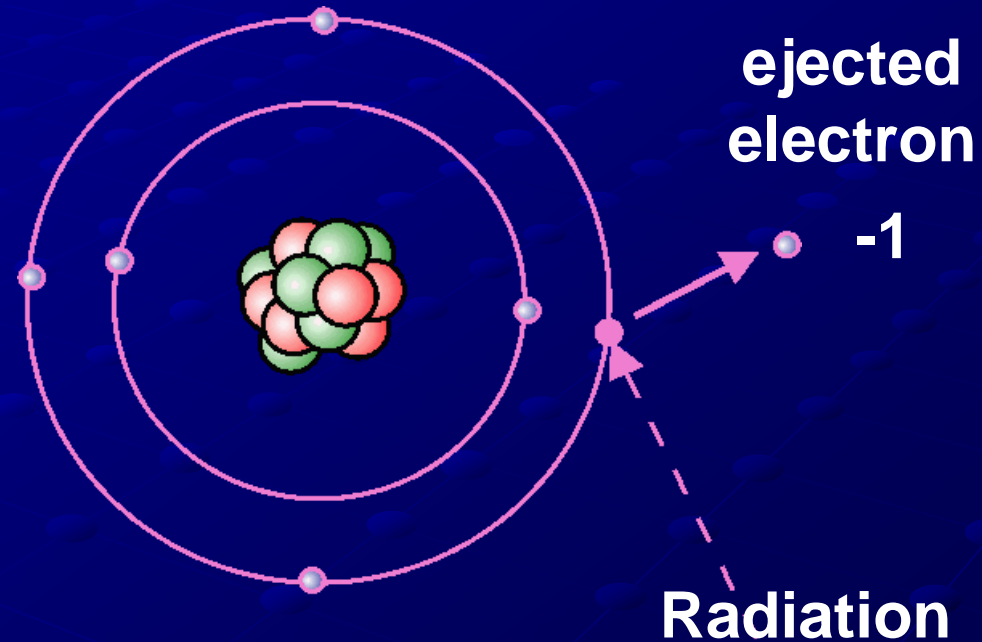

## Isotope:

An atom with the same number of protons but  
a different number of neutrons

# Ionizing radiations

Ionized Atom +1

**Ionization:**

Turning a **neutral** atom into an ion

# 3 Types of Nuclear radiations

A white circle containing the Greek letter alpha ( $\alpha$ ), representing alpha radiation.A white circle containing the Greek letter beta ( $\beta$ ), representing beta radiation.A white circle containing the Greek letter gamma ( $\gamma$ ), representing gamma radiation.

# Beta decay

**Beta**  
**A high speed electron**

# Alpha decay

Alpha  
A helium nucleus

# Gamma decay

Uranium 238

Gamma radiation always occurs  
along side Alpha or Beta

# Ionization

# Alpha rays

Alpha is the best  
at ionising

Alpha travel in the atom

# Beta rays

Beta is the next best  
at ionising

$\beta^-$

# Gamma rays

Gamma is the worst  
at ionising

Gamma no charge

# Absorption

# Absorption

# Absorption

 $\alpha$ 

A few cm

 $\beta$ 

Several metres

 $\gamma$ 

Several km

Lead Atoms

 $\alpha$  $\beta$  $\gamma$ 

# Nuclear medicine

# Nuclear medicine

# Scintigraphy

# NUCLEAR MEDICINE

# Different kind of radioisotopes produced by nuclear reactors or cyclotrons

## PREPARATION

**REACTOR**

**CYCLOTRON**

## DISTRIBUTION

**SOLUTION**

**SOLID FORM**

**GENERATOR**

## USE ON SITE

**AUTHORISED USER**

**NUCLEAR MEDICINE  
DOCTOR**

# The main radioisotope used in NM... $^{99m}\text{Tc}$

- $\gamma$  Emission : 140 keV
- Short Half-life: 6 h  
(adapted to the kinetic for diagnostic)
- Good chemical characteristics
- Easy to prepare and to distribute
- Linked to different molecules with specific properties

**Ideal also for radioactive waste management !**

# PET Tracer ( $^{18}\text{F}$ -FDG (Fluorodeoxyglucose))

●  $^{18}\text{F}$  fixed to an organic molecule

Short half-life ( $T_{1/2} = 1,83 \text{ h}$ ),  
High Energy of X-rays

- High dose rate compared to  $^{99\text{m}}\text{Tc}$  →
- to be considered for waste management

$^{131}\text{I} \Rightarrow T_{1/2} = 8 \text{ days} !!$

Thyroid Therapy

# Nuclear medicine uses unsealed sources for diagnosis and therapy

DETECTOR

$^{99m}\text{Tc}$ ,  $^{18}\text{F}$ ,  $^{123}\text{I}$ ,  $^{131}\text{I}$ ,  $^{111}\text{In}$ ,  
 $^{201}\text{Tl}$ ,  $^{51}\text{Cr}$ ,  $^{153}\text{Sm}$ ,  $^{90}\text{Y}$  .....

The use of unsealed sources will generate radioactive waste of different kinds during many different phases

# Why management of radioactive waste from nuclear medicine is so important?

## Radioactivity

- is not observable...
- has a negative image....
- Induces some risk for the people and the environment

Radioactive waste should be strictly managed

## Basic principles

- Try to keep minimum waste
- Try to be practicable
- To provide an acceptable level of protection for
  - human health
  - Environment

Short lived radioactive waste could be managed directly in the hospital

« Nothing in life is to be feared, it's only to be understood. Now is the time to understand more, so that we may fear less »
