

# Analysis Tools in the 2020's and 2030's

G. WATIS (UW/SEATTLE)

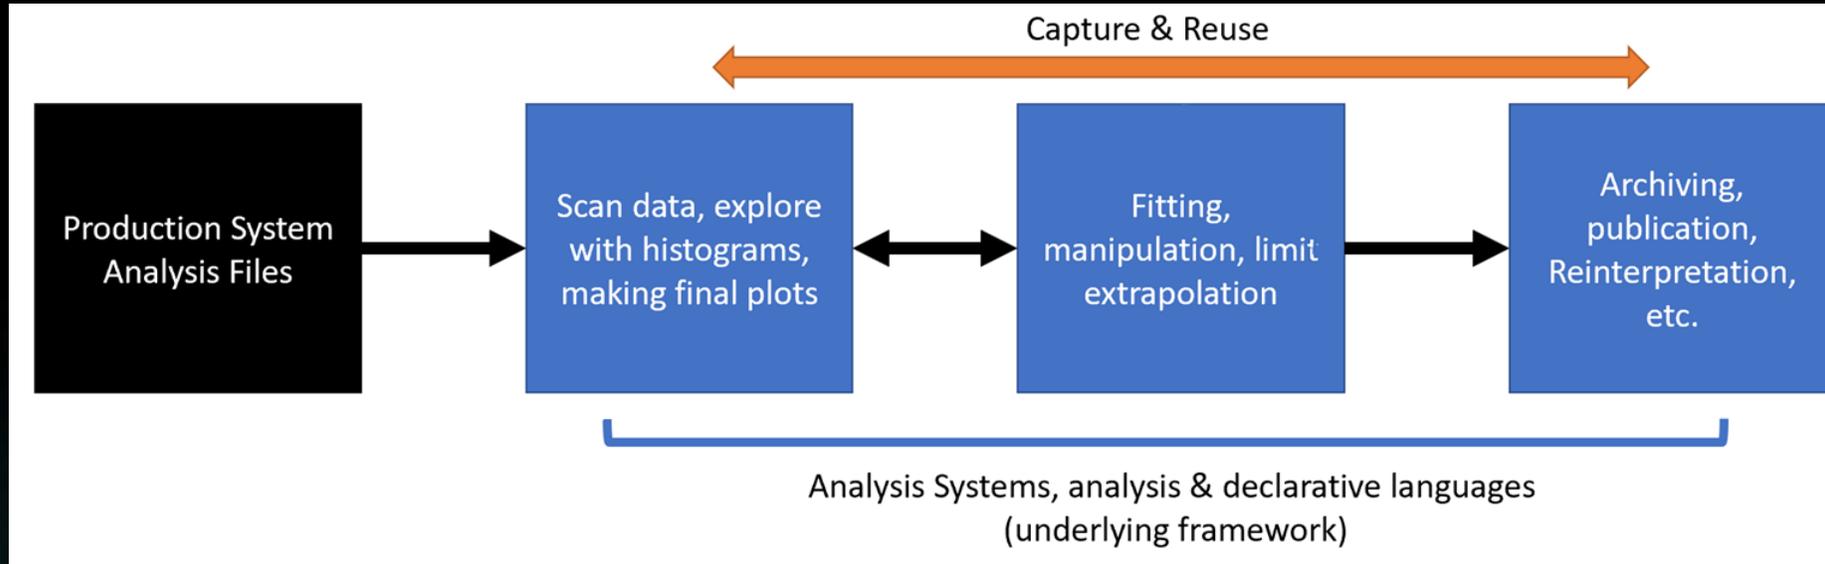

2020's

2030's

# What Do We Need To Do?

- Build Histograms
- Cut & Count datasets
- Craft good-looking histograms
- Fitting of histograms to complex fractions
- Systematic Error propagation and studies
- Building of complex signal and background
- models with control regions
- Machine Learning Training & use of ML fits in event selection
- Reuse of an existing analysis w/new Signal
- Archiving of results (HEPData, etc.)

A dark, textured sphere is the central focus, surrounded by a complex network of glowing blue lines that crisscross and loop around it. The lines vary in thickness and brightness, creating a sense of dynamic movement and connectivity. Several text labels are scattered across the scene, including 'CA 83-0618' on the left, 'BC 7A-8224' near the sphere, 'JC 11-0825' on the right, and 'AC 81-8203' at the bottom right. The background is a dark, deep blue with faint, concentric circular patterns.

The Future We Know

## 3 Meeting the Challenges

[arxiv:1712.07959](https://arxiv.org/abs/1712.07959)

## Software Sustainability

<b>3.1</b>	<b>Effective use of developer effort</b>	<b>6</b>
3.1.1	Design documentation and training	6
3.1.2	Standard development tools	7
3.1.3	Development environment	8
3.1.4	Social coding sites	9
3.1.5	Continuous integration	9
3.1.6	Code review	9
3.1.7	Agile development	9
<b>3.2</b>	<b>Knowledge sharing</b>	<b>11</b>
3.2.1	Documentation	11
3.2.2	Training	11
3.2.3	Seminars and discussion forums	11
3.2.4	Workshops and community reviews	12
3.2.5	Conferences	12
3.2.6	Journal publication	13
<b>3.3</b>	<b>Reusing code effectively</b>	<b>13</b>
3.3.1	Software Licenses	13
<b>3.4</b>	<b>Validation of complex outputs</b>	<b>14</b>
<b>3.5</b>	<b>Data and code preservation</b>	<b>14</b>
<b>3.6</b>	<b>Code deprecation</b>	<b>15</b>
<b>3.7</b>	<b>Hardware and software evolution</b>	<b>15</b>
3.7.1	Effective exploitation of parallel hardware	15
3.7.2	Achieving performance portability	16
3.7.3	Tracking of new software technologies and tools	17
3.7.4	Dealing with hardware diversity	17
<b>3.8</b>	<b>Software deployment</b>	<b>17</b>
<b>3.9</b>	<b>Recognition of software development</b>	<b>18</b>

Example sample sizes:

		MC16e	data18
AOD	logical [PB]	11.2	2.7
	disk [PB]	13.0	4.2
	evt [ $10^9$ ]	17.178	12.108
DAOD	logical [PB]	9.9	6.1
	disk [PB]	13.4	12.7
	evt [ $10^9$ ]	91.292	110.139

Top 10 DAOD:

DAOD_TOPQ1	10.10 PB
DAOD_STDM4	3.57 PB
DAOD_TOPQ4	3.40 PB
DAOD_FTAG4	3.27 PB
DAOD_RPVLL	3.10 PB
DAOD_HIGG2D1	2.41 PB
DAOD_JETM6	2.08 PB
DAOD_FTAG1	1.98 PB
DAOD_JETM1	1.97 PB
DAOD_EXOT5	1.80 PB

Run3: Initial assumption resources will be:  $1.5 \times$  (resources in 2018) Consistent with "flat budget"

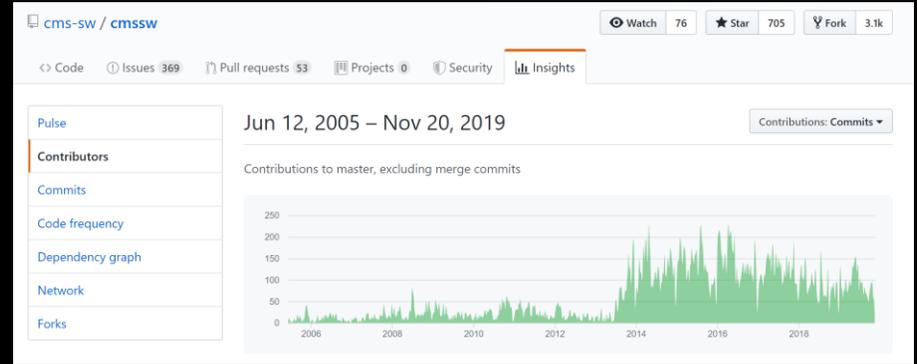

So Run 3 isn't a huge problem...

# VERY SIMPLE HL-LHC EXTRAPOLATION FOR DISK

	MC			Data			Sum
	AOD	DAOD	DAOD PHYSLITE	AOD	DAOD	DAOD PHYSLITE	
events (25-28)	$6.4 \cdot 10^{11}$			$1.5 \cdot 10^{11}$			
events / year	$2.13 \cdot 10^{11}$	$1.07 \cdot 10^{12}$	$2.13 \cdot 10^{11}$	$5.0 \cdot 10^{10}$	$2.5 \cdot 10^{11}$	$5.0 \cdot 10^{10}$	
size/event [kB]	1000	100	10	700	50	10	
disk [PB/year]	213.3	106.7	2.1	35.0	12.5	0.5	369.6

This will be a problem, however...

(Taken from Johannes' CHEP talk)

PYTORCH

TensorFlow

What we'd  
like in 2026...

All those tools to talk to each other!

The Different ecosystems living comfortably with each other

Time between “Make me a plot of  $Z \rightarrow ee$ ” till  
your new student gives you the plot measured in  
days, not weeks.

Your quick plotting methods are easily  
convertible to production quality analysis that is  
reusable. Same framework.

# Bridges & Ferries

Take the best advantage of all the tools out there

Awkward  
Array

uproot

RDataFrame can  
convert to numpy  
arrays, read arrow

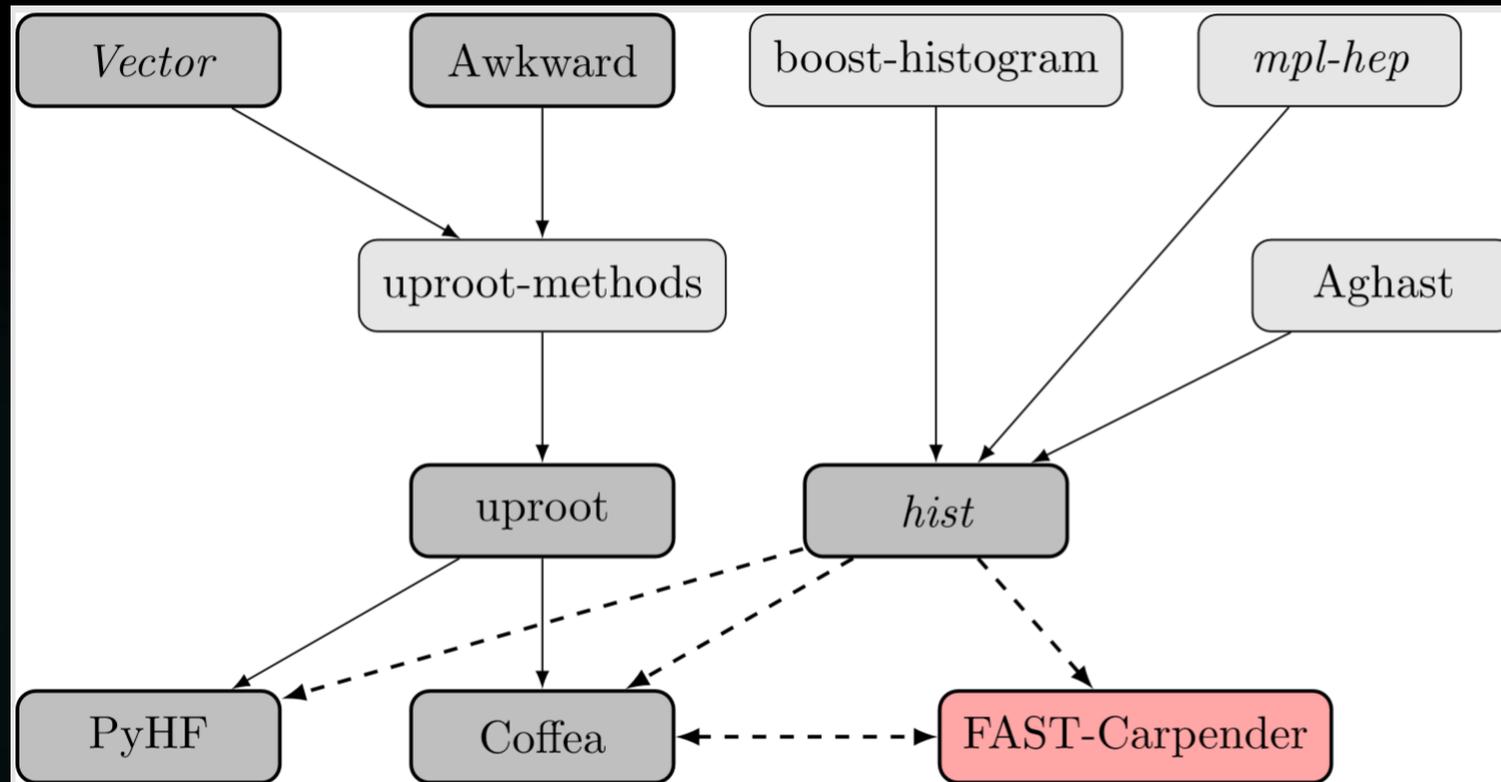

We have to get away from  
all the hand-art our analysis  
currently requires!

- Training to C++?
- New ROOT NTuple

# Histograms in the Python Ecosystem

16

# Analysis Facility

17

Can I get all **electrons** from the  
`mc15_13TeV.361106.PowhegPythia8EvtGen_AZNLOCTEQ6L1_Zee.merge.DA  
OD_STDM3.e3601_s2576_s2132_r6630_r6264_p2363_tid05630052_00`  
dataset, and plot the  $Z \rightarrow e^+e^-$  mass?

- The dataset is an ATLAS xAOD dataset (standard analysis format)
  - Not a flat ntuple
- It is stored in the GRID (as all ATLAS analysis xAOD's are)

BTW, make this  
work for ATLAS,  
CMS, LHCb, etc...  
(using their own  
idioms)

# Why Not This?

## Fetching the data [From a Jupyter Notebook \(on GitHub\)](#)

```
In [6]: ds = EventDataset('localds://mc15_13TeV.361106.PowhegPythia8EvtGen_AZNLOCTEQ6L1_Zee.merge.DAOD_STDM3.e3601_s2576_s2132_r6630_r6264_p2363_tid05630052_00')
```

Dataset

```
In [7]: leptons_per_event_as = ds \
        .Select('lambda e: (e.Electrons("Electrons"), e.Muons("Muons"))') \
        .Select('lambda ls: (ls[0].Select(lambda e: e.pt()), ls[0].Select(lambda e: e.eta()), ls[0].Select(lambda e: e.phi()), ls[0].Select(lambda e: e.e()), ls[1].Select(lambda m: m.pt()), ls[1].Select(lambda m: m.eta()), ls[1].Select(lambda m: m.phi()), ls[1].Select(lambda m: m.e()))') \
        .AsAwkwardArray(('ElePt', 'EleEta', 'ElePhi', 'EleE', 'MuPt', 'MuEta', 'MuPhi', 'MuE')) \
        .future_value(executor=lambda a: use_exe_func_ad1_server(a, node=end_point, quiet=False))
```

Fetch the data for electrons

```
In [8]: leptons_per_event = await leptons_per_event_as

Files that were returned:
['file:///C:\\Users\\gordo\\Documents\\func-ad1-cache/40ae9bb8bd6cf8bcb7ae703c715939d7/ANALYSIS_001.root', 'pandas_tree28']
```

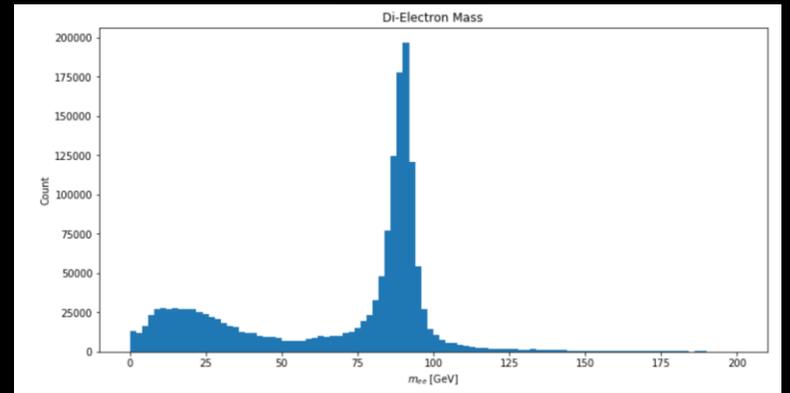

Invariant Mass

```
In [15]: v_particles = uproot_methods.TLorentzVectorArray.from_ptetaphi(
        leptons_per_event[b'ElePt'], leptons_per_event[b'EleEta'],
        leptons_per_event[b'ElePhi'], leptons_per_event[b'EleE'],
        )
```

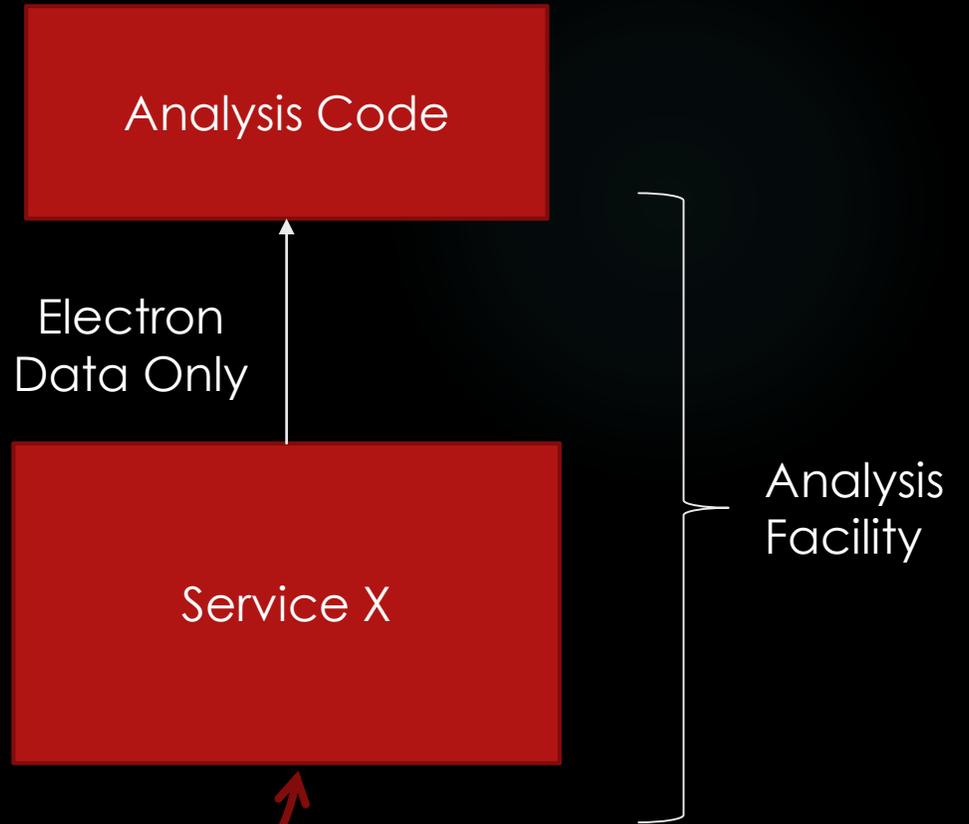

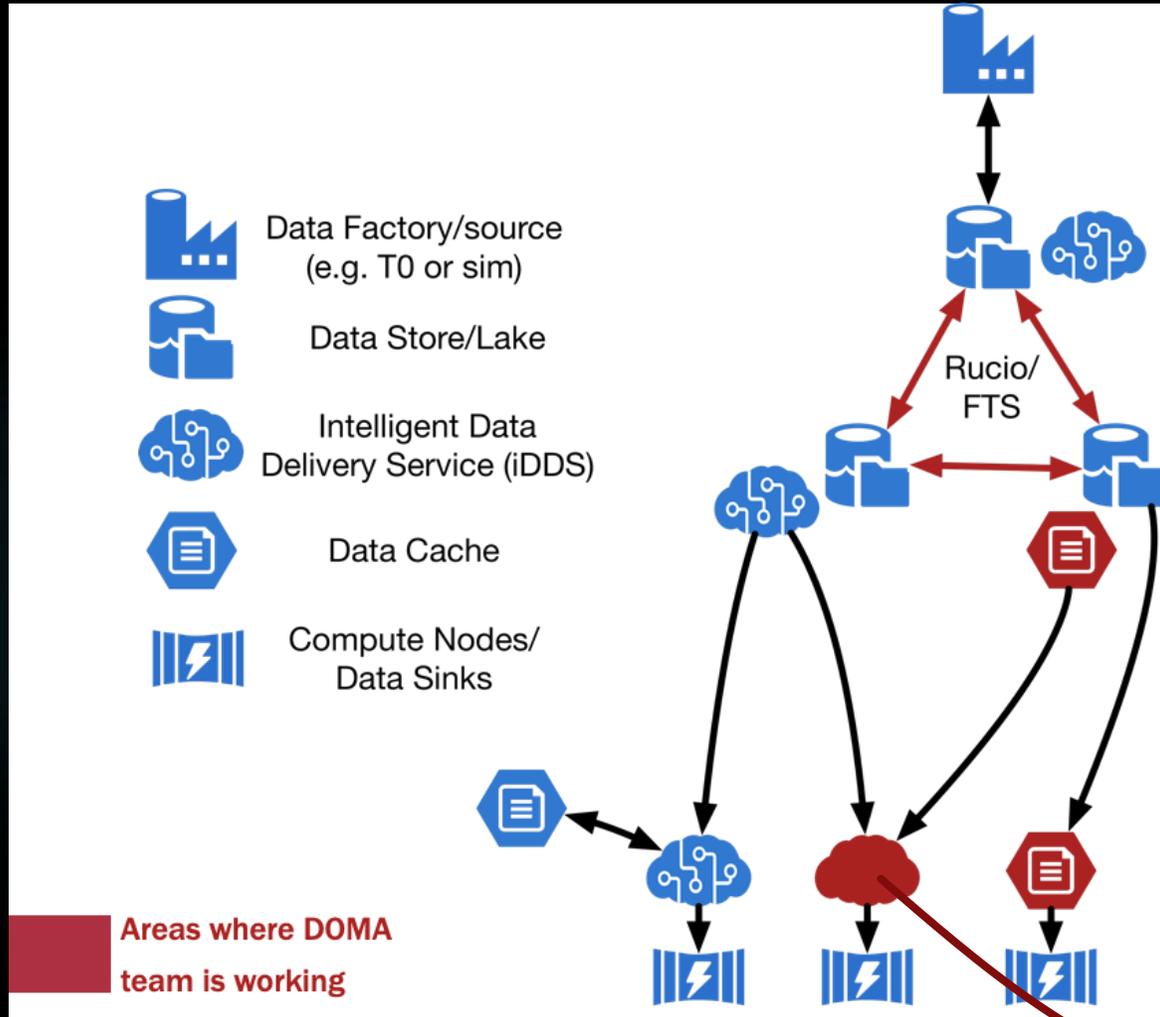

Plot

```
In [17]: v_particles = v_particles[v_particles.counts >= 2]
        diparticles = v_particles[:, 0] + v_particles[:, 1]
```

```
In [39]: plt.figure(figsize=(12, 6))
        plt.hist(diparticles.mass/1000.0, bins=100, range=(0,200))
        plt.title('Di-Electron Mass')
        plt.xlabel('$m_{ee}$ [GeV]')
        plt.ylabel('Count')
        plt.show()
```

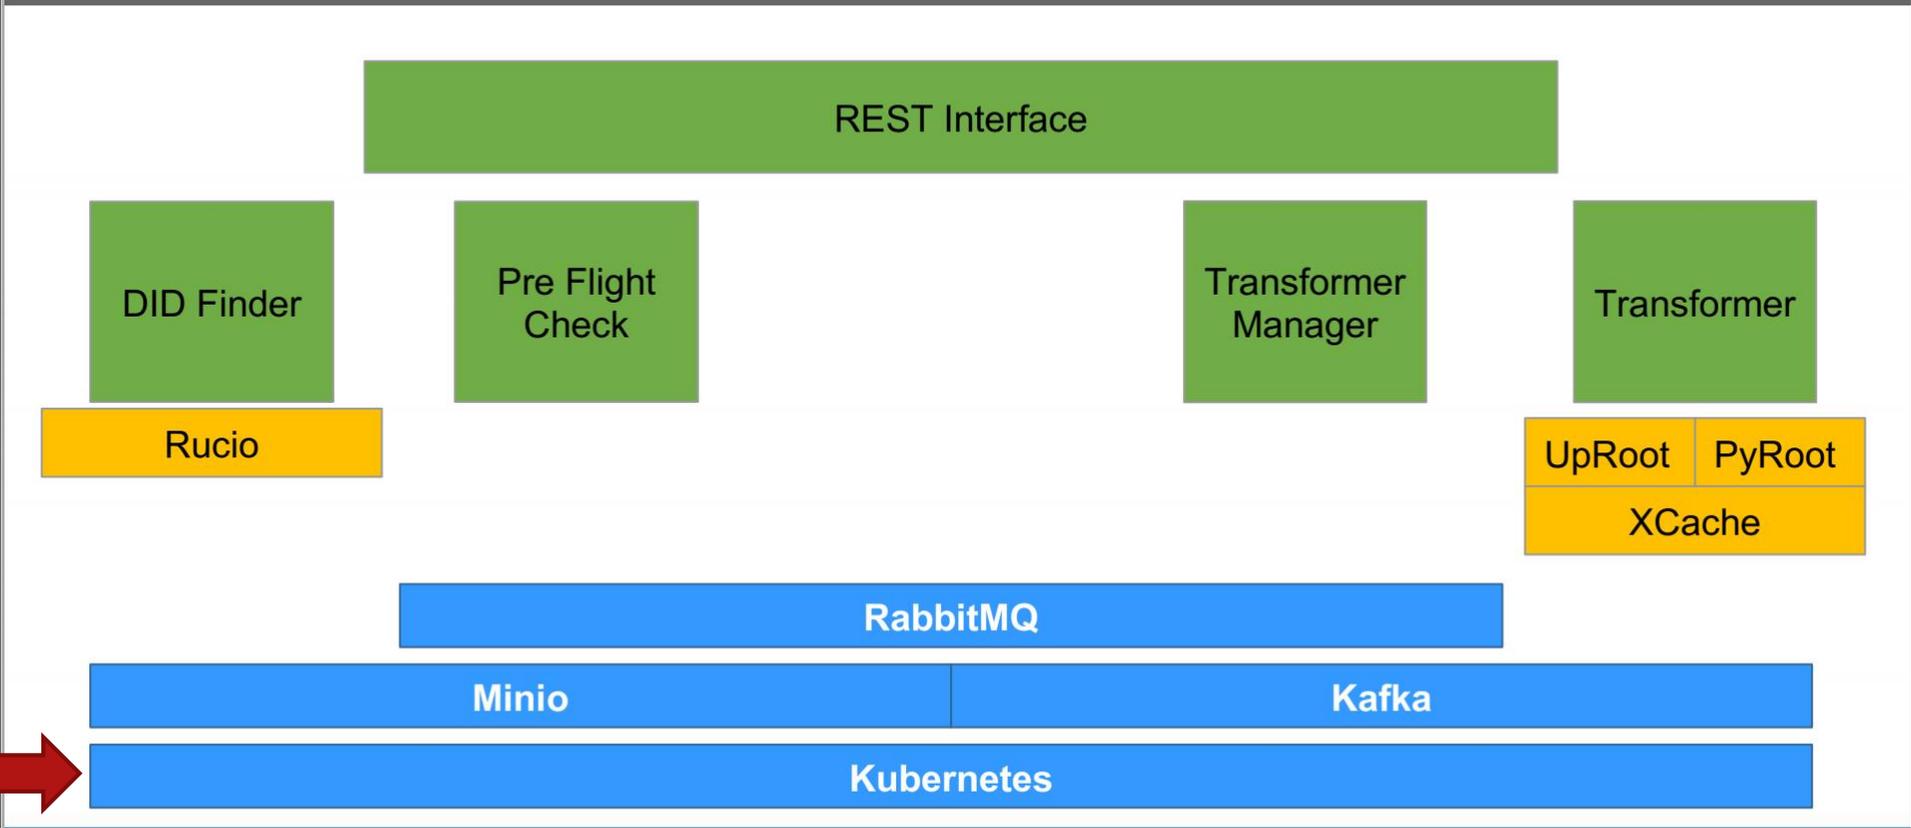

# A Simple Step at a Time

# Service Architecture V1

This effort is just getting started...

# Reproducible Analyses

21

## Describe

```
...
steps:
  analyse_data:

## Extensible

Do you have an institutional HPC system? Plug it easily .

... depending on the compute cluster:

Python bindings  
+ Kerberos

Python API client +  
token based auth

SSH to headnode

How to connect to  
your HPC cluster?

# Can we build out of well tested parts?

 **reana** is ...

<p><b>Flexible</b></p> <p>Run many computational workflow engines.</p> <p> COMMON WORKFLOW LANGUAGE </p>	<p><b>Scalable</b></p> <p>Support for remote compute clouds.</p> <p> <b>kubernetes</b></p>
<p><b>Reusable</b></p> <p>Containerise once, reuse elsewhere. Cloud-native.</p> <p> </p>	<p><b>Free</b></p> <p>Free Software. MIT licence. Made with ❤️ at CERN.</p> <p></p>

# End Game

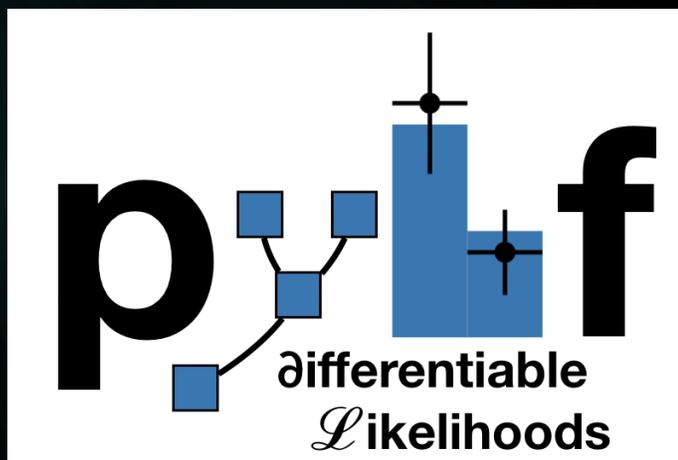

23

Once we have a story for getting our distributions and ML out of the data...

How do we complete the analysis?  
And in a way that works with the other components?

RooStats → TF/PyTorch fitting  
10 hours → 30 minutes

## TRExFitter

High level profile fitting language

How do we put together an ecosystem of tools that work across languages and experiments?

# Proper Role For Jupyter?

24

Tutorials and Training

Quick Studies and cross checks

Full Analysis end-to-end

# Conclusions

25

- ▶ I have missed a lot!!
  - ▶ ML MC tools I mentioned yesterday, for example
  - ▶ To get ideas of other projects, see the [Analysis Systems home page](#)
  - ▶ See the white papers for some of the things that were discussed
    - ▶ [Analysis eco-system workshop at AMS](#)
- ▶ Building Software from Existing Components
  - ▶ E.g. Distributed computing is the lifeblood of the real world (Netflix, Microsoft, Amazon, Apple, etc.)
    - ▶ Should we ever write the plumbing again?
  - ▶ Open Source Package managers make a lot of people's work available for us, and us to make it available to them.
- ▶ Building a coherent ecosystem
  - ▶ This is just getting started...
  - ▶ And end-to-end analysis in a coherent way (CI??).
