

Multiplet bases – why and why not?

Stefan Keppeler

Department of Mathematics, University of Tübingen

PSR 19 Vienna

**You know nothing
about parton showers and resummation,
Jon Snow.**

I drink and I know things
...about multiplet bases.

► QCD process

- ▶ QCD process

- ▶ colour structure: invariant tensor

- ▶ QCD process

- ▶ **colour structure**: invariant tensor
- ▶ total amplitude as linear combination of colour structures requires basis of invariant tensors

- ▶ QCD process

- ▶ **colour structure**: invariant tensor
- ▶ total amplitude as linear combination of colour structures requires basis of invariant tensors
- ▶ construct a **multiplet basis**

Constructing multiplet bases

Constructing multiplet bases

- ▶ project to **irreps** on both sides

Constructing multiplet bases

- ▶ project to **irreps** on both sides
- ▶ **Schur's Lemma**: colour structure maps only irreps to equivalent irreps
- ▶ construct **transition operators**

Constructing multiplet bases

- ▶ project to **irreps** on both sides
- ▶ **Schur's Lemma**: colour structure maps only irreps to equivalent irreps
- ▶ construct **transition operators**

Most work goes into first step: **constructing projectors**.

Multiplet bases are . . .

- ▶ orthogonal & minimal.

Multiplet bases are...

- ▶ orthogonal & minimal.

... as opposed to trace or colour flow bases which are

- ▶ non-orthogonal & overcomplete.

Illustration: soft anomalous dimension matrix for $gg \rightarrow gg^1$

$$\frac{\alpha_s C_A}{\pi} \begin{pmatrix} T & 0 & 0 & 0 & 0 & 0 & -\frac{U}{N_c} & \frac{T-U}{N_c} & 0 \\ 0 & U & 0 & 0 & 0 & 0 & 0 & \frac{U-T}{N_c} & -\frac{T}{N_c} \\ 0 & 0 & T & 0 & 0 & 0 & -\frac{U}{N_c} & \frac{T-U}{N_c} & 0 \\ 0 & 0 & 0 & (T+U) & 0 & 0 & \frac{U}{N_c} & 0 & \frac{T}{N_c} \\ 0 & 0 & 0 & 0 & U & 0 & 0 & \frac{U-T}{N_c} & -\frac{T}{N_c} \\ 0 & 0 & 0 & 0 & 0 & (T+U) & \frac{U}{N_c} & 0 & \frac{T}{N_c} \\ \frac{T-U}{N_c} & 0 & \frac{T-U}{N_c} & \frac{T}{N_c} & 0 & \frac{T}{N_c} & 2T & 0 & 0 \\ -\frac{U}{N_c} & -\frac{T}{N_c} & -\frac{U}{N_c} & 0 & -\frac{T}{N_c} & 0 & 0 & 0 & 0 \\ 0 & \frac{U-T}{N_c} & 0 & \frac{U}{N_c} & \frac{U-T}{N_c} & \frac{U}{N_c} & 0 & 0 & 2U \end{pmatrix}$$

9×9
trace basis

$$\left(\frac{\alpha_s}{\pi} \begin{pmatrix} N_c T & 0 & 0 \\ 0 & N_c U & 0 \\ 0 & 0 & N_c (T+U) \end{pmatrix} \begin{pmatrix} 6T & 0 & -6U & 0 & 0 \\ 0 & 3T + \frac{3U}{2} & -\frac{3U}{2} & -3U & 0 \\ -\frac{3U}{4} & -\frac{3U}{2} & 3T + \frac{3U}{2} & 0 & -\frac{9U}{4} \\ 0 & -\frac{6U}{5} & 0 & 3U & -\frac{9U}{5} \\ 0 & 0 & -\frac{2U}{3} & -\frac{4U}{3} & -2T + 4U \end{pmatrix} \right)$$

8×8
multiplet basis

quarks only (or anti-quarks only)

- ▶ (conventional) Young operators are not Hermitian
 \rightsquigarrow do not yield orthogonal bases

$$Y_{\begin{array}{|c|c|} \hline 1 & 2 \\ \hline 3 & \\ \hline \end{array}} = \frac{4}{3} \begin{array}{c} \text{---} \\ \text{---} \\ \text{---} \\ \text{---} \end{array} \begin{array}{c} \text{---} \\ \text{---} \\ \text{---} \\ \text{---} \end{array}, \quad Y_{\begin{array}{|c|c|} \hline 1 & 3 \\ \hline 2 & \\ \hline \end{array}} = \frac{4}{3} \begin{array}{c} \text{---} \\ \text{---} \\ \text{---} \\ \text{---} \end{array} \begin{array}{c} \text{---} \\ \text{---} \\ \text{---} \\ \text{---} \end{array}$$

- ▶ Hermitian Young operators

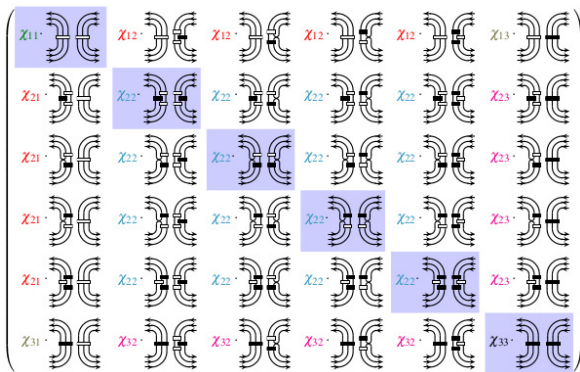

$$P_{\begin{array}{|c|c|} \hline 1 & 2 \\ \hline 3 & \\ \hline \end{array}} = \frac{4}{3} \begin{array}{c} \text{---} \\ \text{---} \\ \text{---} \\ \text{---} \end{array} \begin{array}{c} \text{---} \\ \text{---} \\ \text{---} \\ \text{---} \end{array}, \quad P_{\begin{array}{|c|c|} \hline 1 & 3 \\ \hline 2 & \\ \hline \end{array}} = \frac{4}{3} \begin{array}{c} \text{---} \\ \text{---} \\ \text{---} \\ \text{---} \end{array} \begin{array}{c} \text{---} \\ \text{---} \\ \text{---} \\ \text{---} \end{array}$$

SK & M. Sjödal, J. Math. Phys. **55** (2014) 021702, arXiv:1307.6147

J. Alcock-Zeilinger & H. Weigert, J. Math. Phys. **58** (2017) 051702, arXiv:1610.10088

J. Alcock-Zeilinger & H. Weigert, J. Math. Phys. **58** (2017) 051703, arXiv:1610.08802

quarks & anti-quarks, singlets only – bending lines

J. Alcock-Zeilinger & H. Weigert, arXiv:1812.11223

quarks & anti-quarks – non-singlets

- ▶ apply two Hermitian Young operators

- ▶ further decompose by subtracting contractions, e.g.

$$\begin{aligned}
 & \text{Diagram with 3 quark lines (top) and 3 anti-quark lines (bottom) entering from the left and exiting to the right, with a vertical bar connecting the top and bottom lines.} \\
 & = \frac{2}{N+1} \left(\text{Diagram with 3 quark lines (top) and 3 anti-quark lines (bottom) entering from the left and exiting to the right, with a vertical bar connecting the top and bottom lines, and a loop connecting the top and bottom lines.} \right) \\
 & + \left(\text{Diagram with 3 quark lines (top) and 3 anti-quark lines (bottom) entering from the left and exiting to the right, with a vertical bar connecting the top and bottom lines, and a loop connecting the top and bottom lines.} - \frac{2}{N+1} \text{Diagram with 3 quark lines (top) and 3 anti-quark lines (bottom) entering from the left and exiting to the right, with a vertical bar connecting the top and bottom lines, and a loop connecting the top and bottom lines.} \right)
 \end{aligned}$$

work in progress (with J. Alcock-Zeilinger)

expanding into multiplet bases – 3j & 6j coefficients

The diagram shows a hexagon with red edges on the left and right sides. This is equal to a sum over α of a coefficient d_α multiplied by a diagram of a circle with a horizontal line through it. This is further equal to a sum over α of a coefficient d_α multiplied by a diagram of a circle with a horizontal line through it, which is then multiplied by a diagram of a triangle with a horizontal line through it. Finally, this is equal to a sum over α of a coefficient d_α multiplied by a diagram of a pentagon with red edges on the left and right sides.

calculate 6j coefficients using multiplet bases

$\begin{array}{c} \triangle \\ 1 \\ \hline 1 \\ \hline \end{array} = \frac{1}{N^2-1}$	$\begin{array}{c} \triangle \\ 1 \\ \hline 27 \\ \hline \end{array} = \frac{1}{2(N^2-1)}$	$\begin{array}{c} \triangle \\ 10 \\ \hline 10 \\ \hline \end{array} = -\frac{1}{\sqrt{N^2-4}(N^2-1)}$
$\begin{array}{c} \triangle \\ 1 \\ \hline 27 \\ \hline \end{array} = \frac{1}{2(N^2-1)}$	$\begin{array}{c} \triangle \\ 27 \\ \hline 27 \\ \hline \end{array} = \frac{1}{N(N^2-1)}$	$\begin{array}{c} \triangle \\ 10 \\ \hline 10 \\ \hline \end{array} = \frac{\sqrt{2}}{\sqrt{N^2-4}(N^2-1)}$
