# How you might know us

Involved in DSpace (Richard as a committer) since 2004 (pre-CL). Cottage Labs have carried out a variety of projects including at University of Cambridge and University of Oslo, focusing heavily on multi-system integrations.

Involved in Samvera (formerly Hyrax, Anusha as significant contributor) since 2011 (pre-CL). Cottage Labs have carried out a variety of projects including an NGDR for National Institute of Materials Science, Japan and University of Hull for UK City of Culture

# How you might know us

Over the years we have done a large number of projects with Jisc, including the Jisc Publications Router and Jisc Monitor.

Since 2011 Richard has been technical lead for the SWORD protocol, and we are currently in the process of developing SWORDv3. It is likely that the SWORDv3 reference implementation will be done on Invenio3 in collaboration with CERN

# How you might know us

Cottage Labs has been the developer and web host for DOAJ since 2013. We work closely with the administrative and management teams to deliver the service.

DOAJ has a lot of similarities to Invenio: Python, Flask, Elasticsearch. Large scale data: 4.5m public records, ~8.5m records in total.

# Our work with Invenio

## We are new! Hello!

We **have** begun on our first project with Invenio, which involves integrating with the REST API to build a custom discovery interface. We can't tell you much more about it yet, but hopefully soon...

Maybe our second project could be with **YOU**?

# Thanks for listening
