team Delta
and team
Omega

same task

friendly
competition

OUR WORKPLACE

- ▶ design and optimize a C-lifting bracket
- ▶ using Ansys as CAD software and finite element analysis software to analyse design
- ▶ 3D print the final design of each group and test it
- ▶ aim: minimize stress AND volume ($105 \text{ cm}^3 \rightarrow 42 \text{ cm}^3$)

THE TASK

Overall Dimensions:
100mm x 120mm x 10mm

- red: not allowed to change
- green: allowed to change
- material can't be added around the green area
- the force is applied to the holes in the bracket and pulls them away from each other
- material: *Visijet M2R-WT*

ABOUT THE BRACKET

Mesh $1,5e-3m$

100N

material: structural steel

COMPARISON OF
THE MODELS

MAX. DEFORMATION:
 $4,17e-6$ m

MAX. STRESS:
4,97e6 Pa

FIRST IDEAS TEAM DELTA

Volume: 56,5 cm³

Max. Stress: 1,34 e7 Pa

Max. Deformation: 1,55 e-5 m

FIRST IDEAS TEAM DELTA

Volume: 75,07 cm³

Max. Stress: 7,04 e6 Pa

Max. Deformation: 6,45 e-6 m

FIRST IDEAS TEAM OMEGA

Volume: 67,71 cm³

Max. Stress: 4,84 e6 Pa

Max. Deformation: 8,4 e-6 m

FIRST IDEAS TEAM OMEGA

Volume: 41,92 cm³

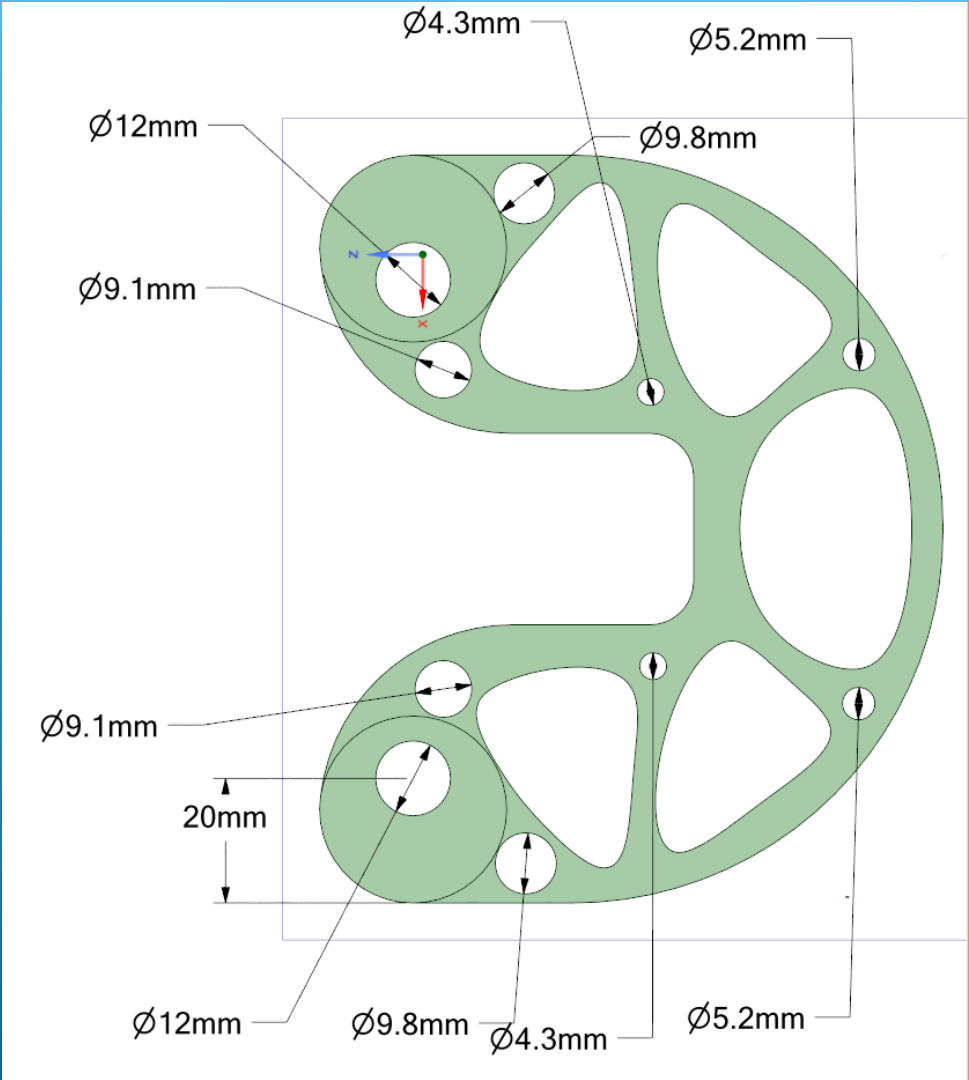

Max. Stress: 2,18 e7 Pa

Max. Deformation: 3,04 e-5 m

FINAL DESIGNS

The image features a solid blue gradient background. In the bottom right corner, there are several thin, parallel diagonal lines in a lighter shade of blue, extending from the bottom edge towards the top right.

STRESS

COMPARISON TO
TOPOLOGICALLY
OPTIMIZED MODEL

B: Static Structural

Equivalent Stress
Type: Equivalent (von-Mises) Stress
Unit: Pa
Time: 1
21/11/2019 12:06

delta

Max.: 1,11e7 Pa

omega

Max.: 1,09 e7 Pa

Max. Stress: 0,832e6 Pa

B: Static Structural

Total Deformation
Type: Total Deformation
Unit: m
Time: 1
21/11/2019 12:06

delta

Max.: 2,03e-5m

omega

Max.: 3,46e-5m

Max Deformation: 8,3e-6 m

ANALYSIS

- ▶ arches bend easier than straight lines → buckling → less stiffness
- ▶ most material at the stress center
- ▶ direct connection from holes to most stressed area
- ▶ supports (connections) between most stressed area and outer ring
- ▶ round corners → stress distribution/no stress centers
