

# Milestones:

Arising from RRB and RSG report:

- Storage availability and use;
- Installed capacities at Tier 2s;
- These have been promised for a long time, now we must deliver!
  - Should set aggressive milestones so that we have something to show at end of summer.

Also requested: Information on “hot” data sets on disk

- E.g. What fraction of disk-resident data is active
- This will be experiment specific
