

My name is Anna, I am from Russia. I am 1st year Master student in Moskow Institute of Physics and Technology. I study Particle Physics. At CERN I am working in EP-CMG Department on ggH rejection for double Higgs search. After CERN I am planning to publish article based on my Master Thesis, obtain MSc degree and find PhD position. I really like my project, it allows me to try new tools on the real task. Also I liked opportunity to attend very interesting lectures and workshops.
