

CERN Short Intro

Daniel Prelipcean

August 2019

Greetings fellow humans,

The name I have been blessed with by my parents is Daniel, and the country I was born and raised in is Romania. I chose Germany for my university education, and now I am doing my MSc at the Technical University of Munich.

Here, at the pinnacle of the research and collaboration, also known as CERN, I am part of the IT-CDA-DR group, working on ReAna (Reusable Analysis).

After CERN, I plan to dedicate myself even more to what science means on social perspective: collaboration across boundaries. In more practical terms, I actually intend to stay in close touch with CERN, via the other programmes they offer, e.g. the technical student one. Eventually, I will commit for a PhD.

The most enjoyable experience for me is the feeling of being part of something way greater than man-made social constructs that divide us, of pursuing fundamental research for the benefit of all mankind.
