

Name: Nada Alghamdi

Country: Saudi Arabia

I just finished my bachelor's degree in physics, and I am having a gap year in which I am travelling and doing internship. I intend to pursue a master and PhD in physics.

Here at CERN, I have been working with the tile calorimeter group on the tile crack scintillator upgrade project, in which we are assessing the quality of the new crack scintillators before they get installed into ATLAS detector.

It is my first time in Europe, and I like it very much. I also love the multicultural environment that exist at CERN.
