

Dear all,

My name is Andrea Kozlowski and I grow up mainly in Germany. Being a student at the FH – Aachen: University of Applied Sciences, but my department is located in a small city called Jülich which might be known for its Research Centre (FZJ). This university offers an incredible unique master degree: ‘European Master of Nuclear Applications’ (M. Sc.).

My position at CERN is being a summer student in HSE-RP. What I work on you will see in my presentation.

After CERN, I will move back to Germany, entering directly the finishing straight of studying, by doing the master thesis. Planning to stay in touch with CERN, by trying my luck in applying for a PhD position. If not everything works out as planned, I will anyway start my PhD somewhere.

The advantages of being a summer student cannot be summed up in one thing. It is the whole thing which is amazing (Work, People, Aura, etc..) and everyone has a big part in its amazingness. This experience will probably influence all of us in future in a way we do not expect now. Thank you all!
