

Hey people,

I am ChinZhe Tee, from Malaysia. You can spot it easily from the map near the South-East Asia region, as it looks like a sweet potato and pregnant seahorse. I am currently doing BSc. in Physics in University of Malaya, located in Kuala Lumpur, if you ever heard of this place. Have a look of the beautiful campus ;)

I am supervised by Jeremy Andrea, Marco Musich, Tatjana Susa and Stefano Mersi from CMS Tracker Detector Performance group, but I only seen one of the so far :( I am working on a project which has a long and fancy name: "Automatic measurement of track reconstruction efficiency for data quality monitoring in the CMS experiment", the keyword of this project is **track reconstruction efficiency**. The only C++ programming that I ever wrote before I reach here is the good-old "Hello World", and I am glad that I learnt some C++ and ROOT here, although ROOT is quite an annoying application to be used .-.

I hope to continue my MSc. And PhD in Particle Physics, and, of course, work in CERN again!! If possible, I am hoping to visit all the "big-five" of the Particle Physics : FERMILAB, DESY, KEK, CERN and TRIUMF. After coming to CERN, I realized that I was not well equipped with essential knowledge and skills to further study in the field of Particle Physics immediately. :( But I am ready to take the challenge and study really hard for my 4<sup>th</sup> years and armed myself with the necessary stuff!

I LOVE everything in CERN! From lectures, the people I met here, till the bathroom etc. Everything is new and different here! I am certain that I will return to CERN and work here one day!
