

## About Me

Julia Book

University of Chicago, Chicago, IL, USA

Bachelors in Physics, minor in Medieval Studies, anticipated 2020

At CERN, I've been working in the ALICE HMPID group, working on anti-deuteron identification under the supervision of Alberto Caliva (GSI Helmholtz Centre for Heavy Ion Research). I hope to continue in physics after coming back from CERN. In particular, I hope to earn a PhD in particle physics, ideally working on a neutrino experiment. My favorite experience being at CERN this summer has been in getting to experience what it's like to achieve my childhood dream, and to meet such interesting people from all over the world.
