N&E Examples WG

- Adding A New Example

- Macros and Tests Review

- Obsolete Features

- Applying Coding Guidelines

- Examples Doxygen Documentation

- Status of Examples MT Migration

- List of Extended Examples

- The link to Wiki pages is available from the WG Web page
- Access is restricted to Geant4 developers

Examples Review
Obsolete Features

- Closed items in 2018:
  - A list of examples with explicitly defined physics lists and builders reported to PL WG

  - Improve main() and remove G4VIS_USE and G4UI_USE macros to make the function main() easier to understand to users in all extended examples:
    – thanks a lot to John Allison

- No new items since the last year
- Remaining items
  - Explicit use of **std:cout, std::cerr, exit()**
  - The list of examples with the presence of these was updated for geant4-10-05-ref-08

Macros Review

- The list of items to be reviewed is available on the wiki page together with the lists of unused commands, generated in a semi-automatic way two years ago
- A table for monitoring the progress was added to the page
  - ~ 23 % of all extended examples were reviewed in 2018
  - No updates in 2019
- A mail about this review will be sent to the developers of remaining examples after the CM

Coding Guidelines

- Following the coding guidelines is requested when adding a new example
  - Most of the guidelines are checked semi-automatically
  - With moving to gitlab some of checks via svn hooks were lost (e.g. chaks for tabulations)
- The number of violations was reduced significantly in the past years
- The list of violators (examples files) is available on the wiki page
  - Updated once per year
  - Last update for geant4-10-05-ref-08:
  - 8 violations in member functions names, ~40 data member names, 46 missing separators, 1 long line
- The developers of the examples with guidelines violations were contacted by mail

Build Options in DICOM example

- Discussed already last year but no solution was found
- 3 options
  - "old", DICOM_USE_DCMTK, DICOM_USE_HEAD
- The optional build is not supported in Geant4 tests
  - A test (reading a reduced file) was prepared by Susanna for the new DICOM_USE_HEAD option for 10.4
  - But we failed to add the test in Geant4 cdash tasts due to optional build
- Only the "old" option in Geant4 tests
