

Documentation Working Session

- 1) Discussion – following from the plenary
- 2) Physics lists
- 3) Videos

Alex Howard, Imperial College

Points to Discuss

- Alternative formats (i.e. not just pdf and html - Anna has implemented epub and mobi)
- Alternative languages (I had a request for Ukrainian - but self-maintained)
- Release schedule - should we have dev versions?
- Division between the guides - some guides seem unnecessary (e.g. introduction, FAQ) and some topics fall between the gaps - e.g. low level hadronic model manipulation
- Physics lists (again)

Any other points?

- Is sphinx the best solution?
- Should we also have static pages (hugo?)
- The guides are quite distinct entities – should search be allowed across guides?

Videos

- Where are we?
- Who should be responsible?
- Central repository?
- Keeping them up to date?
