

# Workshop and our Paper

## Status and Plans

Max Klein

Meeting of LHeC/FCCeh Coordinators, June 5, 2019

# Workshop

Goal: deliver, discuss, release the CDR Update

Time 24+25.10. at Chavannes [fixed]

Help from Elodie Kurzen (CERN)

Sponsors: FCC, ARIES, LAL (tbc), CI (tbc)

Total cost: 11k SF, dinner not included

We think of 50 SF fee (with dinner included)

Announcement to come in June

Poster: via CERN, tbc

IAC: to be invited to meet on Friday, Herwig ok  
Freddy d'accord to come.

Program:

To be drafted, and speakers invited

LHeC, FCCeh, PERLE.

Physics and Detector and Accelerator

All plenary, that is full time available

An opening: Quarks 1969 Breidenbach???

Opening: Overview on the New Paper

Opening: hh Colliders: HL-IHC. FCChh

Talks: shall follow the paper.

Bits of time for new developments ...

Depending on programme we shall form  
An organising group

## A Higgs Facility Resolving the Substructure of Matter

Update on the 2012 LHeC Report  
on the Physics and Design Concepts for Machine and Detector

LHeC Collaboration

Submitted to J.Phys. G

This needs revision and much work now.

← Status from Orsay (next pages)

Sincere discussion now for revision.

We shall form a team of editors

Daniel Britzger (tbc)

MK, Oliver B

Suggest we

- i) Agree on structure
- ii) find responsables for

Each topic (normally the convenors  
and members of the coordination group)

Regular meeting until October (and beyond)

<b>1</b>	<b>Modern Particle Physics and the Large Hadron Collider</b>	<b>4</b>
<b>2</b>	<b>Higgs, Discovery and Precision Physics</b>	<b>5</b>
2.1	Electron-Hadron Scattering at the HL and HE LHC . . . . .	6
2.1.1	Kinematics and Reconstruction of Final States . . . . .	6
2.1.2	Opportunities through Energy Frontier ep and eA Interactions . . . . .	6
2.1.3	Luminosity and Operation of an eh Collider at the LHC . . . . .	6
2.2	Higgs Physics . . . . .	6
2.2.1	High Precision Higgs Coupling Measurements . . . . .	6
2.2.2	Htt Coupling Measurement . . . . .	6
2.2.3	Combined ep and pp Analysis - the Potential for Precision Higgs Physics at the LHC	6
2.2.4	Discovery of the H-HH Selfcoupling . . . . .	6
2.2.5	Exotic Higgs Decays and Dark Matter . . . . .	6
2.2.6	Extension of the SM Higgs Sector . . . . .	6
2.3	Challenging the Standard Model through High Precision and Energy . . . . .	6
2.3.1	Resolving the Parton Substructure of the Proton . . . . .	6
2.3.2	Electroweak, W Boson and Top Quark Physics . . . . .	6
2.3.3	Non-Conventional Proton Structure Resolution . . . . .	6
2.4	Searches for Physics Beyond the Standard Model . . . . .	6
2.4.1	Heavy Neutrinos . . . . .	6
2.4.2	Flavour Changing Neutral Currents . . . . .	6
2.4.3	Substructure . . . . .	6
2.4.4	Leptoquarks . . . . .	6
2.5	Discovery through Precision QCD . . . . .	6
2.5.1	High Mass and Bjorken x Searches at the LHC . . . . .	6
2.5.2	Strong Coupling and Grand Unification . . . . .	6
2.5.3	New QCD Dynamics at small x . . . . .	6
2.5.4	A New Era of Nuclear Particle Physics with eA . . . . .	6
<b>3</b>	<b>Experimentation at the LHeC</b>	<b>7</b>
3.1	Detector Design Considerations for HL and HE LHC . . . . .	7
3.2	Detector Overview . . . . .	7
3.2.1	Magnets . . . . .	7
3.2.2	Interaction Region, Beam Pipe and Radiation . . . . .	7
3.2.3	Inner Tracking . . . . .	7
3.2.4	Calorimetry . . . . .	7
3.2.5	Muon Detector . . . . .	7
3.2.6	Central Detector Performance . . . . .	7
3.3	Forward and Backward Detectors . . . . .	7
3.3.1	Proton and Neutron Forward Taggers . . . . .	7
3.3.2	Electron and Photon Backward Detectors . . . . .	7
3.4	Detector Installation and Infrastructure . . . . .	7

<b>4</b>	<b>An Electron Energy Recovery Linac at CERN</b>	<b>8</b>
4.1	The ERL Configuration of the LHeC . . . . .	9
4.1.1	Basic Structure and Design Choices . . . . .	9
4.1.2	Component Summary . . . . .	9
4.1.3	Performance Estimates and Operation Scenarios . . . . .	9
4.1.4	Electron-Ion Scattering . . . . .	9
4.2	ERL Beam Dynamics and Performance Limitations . . . . .	9
4.2.1	Front-end Simulation . . . . .	9
4.2.2	BBI, Filling Patterns and Bunch Structure . . . . .	9
4.3	LINAC and SRF . . . . .	9
4.3.1	Choice of Frequency and Cavity Prototype . . . . .	9
4.3.2	Sources . . . . .	9
4.3.3	Injector . . . . .	9
4.3.4	LINAC and Cavity-CryoModule . . . . .	9
4.3.5	Infrastructure: Power and Cryogenics . . . . .	9
4.4	Magnets and Dumps . . . . .	9
4.4.1	Arc Magnets . . . . .	9
4.4.2	Dumps . . . . .	9
4.5	Interaction Region . . . . .	9
4.5.1	Layout . . . . .	9
4.5.2	Triplet Magnet Design . . . . .	9
4.5.3	Optics . . . . .	9
4.5.4	IR and L* Optimisation . . . . .	9
4.6	Civil Engineering . . . . .	9
4.7	Stand-Alone Operation and Physics with the ERL, post HL LHC . . . . .	9
4.7.1	Photo-Nuclear Physics with the ERL . . . . .	9
4.7.2	A High Energy and Intensity Laser Facility . . . . .	9
4.7.3	A Photon-Photon Higgs Collider at CERN . . . . .	9
<b>5</b>	<b>Executive Summary and Further Project Development</b>	<b>10</b>
<b>6</b>	<b>Appendix</b>	<b>11</b>
6.1	The Technology Development Facility PERLE . . . . .	11
6.2	Cost-Energy-Physics Optimisation of the LHeC . . . . .	11
