

Status and Storage Resources for 2010-2011

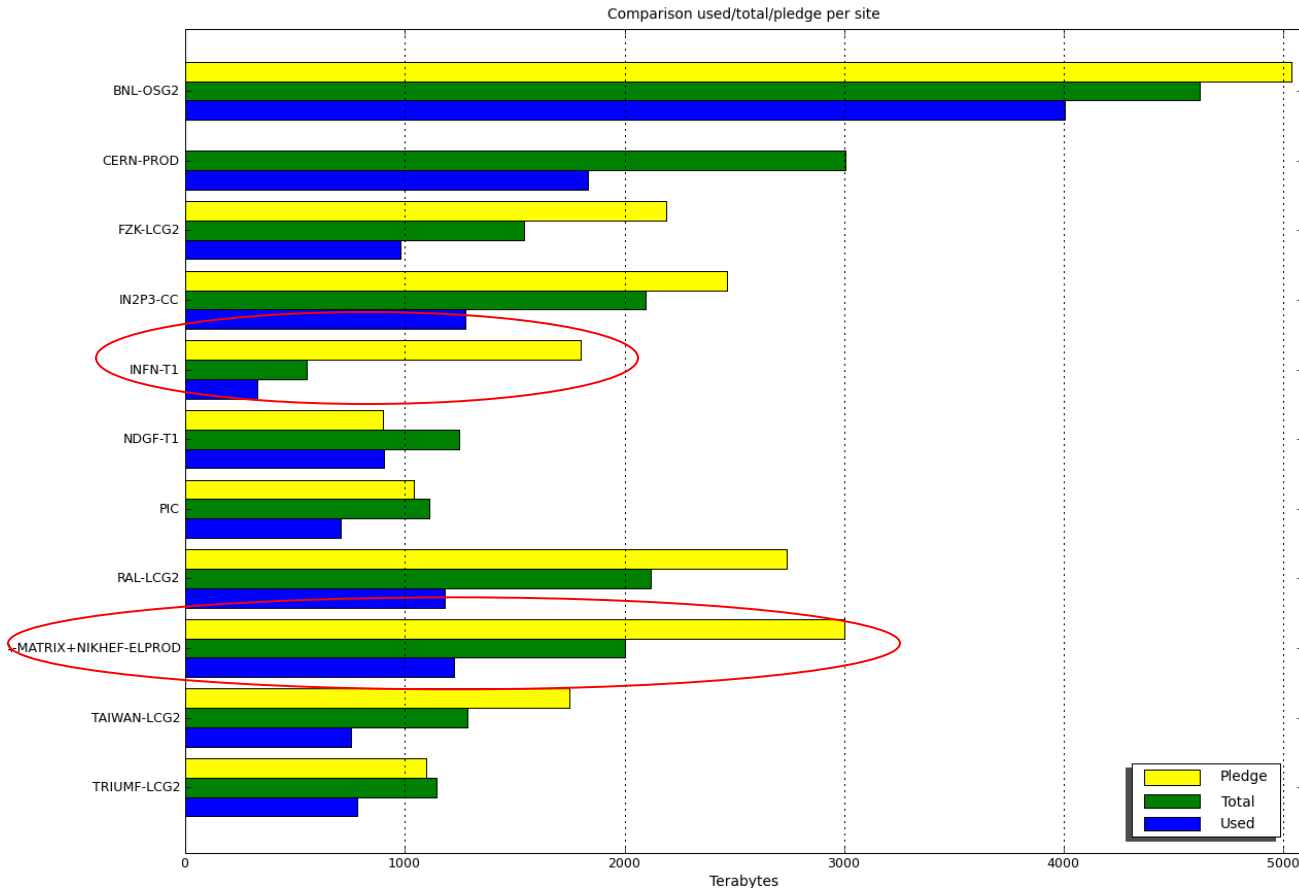

S. Jézéquel (LAPP)

2010-2011 resources

- 1 June 2010: 2010 pledge resources to be deployed
 - No more until 1 April 2011
- Few T1 and T2 sites did not deploy the space. Why ?
 - Disk or infrastructure not available
 - Missing information from ATLAS
 - Deploy only when disks are used
- Who is supposed to review the sites ?

T1 situation

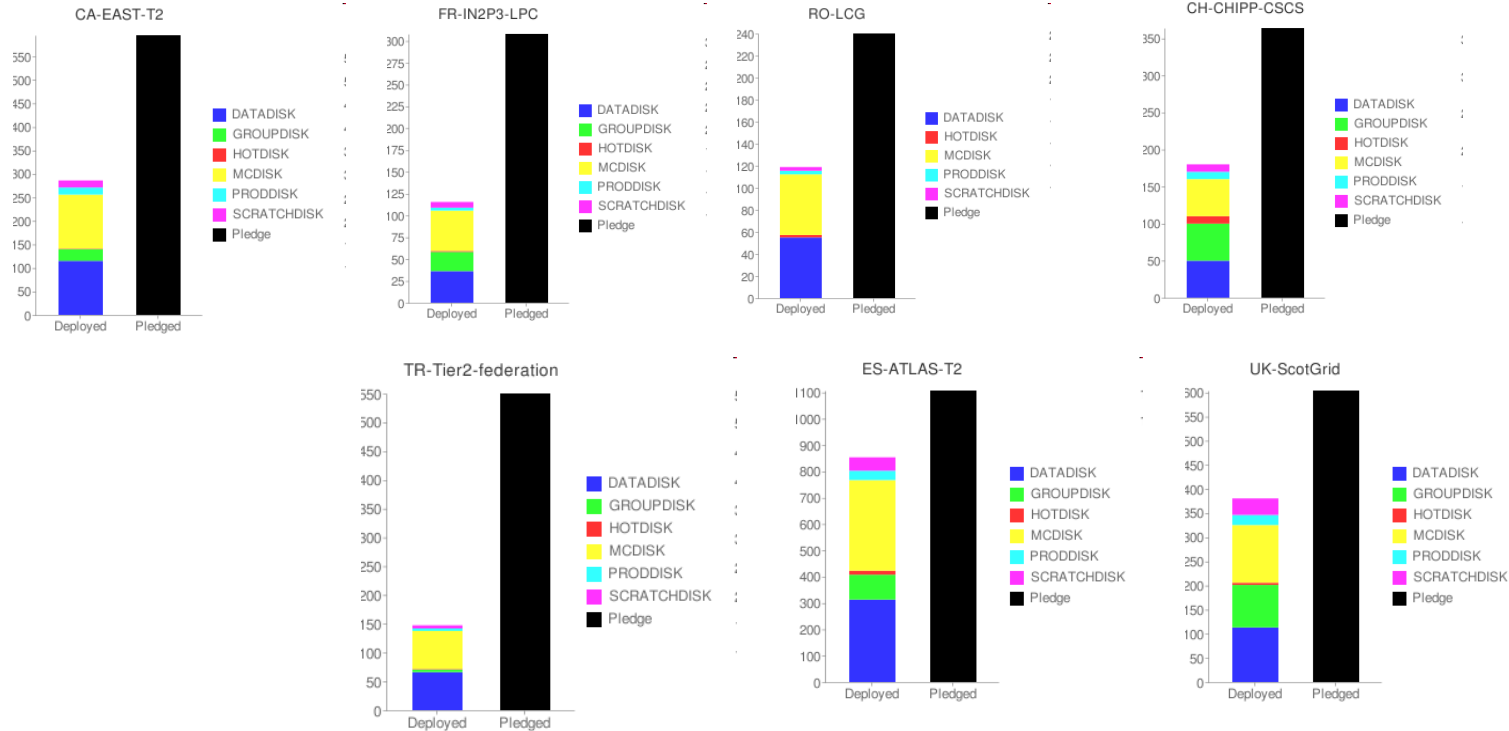

Approximation: Buffer for tape reading not include (O(100) TB per site)

Total pledge : 22 PB – Deployed : 17 PB (space token) + 1-2 PB : (tape buffer)
15 % of pledge resources missing !!!

T2 pledge resources

Most striking examples of federations failing to provide pledges

Last week, for operational reasons, it was proposed to blacklist sites with less than 50 TB for DATADISK or MCDISK

-> Many sites deployed the space to reach the threshold !!!

Deployed : 16 TB ; pledge 21 TB
Missing : 24 %
