Scaling-out CERN's IDS System with Network Automation

Tuesday, 13 August 2019 14:31 (7 minutes)

CERN is one of the most heterogeneous network in the world and in order to keep its traffic safe we've to inspect it in real time.

We have already an Intrusion Detection System that inspect CERN traffic firewall, but we're looking to make it more powerfull and more reliable.

In my work I've focused on IDS upgrade in order to support multiple hardware vendors to improve its scalability and availability.
