EOS Integration into OpenStack Manila

Tuesday, 13 August 2019 14:45 (7 minutes)

OpenStack is a popular open source cloud-computing software platform used widely at CERN. EOS is a disk-based, low-latency storage service powering user, project, and experiment data on services such as CERNBox.

This project strives to improve user experience by integrating EOS into OpenStack Manila, a shared storage system. This way, users are able to request and access project space via a single interface.

Presenter: Ms PETIT-BOIS, Elisabeth Ann (Kennesaw State University)
