## Measurements at the 175 MeV neutron beam at TSL

*Wednesday, 1 September 2010 15:30 (25 minutes)*

During the past few years, an experimental programme has been run at the 175 MeV neutron beam of The Svedberg Laboratory, Uppsala, Sweden. Elastic scattering and light-ion production have been studied for a number of different target nuclei. We will present the neutron beam facility, the experimental methods and some preliminary results.

**Author:** Dr POMP, Stephan

**Co-authors:** PROKOFIEV, Alexander (Uppsala University, Sweden); HJALMARSSON, Anders (Uppsala University, Sweden); TENGBORN, Elisabeth (Uppsala University, Sweden); LECOLLEY, Francois-René (LPC, Caen, France); LANTZ, Mattias (Uppsala University, Sweden); ÖSTERLUND, Michael (Uppsala University, Sweden); TESINSKY, Milan (Royal Institute of Technology, Stockholm, Sweden); ANDERSSON, Pernilla (Uppsala University, Sweden); BEVILACQUA, Riccardo (Uppsala University, Sweden); TIPPAWAN, Udomrat (Chiang Mai University, Thailand); SIMUTKIN, Vasily (Uppsala University, Sweden); WATANABE, Yukinobu (Kyushu University, Japan)

**Presenter:** Dr POMP, Stephan

**Session Classification:** Session 5: Current and Future Facilities
