Integrating SWAN and Rucio

Friday, 11 October 2019 09:45 (20 minutes)

We propose to integrate the Rucio data management system with SWAN. This will allow users, such as ATLAS and CMS scientists, to interact with experiment data without having to resort to manual operations for searching and downloading files. We will present several user workflow scenarios, the boundaries of the experiment infrastructure, and propose potential architectures to support this development.
