

## SWAN Users' Workshop

Contribution ID: 36

Type: **not specified**

# AARNet's CloudStor SWAN deployment facilitated by CERN's ScienceBox

*Friday 11 October 2019 10:40 (15 minutes)*

CloudStor SWAN (Service for Web based ANalysis) is AARNet's first attempt at providing data processing and analysis in the cloud to the research community in Australia. CloudStor has many similarities to CERNBox in that they are both based on ownCloud and use EOS for its underlying storage. In this talk I will discuss our SWAN deployment, the users who use it, training we provide and general feedback we have received from our users.

**Presenter:** D'SILVA, Michael (AARNet)

**Session Classification:** External deployments
