> **MAJA**: MAke Jets Again (new working title)

> Reminder: idea is to improve jet energy resolution using machine learning on PFCandidates

> Original plans jeopardised by J. Kieseler: cannot run external FastJet in Tensorflow, since we'd not have the required gradient
➜ leave FJ implementation in TF to future hackathon

> New plan (ongoing): use jet constituents for training

- implement PFCandidate-Jet linking feature in NanoAOD (CMSSW)
