Issues from last time:

1) Gamma flux shape difference
Surrounding Water:

Improves the gamma flux shape
But also dramatically increases the thermal neutron flux (fast unaffected)
Ran a trial generating only neutrons in the energy range 0.01MeV to 20MeV
Ran a trial generating neutrons (0.01MeV to 20MeV) and all photons

The input photon spectrum is necessary
Comparing MCNP Results With/Without Sab
Difference mainly seems to be scaling factor
Comparing MCNP Results With/Without Sab
Difference mainly seems to be scaling factor
