

PHAROS Conference 2020: The multi-messenger physics and astrophysics of neutron stars

Contribution ID: 83

Type: **Oral Presentation**

The observed evolution of pulsar rotation on human timescales

Thursday, 2 April 2020 11:30 (15 minutes)

I will present a summary of interesting phenomena related to the observed spin-down history of pulsars, with emphasis on those that depart from the canonical behaviour. In doing so, I will pose questions regarding how well we are estimating ages and magnetic fields, and point to observations and simulations that provide answers.
