

# System performance paper

P. Franchini

**MICE VC #212**  
**August, 8 2019**

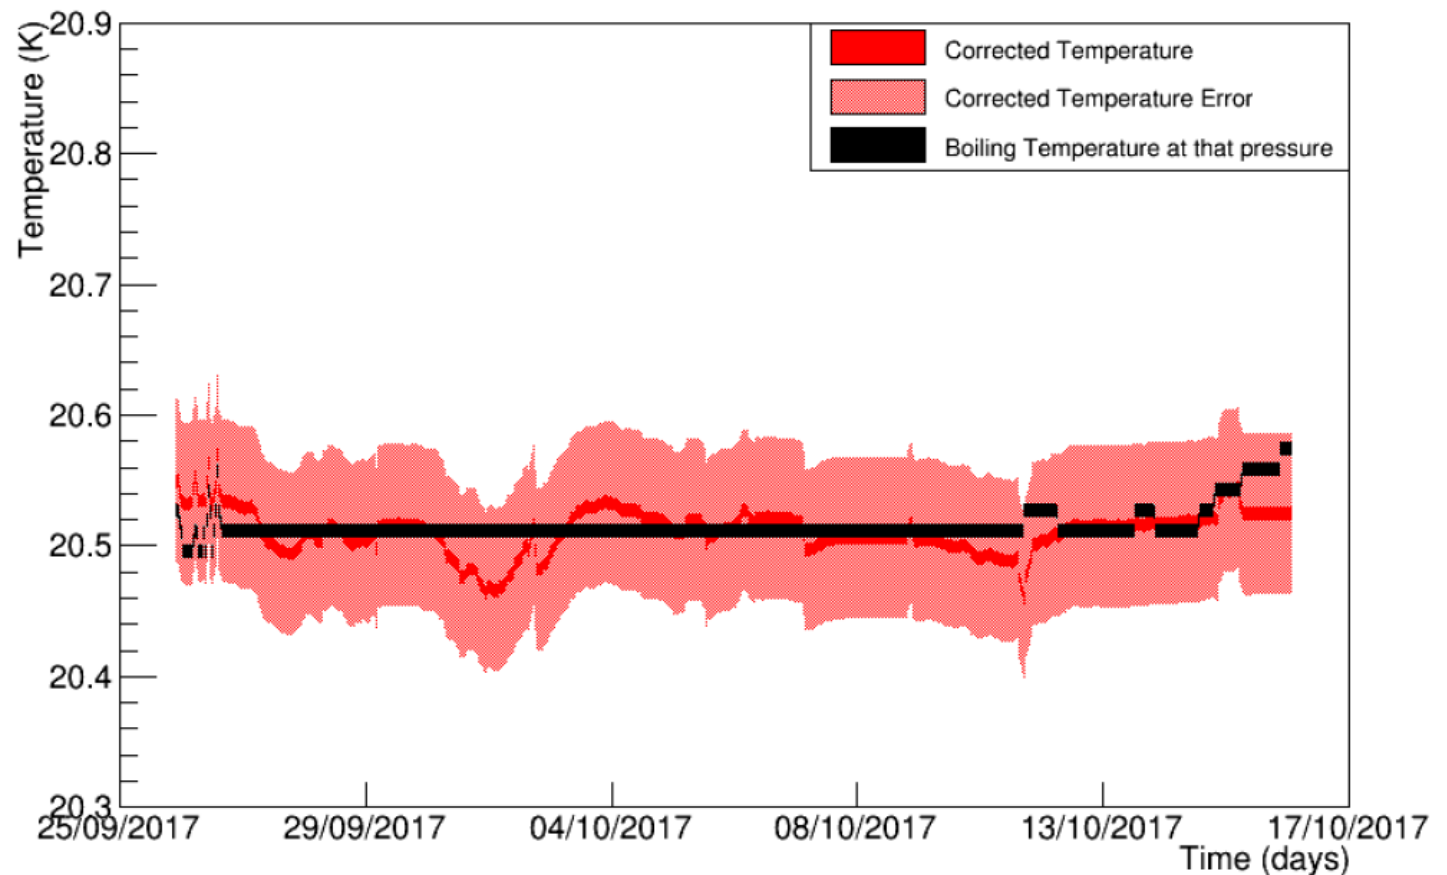

# Current status

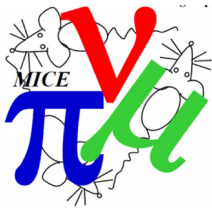

- Text down to ~27 pages
- Focusing on plots that require major work:
  - **TOF**: stability plot (time resolution vs runs)
  - **Ckov**: activation curves
  - **Tracker**: reconstruction bias/resolution and time evolution of the track finding efficiency

# LH2 absorber

- Craig: corrected the plot considering the non-linearity of the sensors

Liquid Hydrogen Temperature during steady-state

- 
- Received scripts/macros from Viktor
  - Mariyan will update his KL plots
  - Will try to produce/collect new plots before the next workshop
