

MEASUREMENT OF THE NEUTRON TIMELIKE ELECTROMAGNETIC FORM FACTOR AT THE VEPP-2000 e^+e^- COLLIDER WITH THE SND DETECTOR

Friday 16 October 2020 17:10 (20 minutes)

The $e^+e^- \rightarrow n+\bar{n}$ cross section has been measured in the experiment at the VEPP-2000 e^+e^- collider with the SND detector. The technique of the time measurements in the multichannel NaI(Tl) electromagnetic calorimeter is used to select $n+\bar{n}$ events. The measured value of the cross section in the energy range from the threshold up to 2 GeV is of order of 0.5 nanobarn, what corresponds to the neutron timelike form-factor ~ 0.3 . The presented work is supported by the RFBR grant No. 18-02-00147a.
