

DEEP SUBTHRESHOLD PRODUCTION PROCESSES OF J/PSI AND MUON PAIRS AND COLD DENSE BARYONIC MATTER

Friday, October 16, 2020 3:40 PM (25 minutes)

Deep subthreshold production processes of J/Psi and muon pairs and cold dense baryonic matter are proposed to study at a NICA fixed target experiment FITNEX. Such studies should be very sensitive to cold dense baryonic matter and can be complimentary to upcoming MPD, SPB and BM@N experiments at NICA.
