LXX International conference "NUCLEUS –2020. Nuclear physics and elementary particle physics. Nuclear physics technologies"

Contribution ID: 176

Type: Oral report

## **Nuclear shells reflection in nuclear masses**

This is a 25 year universary for the simple multiparameter mass formula of CHIPS. The declared mean shell factors withstand for more than 25 years, whilst the number of the measured or estimated mass values is almost doubled. This formula still can be used as a prediction for the short-lived nuclei, which are produced in the high energy nuclear collisions.
