

Spectroscopic study of decay properties of transfermium isotopes in Dubna

Thursday, October 15, 2020 4:25 PM (25 minutes)

Important information on the structure of Super Heavy Elements (SHE) can come from the study of lighter deformed transfermium ($Z \sim 100-106$) elements. The cross-section for the formation of these nuclei is many orders of magnitude higher than for $Z \geq 110$ so that detailed spectroscopy becomes possible.

The opportunity to have high intensity ($>1 \mu\text{A}$) accelerated beams with $A \leq 50$ together with the use of exotic targets provide the possibility to study many aspects of heavy ion induced reactions exploiting new generation of high efficiency, high resolution experimental setups.

In recent years α -, β - and γ - spectroscopy of heavy nuclei at the focal plane of recoil separators ("decay spectroscopy") has been very intensively developed. The mixing of α decay with γ and β decay spectroscopy allows to investigate single particle states behavior as well as the structure of little known elements in the $Z = 100-104$ and $N = 152-162$ region.

Using SHELS recoil separator and GABRIELA (Gamma Alpha Beta Recoil Investigations with the Electromagnetic Analyser) detector set-up the experiments aimed to the gamma and electron spectroscopy of the Fm–Db isotopes, formed at the complete fusion reactions with heavy ions ^{22}Ne , ^{48}Ca , ^{50}Ti and ^{54}Cr were performed at FLNR JINR.

At the years 2017–2019 we performed model experiments using method of high resolution alpha, EC and γ spectroscopy to study decay properties of $^{254,255,256,257}\text{Rf}$ in the reactions $^{50}\text{Ti} + ^{206,207,208}\text{Pb} \rightarrow ^{256,357,258}\text{Rf}$, $^{250,252,254}\text{No}$ in the reactions $^{48}\text{Ca} + ^{204,206,208}\text{Pb} \rightarrow ^{252,354,256}\text{No}$ and ^{256}No in the reaction $^{22}\text{Ne} + ^{238}\text{U} \rightarrow ^{260}\text{No}^*$.

Future developments and perspectives of experimental studies in spectroscopy of heavy and superheavy elements are discussed.
