## **CERN Tape Archive: production status and plans**

*Friday, 27 September 2019 09:00 (50 minutes)*

CTA is designed to replace CASTOR as the CERN Tape Archive solution, in order to face scalability and performance challenges arriving with LHC Run-3.

This presentation will focus on the current CTA deployment and will provide an up-to-date snapshot of CTA achievements: notably CTA participation to the recent ATLAS recall campaign of 2018 data (August 2019).

It will also cover the final Run3 CTA Service architecture and underlying hardware that will be deployed mid October 2019.

### **Summary**

**Presenter:** LEDUC, Julien (CERN)
