

Site-VO Trust

D. Petravick
GDB Meeting
June 6, 2007

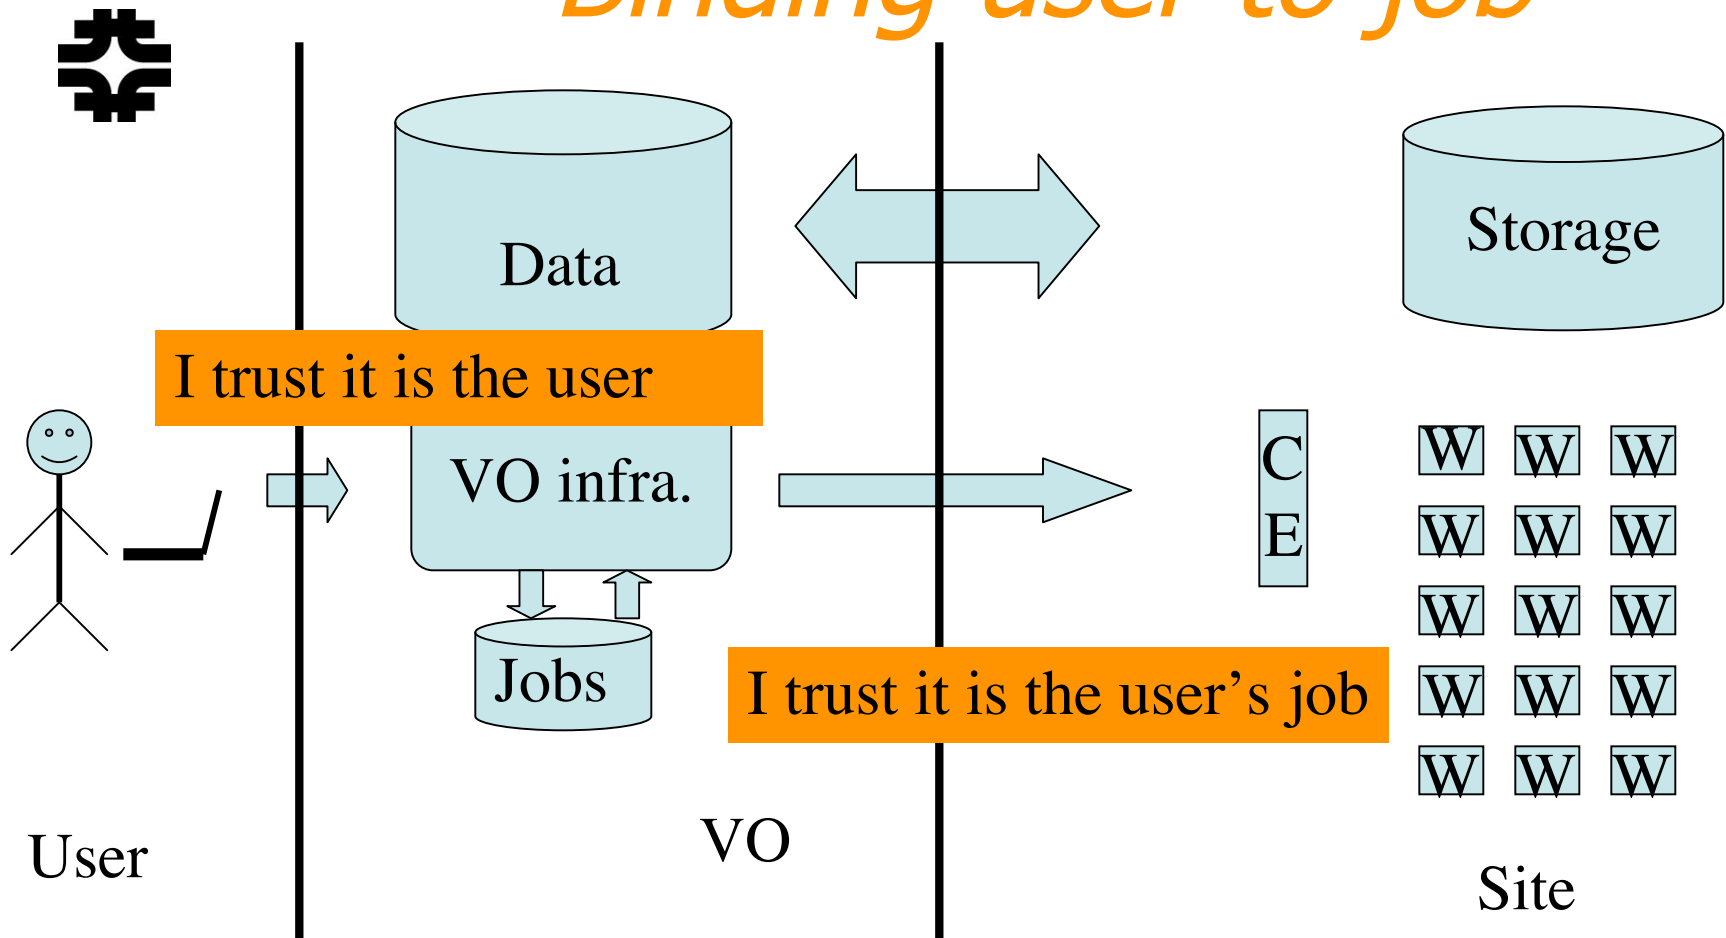

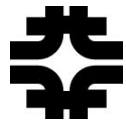

US LHC experiments in the OSG

Binding user to job

Thinking

- Main controls are not technical
 - the VO's stand behind the operation.
 - The VO's are trustworthy.
 - Site trade with VO's and not users.
- Glxec on worker nodes does not provide any of this trust.
 - Glxec provides site services to pilots.

Summary

- Thinking about pilots and security naturally generalizes into thinking about the essential trust between sites and VO's.
- The trust is extensive, and subsumes the issue of trusting a pilot.
