## Chemical Evolution of Galaxies and JWST Surprises

*Tuesday 29 August 2023 11:10 (30 minutes)*

I will discuss the chemical evolution of galaxies, with particular attention to the Milky Way for which we have the majority of chemical abundance data . I will describe what is galactic archaeology, namely how to reconstruct the history of star formation of a galaxy starting from the abundances measured now in stars and gas. The cosmic evolution of metallicity with redshift will be discussed in the light of the new data from JWST.
