Microsoft Licensing Status

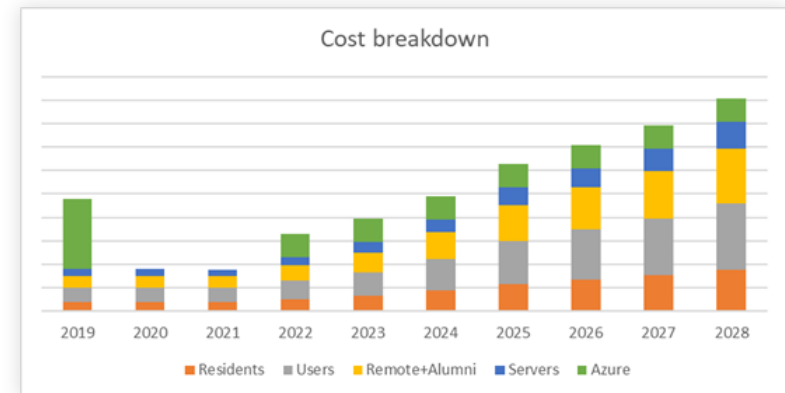

The Problem

- Microsoft revoked CERN academic/education status in 2017
 - We do not fit in any of the special categories: Government, Education, Health, Non-profit
- Consequence: potentially a 10 fold increase in price
- The new licensing is based on # users
 - CERN publishes its personnel statistics
 - A user == an email address
 - Leads to ~40000 accounts & mailboxes
- The current offering is based on a bundle
 - Exiting this bundle likely to double the prices
- The previous contract terminated on 28.2.2019

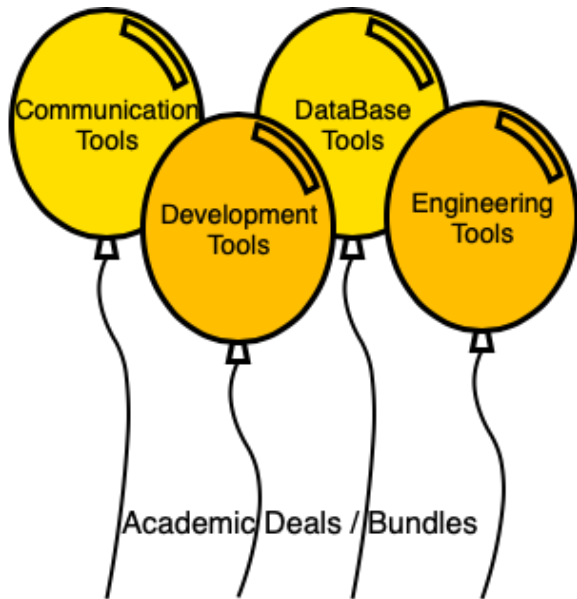

The Problem (cont.)

- Other similar organisations have faced similar problems
 - Although not (yet) for everybody and some benefit from the special categories
- The big financial impact is due to the server side technologies currently used (e.g. Mail, Authentication, etc...)
- Over years, we have granted access to all Microsoft products, regardless of the needs
 - E.g. 500 Visual Studio installations, 1500 Visio or Project...

Context and Strategy

Opportunities / Risks

- "academic deal forever"
- "for CERN *our service is free*"

Opportunities / Risks

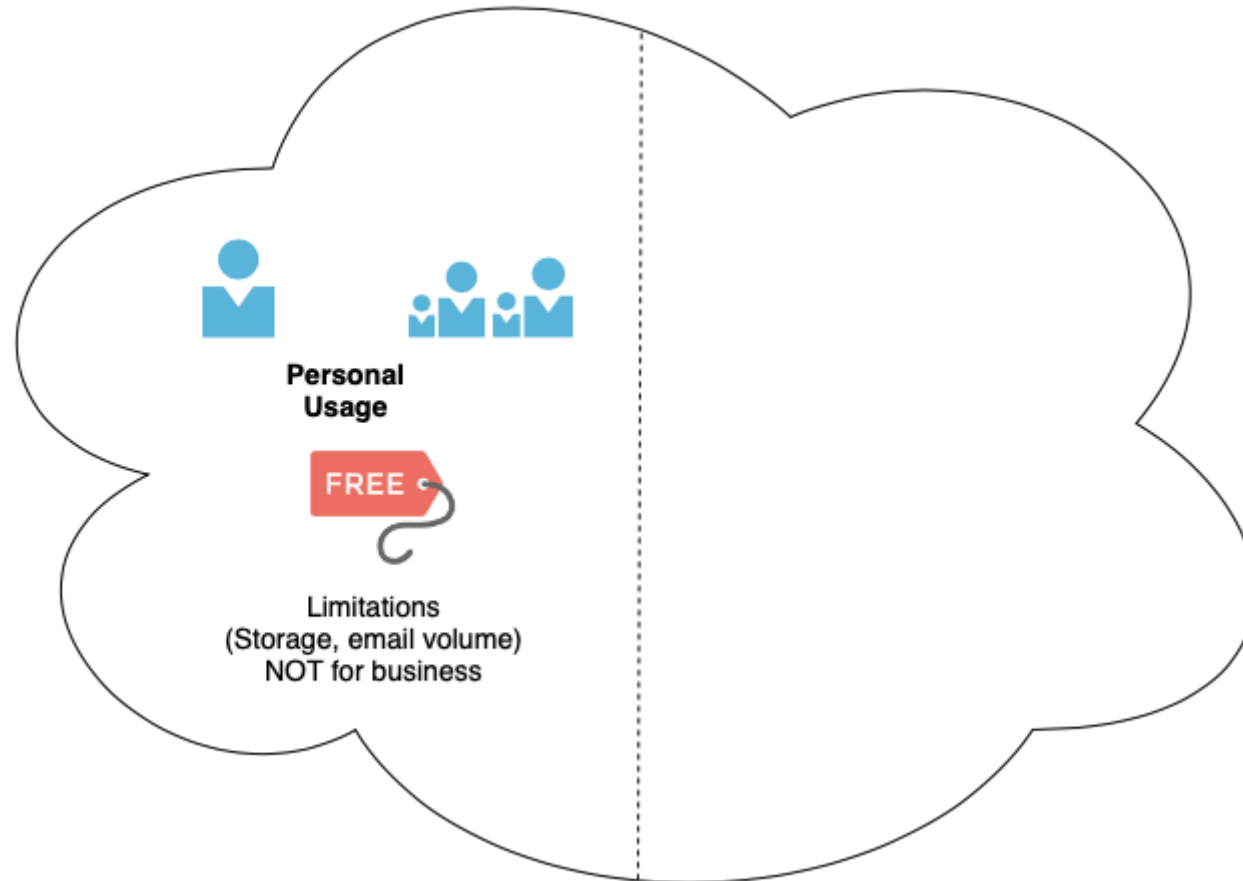

- "academic deal forever"

Supressed

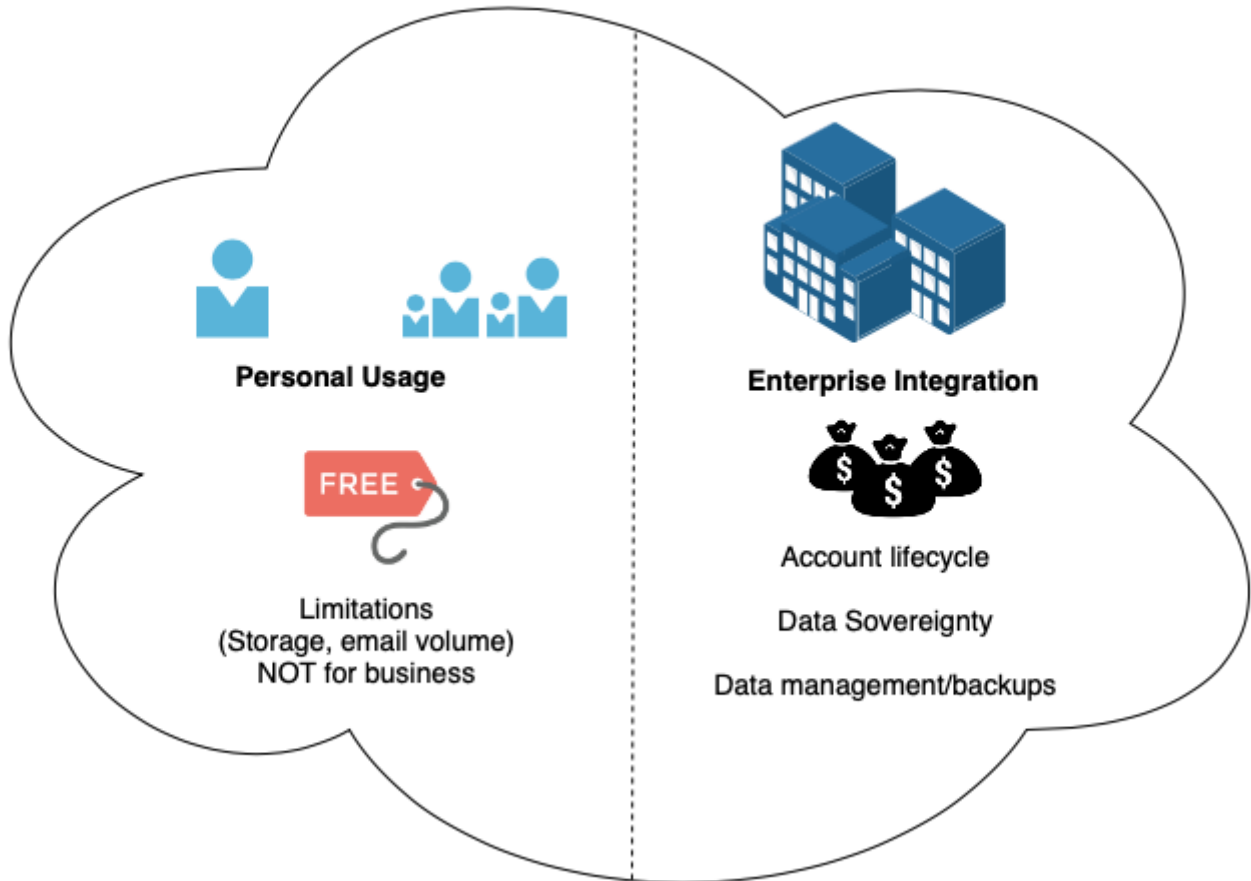

- "for CERN *our service is free*"

Free(mium)

Free(mium)

Peers

Everyone is in the same boat

- Confronted by the same change of licence conditions
 - Research Labs Universities
 - NGOs Hospitals
 - ...
- MALT article
 - Contacted by 100s of institutes / companies
 - DE: MPI, Parliament, Federal Ministries, Fraunhofer, ...
 - FR: CNRS, SNCF, ...
 - CH: SWITCH, ETHZ, UNIL, ...
 - EC, UNESCO, ICRC...
 - ...

MALT Strategy

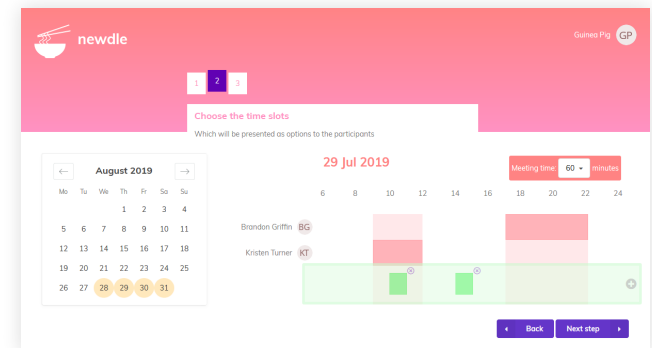

Disentangle services; reduce dependencies and risk

Onsite:

- Open Source
- Architecture: Microservices
 - Coupled, replaceable
 - Agility, lifecycles
- Reimplement, reconceive
 - Not 1-for-1: by use cases
 - Reduce to necessary
 - Not eliminate
 - Example: SharePoint

Clouds:

- Affordable
- Data control and exit clauses
- Cloud Office, Cloud Policy
 - datatransferproject.dev
 - confidentialcomputing.io

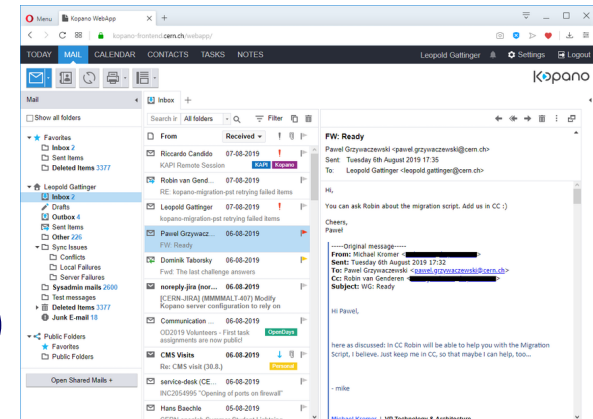

The Projects

Mail

From *Exchange* to *Kopano*

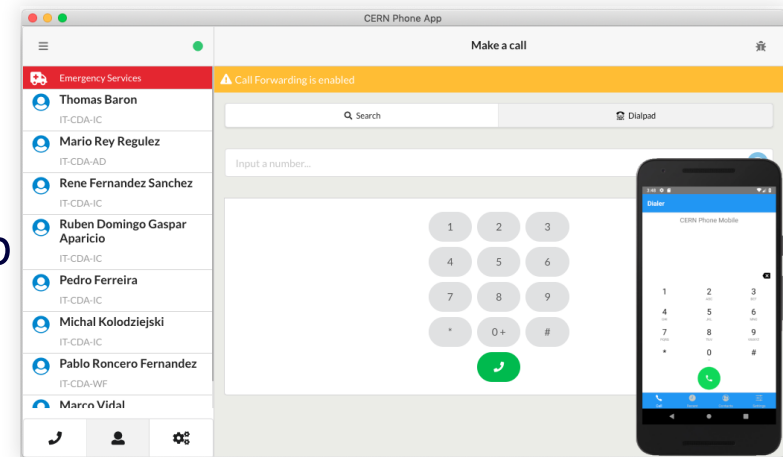

- New mail service based on *Kopano* (<https://kopano.com>)
 - Groupware system (e-mail, calendar, contacts)
 - **FOSS, on premise, no lock-in, can exit anytime**
 - Developed by Kopano BV (Netherlands/Germany)
 - Optional support and maintenance contract
 - Deployed in enterprises of similar scale
- **Validation criteria passed** (functionalities, technical, support)
- Impact on users
 - *Outlook* to be replaced by *Kopano DeskApp/WebApp*
 - No cached mode, need to be online
 - Transparent for all other mail clients
 - *Thunderbird* even gets contacts and calendar support

Telephony

Replacement of *Skype for Business* and analog phones

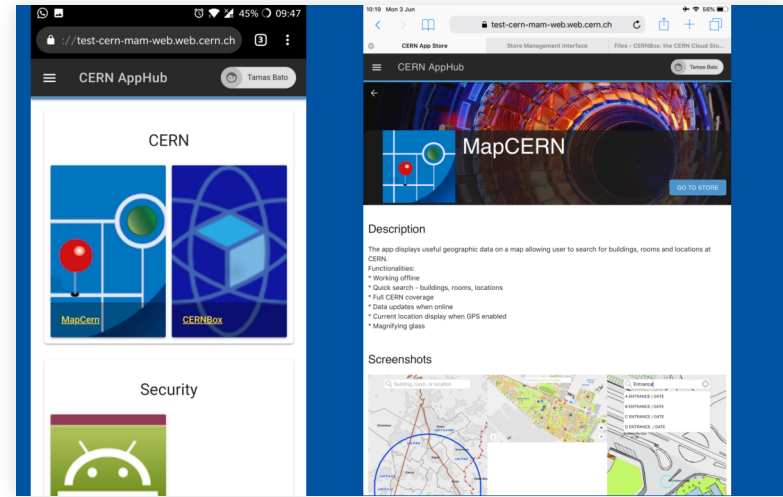

- **Replacing Alcatel PBX by FOSS solution**
 - *Asterisk* (<https://www.asterisk.org>)
 - End of analog phone support
- Developing & deploying "CERN Phone" app (WebRTC-based)
 - All platforms: desktop and mobile versions
 - <https://github.com/cern-phone-apps>
- Impact on users
 - Major change for analog phone users

Devices & Applications

From Managed Devices to Managed Applications

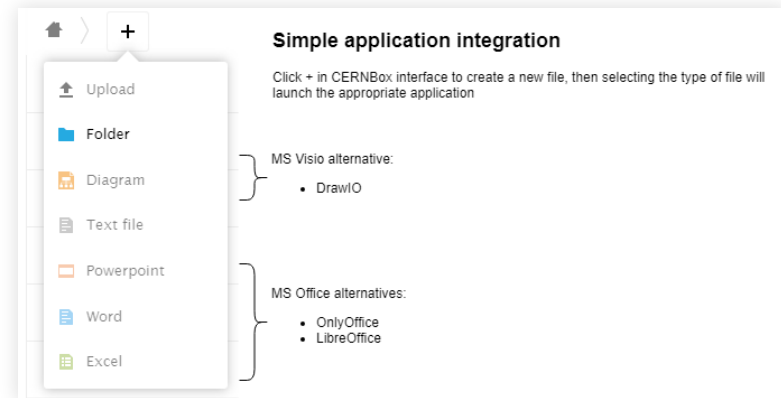

- Reduce managed Windows number to the necessary
 - **Hardened PCs:** Secured, controlled managed PCs
- Offer self-managed Windows PCs
 - *Windows 10* delivered preinstalled, managed by the user
 - Using *Windows Pro OEM* licence instead of *Enterprise* version
- Offer the same app catalogue on all platforms
 - **One stop shop: "CERN AppStore"**
 - Platform independent front-end: deliver apps to *Windows*, but also Mac, SmartPhones...
 - Platform specific package manager

Devices and Applications

Enlarge web applications panel

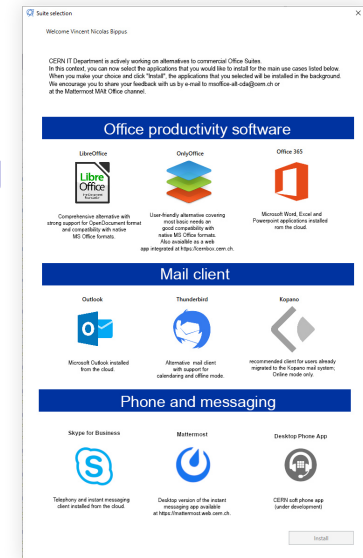

- Offer a web-based applications portfolio à la Google Apps
- Build on top of *OwnCloud* (<https://owncloud.org>)
- Unify home directories on *OwnCloud* ("CERNbox")
 - For *Windows, MacOS, Linux* and SmartPhones
- CERNbox web site to become CERN hub for web apps
 - Offering growing panel of apps for dedicated use cases
 - *Draw.io, Gantt viewer, OnlyOffice, etc.*

Devices & Applications

Objective: Reduce the number of licences by proposing alternatives

- *Office* won't be installed by default on new devices
 - Product selection at installation for *Office* choice
 - *OnlyOffice* (<https://www.onlyoffice.com>) currently being compared with *LibreOffice* (<https://www.libreoffice.org>)
 - *MS Office*
- *Project* alternatives
 - *JIRA* (<https://www.atlassian.com/software/jira>)
 - *Gantt viewer DHTMLX* (<https://dhtmlx.com>)
 - *MS Project* licenses available via special request
- *Visio* alternatives
 - *Draw.io* (<https://www.draw.io>), *MS Visio viewer*
 - *MS Visio* licences available via special request

AuthN & AuthZ

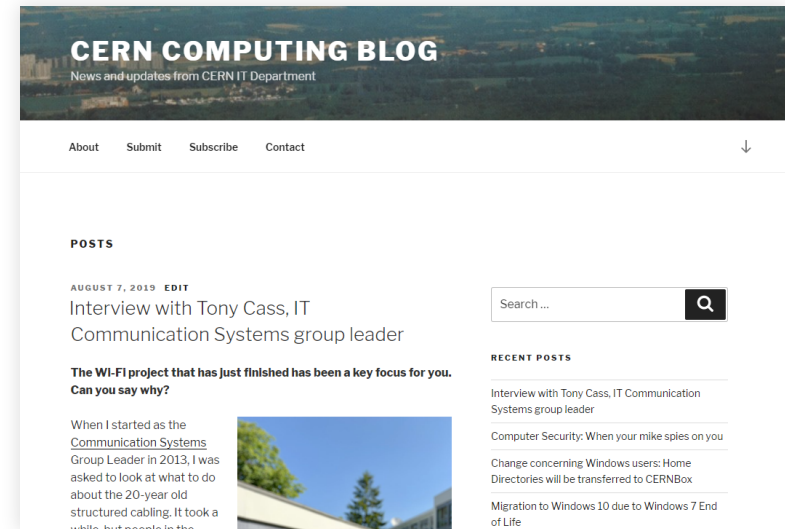

From *ADFS/AD* to *KeyCloak/FreeIPA*

- **New Single Sign-On based on FOSS solution**
 - *KeyCloak* (<https://www.keycloak.org>)
 - Multi-factor support (GAAuth, Yubikey & more)
 - ID federation support
 - External providers support (GitHub, Google, FB...)
 - Programmatic access support (OpenID, OAuth, SAML2)
- **New Kerberos/LDAP service based on FOSS solution**
 - *FreeIPA* (<https://www.freeipa.org>)

Web and content management

From monolytic systems to targeted microservices

- Review of all *SharePoint* sites to suggest alternative options
- **Offer ready-to-deploy templates for targeted services**
 - *Wordpress* (<https://wordpress.org/>) for blogging & info
 - *Discourse* (<https://discourse.org>) as forums solution
 - *Jekyll* (<https://jekyllrb.com>) & *Hugo* (<https://gohugo.io>) for static content management systems
 - Forms, surveys, document collaboration, etc. being evaluated
- Impact on application owners
 - Select the appropriate framework for their use case

Summary

- Mail: Pilot in IT starting now, migration Q4-2019 to end 2020
- Telephony: Pilot in IT starting now, Migration 2020
- Devices and Applications:
 - CERNBox (Owncloud) migration: Pilot since Q4 2018, migration Q4 2019
 - Office choice: in September 2019
 - Project & Visio alternatives: production H1 2019
 - Self-managed devices and CERN AppStore: Pilot Q4 2019, transition in 2020.
- SSO: Prototype and pilots in 2019, transition in 2020
- Web and content management: Pilots H2 2019, more in 2020

Conclusion

- It's not an isolated move
 - It's part of a trend - other vendors are following suit
- We can't avoid it
- We are not alone
- We need everyone's participation
