

Introduction

Caterina Doglioni, Lund University
Graeme A Stewart, CERN EP-SFT

Why this meeting?

First rather informal step to **get to know each other's communities**

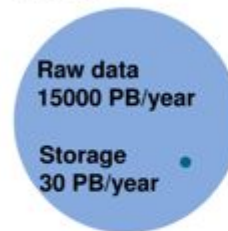

- in the context of the [JENAS meeting](#)

By no means a meeting that includes everyone already, rather a **starting point**

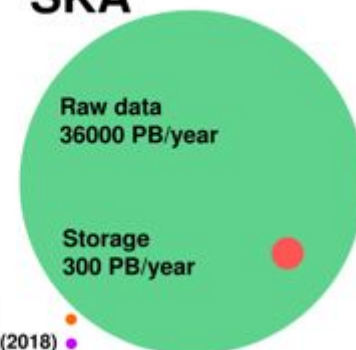

Where we go / what we do next is up to us!

No rush, but data grows fast...

LHCb

SKA

Entire Netflix server capacity (2016) ●
All recent Walmart transaction data (2018) ●

Possible modus operandi & agenda

If there are **common needs** then we could collaborate on **common solutions**

Crucial to **identify common needs first** [see **C. Tunnell's IRIS-HEP talk**],
bottom-up effort

- requires cross-talk, as well as finding a common language
- then can think of working on practical problems

Agenda today:

HEP Software Foundation: what it is and what it has achieved for HEP (=ECFA)

A series of discussion points from the other communities (astroparticle, nuclear, neutrino)

If time allows, we could also brainstorm on what we do next
