0.1	Progress During January	2
0.2	Milestones for current month	3

0.1 PROGRESS DURING JANUARY

In General:

- Spectacle-Editor integration abandoned, it was too complicated, consuming too much time to implement everything from scratch.
- Codebase has good structure now.
- Everything communicates through Redux store.
- Text Component is in a good state (small fixes are still needed).
- Started working on the Image Component.
- Thinking where should I store the images and the app.
- How to store and load presentations:
 - To store: Make some functions that read the Redux store and create a JSON file that describes the presentation.
 - To load: Make some functions that are able to implement the inverse functionality.
- How to export and play presentations:
 - To export: Make some functions that read the Redux store and create a Spectacle project, one index.js file with Spectacle specific React Code and an assets folder with all the images and media files. After pdf-export functionality from Spectacle project will be used.
 - To play: Run the Spectacle Project created during the export.
- Presentation of Slides' App in January's Documentation Project Checkpoint meeting (<https://indico.cern.ch/event/865409/>)
- Technical feedback received, evaluated and rejected, concerning using `<iframe>` or widgets to run a Spectacle Project app inside Slides' App.

0.2 MILESTONES FOR CURRENT MONTH

- Finish Image Uploading functionality.
- Finalize where to store images and how to load them in the presentation.
- Fine tune Text Element functionality.
- Experiment with storing and loading presentations.
