0.1	Progress During February	2
0.2	Milestones for current month	3

0.1 PROGRESS DURING FEBRUARY

In General:

- Fixes in the Text Component.
- Image Component, upload, drag and resize are working.
- Save Presentation in a .slides (zip file).
- Load Existing Presentation.
- Update in the UI of the Application and the Landing Page.
- Images are currently saved in a shared folder, presentation is saved in the user's space (currently only locally).
- All the progress was presented the 18th of February in the Documentation Project Meeting. In this presentation I did a live demo of the application, made a presentation with text and images, saved it and loaded it back successfully. I got important feedback.
- JIRA ticket list updated with the new requirements:
 - Investigate how to make the Text Editor more User Friendly.
 - Change the background of an individual Slide (colour or image).
 - Fullscreen Mode.
 - Export presentation to a .pdf or .html file.
 - Selection of slide types.
- Meetings with CERNBox cloud service storage service managers in order to decide how to integrate the Slides' app in CERNBox.
- In the framework of the Redux store restructuring, introduced Typescript code to clear up and organize better the application state.
- Instead of having two different components Text and Image, I try to unify them into one Item component with two different types for the different attributes of a Text and an Image.

0.2 MILESTONES FOR CURRENT MONTH

- Finish Unifying the Text and Image into Item and deploy the new Redux store.
- Fulfill requirements raised from the feedback I got in the meeting in February.
- Use CERN's CEPH instance to store user's presentations.
- Integrate Slides fully with CERNBox.
